TABLE OF CONTENTS

	PAGE
Part I.—General Analysis of Manufacturing in the Dominion	5
Section 1. <i>Growth of Manufacturing in Canada</i>	7
1. Historical Summary of Statistics of Manufactures for the Dominion, 1870-1941.....	7
2. Summary Statistics of Manufactures, by Provinces, Significant Years, 1917-41.....	8
3. Summary Statistics of Manufactures, by Industrial Groups, Significant Years, 1917-41.....	10
4. Summary Statistics of Manufactures, Significant Years, 1917-41.....	13
5. Consumption of Manufactured Products, by Industrial Groups, 1940, with Totals for 1922-39.....	14
Section 2. <i>Value and Volume of Manufactured Products</i>	14
6. Indexes of the Volume of Manufacturing Production, According to Component Material and Purpose Classifications, Significant Years, 1923-41.....	15
7. Indexes of the Volume of Manufacturing Production for the Groups of the Purpose Classification, Significant Years, 1923-41.....	16
Section 3. <i>Production by Industrial Groups and Individual Industries</i>	16
Subsection 1. Manufactures Grouped by Chief Component Materials.....	16
8. Percentage Variation in Employment, Salaries and Wages, and Gross Value of Products in the Main Industrial Groups Compared for Significant Years, 1929-41.....	17
9. Statistics of the Numbers, Capital, Employees, Salaries and Wages, Power, Fuel, Materials, and Values of Products of Canadian Manufacturing Industries, 1940.....	18
10. Statistics of the Numbers, Capital, Employees, Salaries and Wages, Power, Fuel, Materials, and Values of Products of Canadian Manufacturing Industries, 1941.....	24
Subsection 2. Manufactures Classified by the Purpose of the Products.....	32
11. Principal Statistics of the Manufacturing Industries of Canada, Classified According to the Purpose of the Principal Product, by Main Groups, Significant Years, 1922-40, and in Detail for 1941.....	32
Subsection 3. Manufactures Classified by Origin of the Materials.....	34
12. Principal Statistics of the Manufacturing Industries of Canada, Classified According to the Origin of the Materials Used, by Main Groups, Significant Years, 1924-41.....	35
Subsection 4. Leading Manufacturing Industries.....	37
13. Principal Statistics of the Forty Leading Industries of Canada, Ranked According to the Gross Value of the Products, 1940.....	38
14. Principal Statistics of the Forty Leading Industries of Canada, Ranked According to the Gross Value of the Products, 1941.....	39
Section 4. <i>Principal Factors in Manufacturing Production</i>	40
Subsection 1. Capital Employed.....	40
15. Percentage Distribution of Capital Employed in the Manufacturing Industries of Canada, by Provinces and Industrial Groups, Significant Years, 1917-41.....	40
16. Forms of Capital Employed in the Manufacturing Industries of Canada, by Provinces and Industrial Groups, 1941, with Totals for Significant Years, 1924-40.....	41
Subsection 2. Employment in Manufactures.....	41
17. Salaried Employees and Wage-Earners in the Manufacturing Industries of Canada, with Volume of Manufacturing Production and Comparative Efficiency of Production, 1931-41.....	43
18. Wage-Earners Employed in the Manufacturing Industries of Canada, by Months and Sex, Significant Years, 1922-41.....	
19. Wage-Earners in Manufacturing Working Specified Numbers of Hours per Week in the Month of Highest Employment, 1938-41.....	45
20. Wage-Earners Working Specified Weekly Hours in the Month of Highest Employment, by Sex, Province, and Industrial Group, 1941.....	46
21. Male Wage-Earners in the Forty Leading Industries Working Specified Weekly Hours in the Month of Highest Employment, 1941.....	48
22. Female Wage-Earners in the Forty Leading Industries Working Specified Weekly Hours in the Month of Highest Employment, 1941.....	49
Subsection 3. Salaries and Wages in Canadian Manufacturing Industries.....	50
23. Salaries and Wages Paid in the Manufacturing Industries of Canada, by Provinces and Industrial Groups, 1941, with Totals for Significant Years, 1917-40.....	50
24. Salaries and Wages Paid in the Forty Leading Industries, 1941, with Comparative Figures of Average Salaries and Wages Paid in 1940.....	52
25. Average Annual, Weekly and Hourly Earnings of Male and Female Wage-Earners, 1934-41.....	53
26. Average Annual, Weekly, and Hourly Earnings of Wage-Earners, Classified by Sex, Province and Industrial Group, 1941.....	54
27. The Forty Leading Industries Employing the Greatest Number of Male Wage-Earners, Ranked According to the Average Annual, Weekly and Hourly Earnings, 1941.....	55

TABLE OF CONTENTS—Concluded

	PAGE
Part I.—General Analysis of Manufacturing in the Dominion—concluded.	
28. The Forty Leading Industries Employing the Greatest Number of Female Wage-Earners, Ranked According to the Average Annual, Weekly and Hourly Earnings, 1941.....	56
29. Average Yearly Earnings, and Index Numbers of Earnings, Cost of Living and Real Wages of Wage-Earners, in Manufacturing Industries, 1931-41.....	57
30. Percentages of Salaries and Wages Paid to the Total Net Values of Manufacturing Production, 1924-41.....	58
Subsection 4. Size of Manufacturing Establishments.....	58
31. Manufacturing Establishments Grouped According to Gross Values of Products, with Total and Average Values of Products in each Class, for Canada, 1929, 1939, 1940 and 1941.....	59
32. Establishments and Employees in Canadian Manufactures, Grouped According to the Number of Employees per Establishment, 1929, 1939, 1940 and 1941.....	59
33. Percentage Importance of Establishments, Each Employing 200 or more Persons, in the Twenty-Five Leading Industries, 1941.....	60
34. Principal Statistics of the Twenty-Five Leading Industries, Grouped According to Number of Employees per Establishment, 1941.....	61
Subsection 5. Power and Fuel.....	64
35. Power Equipment Installed in the Manufacturing Industries of Canada, 1931-40, with Details by Provinces and Industrial Groups, 1941.....	65
36. Fuel and Electricity Used in the Manufacturing Industries of Canada, 1931-40 with Details by Provinces and Industrial Groups, 1941.....	67
Part II.—Provincial and Local Distribution of Manufacturing Production.....	68
1. Summary Statistics of Manufactures in Each Province, Classified by Industrial Groups, 1941.....	68
2. Principal Statistics of the Manufacturing Industries of Canada and Each Province, Grouped According to the Number of Employees per Establishment, 1941.....	71
Section 1. The Manufactures of the Maritime Provinces, 1941.....	73
3. Statistics of the Leading Industries of the Maritime Provinces, 1941.....	73
Section 2. The Manufactures of Quebec, 1941.....	74
4. Statistics of the Leading Industries of the Province of Quebec, 1941.....	75
Section 3. The Manufactures of Ontario, 1941.....	76
5. Statistics of the Leading Industries of the Province of Ontario, 1941.....	76
Section 4. The Manufactures of the Prairie Provinces, 1941.....	77
6. Statistics of the Leading Industries of the Prairie Provinces, 1941.....	78
Section 5. The Manufactures of British Columbia, 1941.....	79
7. Statistics of the Leading Industries of British Columbia, 1941.....	79
Section 6. Manufacturing Industries in Cities and Towns.....	80
8. Cities and Towns with a Gross Manufacturing Production of over \$1,000,000 each, Number of Establishments and Total Gross Production in such Cities and Towns as a Percentage of the Grand Total, by Provinces, 1941.....	80
9. Principal Statistics of the Manufacturing Industries of the Six Leading Manufacturing Cities of Canada, 1933-41.....	81
10. Statistics of Manufactures of Municipalities, each with a Gross Production of \$1,000,000 or Over, and with Three or More Establishments, 1941.....	82
11. Principal Statistics by Counties and Census Divisions, 1940.....	85
12. Principal Statistics by Counties and Census Divisions, 1941.....	89

Dominion Statistician: S. A. CUDMORE, M.A. (Oxon.), F.S.S., F.R.S.C.

Chief, General Manufactures Branch: A. COHEN, B. Com.

THE MANUFACTURING INDUSTRIES OF CANADA, 1941

Introduction

This report deals with manufacturing industries in Canada in two main Parts. Part I gives general analyses of manufactures in the Dominion including: the historical development of manufacturing in Canada in so far as statistical data are available; production by industrial groups and individual industries giving a detailed treatment of current production under various groupings and individual industries; general analyses of the principal factors in manufacturing production under such sub-headings as capital, employment, salaries and wages, size of establishment, and power and fuel. Part II deals with the provincial and local distribution of manufacturing production.

With regard to the first section of Part I, dealing with historical development, it has been impossible to compile absolutely comparable statistics over a long period of years. From 1870 to 1915 statistics were collected only in connection with decennial or quinquennial censuses, and there was inevitably some variation in the information collected. The annual Census of Manufactures was instituted in 1917 and, while numerous changes have been made since then in the information collected and the treatment of the data, an effort has been made to carry all major revisions, in so far as possible, back to 1917, so that the figures for the period since then are on a reasonably comparable basis.

The far-reaching influence of the War of 1914-18 was, of course, the outstanding factor in the growth recorded prior to the war now being waged. It was during these years that Canadian manufactures began to develop on a really large scale. Munitions contracts placed by the Imperial Munitions Board of Canada in those years totalled well over \$1,000,000,000 and these did not include such fields of production as ship-building and aviation, which are very important to the present Canadian effort. Ship-building construction alone during the First World War amounted to \$35,000,000 in 1917, \$75,000,000 in 1918 and \$86,000,000 in 1919. In the same three years, employees in the ship-building industry numbered 12,000, 22,000 and 25,000, respectively.

Canada's effort in the present War has brought manufacturing production to a much higher level than ever before. The output of manufactured products in 1941 amounted to \$6,076,308,124 which represents an increase of 75 p.c. over the pre-war year of 1939, and an increase of 56 p.c. compared with the pre-war maximum

attained in 1929. Great though the advance may be, the output of manufactured products has not reached yet the peak, and will increase as the War goes on. According to the latest official statement issued, contracts placed and commitments made for Canadian and British account had reached the enormous total of about \$9,000,000,000 by the end of June, 1943. The War has now entered the fifth year and there can be little doubt that industrial production in Canada is on the threshold of much greater and more diversified development than was thought possible even a few years ago. The present scale of operations and the urgent needs of the Commonwealth and of our Allies has meant a thorough-going transformation in industrial production. Undoubtedly the effects will be far-reaching and will complicate post-war readjustments in industry.

In the Manufactures Chapter of the Canada Year Book 1942 is published an article covering the transition in Canadian industry up to that point. This article will be brought up to date in the 1943-44 edition and as the War progresses the changes will be traced still further. It is hoped that students of Canadian manufacturing will, after the War, be able to obtain a better picture of these modifications than was possible during the First World War. This readjustment of industry from a war-time to a peace-time basis will involve stupendous problems that will require the most complete study of the changes now taking place and their causes.

PART I.—GENERAL ANALYSES OF MANUFACTURING IN THE DOMINION

Section 1.—Growth of Manufacturing in Canada

This section gives a picture of the growth of manufacturing, in general, as shown by comparable principal statistics, i.e., establishments, capital, employees, salaries and wages paid, cost of materials, and values of products. Other useful comparisons are made in Table 4 and figures of consumption are given in Table 5. Tables 6 and 7 show volume comparisons.

1.—Historical Summary of Statistics of Manufactures for the Dominion, 1870-1941

NOTE.—Statistics of the non-ferrous metal smelting industries were included in manufactures for the first time in 1925.

Year	Estab- lish- ments	Capital	Em- ployees	Salaries and Wages	Cost of Materials	Net Value of Products ¹	Gross Value of Products

¹ In accordance with a resolution passed by the Conference of British Commonwealth Statisticians, 1935, the net value of production is now computed by subtracting the cost of fuel and electricity as well as the cost of materials from the gross value of the products. The figures for 1924 and later years have, therefore, been revised in accordance with this resolution. The revision could not be carried farther back as statistics for cost of electricity are not available for years prior to 1924.

² Not reported.

³ A change in the method of computing the number of wage-earners in the years 1925 to 1930, inclusive, increased the number somewhat over that which the method otherwise used would have given. In 1931, however, the method in force prior to 1925 was re-adopted. The figures for 1931 and later years are, therefore, comparable with those for 1924 and earlier years.

Summary Statistics of Manufactures.—The figures in Table 4 trace the tendencies in Canadian manufacturing industries as clearly as possible through the latest period of their development. In analysing statistics of production and materials used, it should be borne in mind that, due to the inflation of values from 1914 through the immediate post-war period and the drop in prices of commodities during the depressions following 1921 and 1930, the figures for these periods are not completely comparable. One very important figure, however, which shows the trend of development clearly, is concerned with the use of power. The total horse-power employed increased from 1,658,475 in 1917 to 5,850,076 in 1941, an increase of about 250 p.c. in 24 years. In the same period, horse-power per wage-earner showed an interrupted trend from 3.06 to 10.82 in 1933 and 9.46 in 1939. With the large increase in the number of wage-earners on war production, and the more efficient utilization of the equipment available, the horse-power per wage-earner dropped to 7.29 in 1941. The significant feature is the increase in both the absolute figures of power employed and the averages per wage-earner during the depression years as compared with 1929, although the large numbers of persons again finding employment since 1933 reduced the averages for the years 1934 to 1937 and again for 1940 and 1941. Other interesting comparisons are the trend of value added by manufacture, per employee, and of average salaries and wages paid since 1929.

Consumption of Manufactured Products.—One of the beneficial results of adopting the same classification for external trade and for production is exhibited in Table 5, where the value of commodities made available for consumption in Canada is derived from these statistics. For example, the value of all manufactured commodities made available in 1940 was \$4,424,000,000, a figure obtained by adding to the value of manufactured products the value of the imports of manufactured and partly manufactured goods and deducting the value of the exports.

In past years there have always been large amounts of manufactured animal, wood and non-ferrous metal products available for consumption in Canada with considerable surplus left for export. Since the commencement of the War, however, it has been necessary to export more and more of such goods to the United Kingdom, and while this has been done mainly by increasing production, Government control of consumption at home is growing stronger as the War advances. In the case of manufactured vegetable products, the figures for 1940 show large excesses of exports over imports for such products as cereal foods (including flour), canned vegetables, etc. Excesses of imports were chiefly confined to cocoa, tea, coffee and preserved fruits and fruit juices, in which cases domestic production cannot be substituted and control of consumption will become more rigid.

On balance, Canada, has in the past, imported large quantities of iron and steel, textiles and non-metallic mineral products in spite of large home production. The urgent requirements for munitions of war have brought about an expansion of the iron and steel, chemical and non-ferrous metals industries that will enable Canada to meet most requirements for home consumption in the future as these industries are adjusted for peace-time needs.

Due to the restrictions on the publication of import and export figures, an analysis of the consumption of manufactured products for 1941 cannot be made.

¹ A change in the method of computing the number of wage-earners in the years 1925 to 1930, inclusive, increased the number somewhat over that which the method otherwise used would have given. There was, therefore, a proportionate reduction in the averages for 1925-30 per employee and wage-earner, as compared with what these averages would have been under the other method. In 1931, however, the method in force prior to 1925 was re-adopted. The figures for 1931 and later years are, therefore, comparable with those for 1924 and earlier years.

² Net values of products, see footnote 1, Table I.

5.—Consumption of Manufactured Products, by Industrial Groups, 1940, with Totals for 1922-39

NOTE.—Due to the restrictions on the publication of import and export figures, statistics on the consumption of manufactured products for 1941 cannot be published.

¹ Imports and exports of manufactured and partly manufactured goods for the years 1922 to 1938 are for the fiscal years ended March 31 of the following years, while for 1939 and 1940 they are for the calendar year. Net imports are total imports less foreign products re-exported.

² For 1928 to 1940 foreign products imported and later re-exported are eliminated from the value of products available for consumption, but for 1927 and previous years this was impossible, since foreign exports for these years had never been analysed as raw materials or partly or fully manufactured goods. Therefore in this table the value of manufactured products made available for consumption, for the years 1922 to 1927, inclusive, is an overstatement by the amount of the foreign exports of manufactured goods in each year, probably varying from about \$11,000,000 in 1922 to \$18,000,000 in 1927.

Section 2.—Value and Volume of Manufactured Products

Value of Manufactured Products.—In the interpretation of manufacturing values over a number of years, variations in the level of prices must be borne in mind, especially when such variations have been as great as those in the period since the annual Census of Manufactures was begun in 1917. The index number of wholesale prices in Canada, on the 1926 base, compiled by the Dominion Bureau of Statistics, stood at 114.3 in 1917, 155.9 in 1920, 97.3 in 1922, 95.6 in 1929, 67.1 in 1933, 84.6 in 1937, 75.3 in 1939 and 90.0 p.c. in 1941. Index numbers of the prices of fully or chiefly manufactured goods were: 113.5 in 1917, 156.5 in 1920, 100.4 in 1922, 93.0 in 1929, 70.2 in 1933, 80.5 in 1937, 75.3 in 1939 and 81.8 p.c. in 1941.

Volume of Manufacturing Production.—Since real income is ultimately measured in goods and services, the growth of the volume of manufacturing production, as distinguished from its value, becomes a matter of great significance. The important thing to know is whether consumers are getting more goods and services, not whether they are expending more dollars and cents.

The index of volume (Table 6) is based on the quantities of manufactured products reported, and covers 71.1 p.c. of the total value of the production in 1926. The industry indexes are weighted according to the values added by manufacture. The indexes for the years 1923-31 are based on the values added in 1926. The weights and products were changed in 1931 and then again in 1936. By changing the weights and products used in the construction of the index every five years, current changes in production are thereby reflected more accurately.

The physical volume of manufacturing production increased 50.2 p.c. from 1923 to 1929. When it is recalled that the population of Canada is estimated to have increased only 11.3 p.c. during the same period, the growth of manufacturing production is indeed remarkable. Of this advance, the part resulting from an increase in the domestic demand due to growth of population would therefore be about 11.3 p.c. Exports of partly and fully manufactured goods increased from \$591,830,000 in the fiscal year ended Mar. 31, 1924, to \$686,876,000 in the fiscal year 1930, the increase in exports representing about 3.6 p.c. of the 1923 production. The remainder of the increase in production by 1929, or a margin equal to roughly 35 p.c. of the volume of manufactures of 1923, was, therefore, apparently absorbed by increases in capital equipment and by the rise in the standard of living of the population of Canada.

A similar analysis of the volume of manufactures since 1929 in relation to population and exports would show that the decline in the depression preceding the present War was due chiefly to reduced exports and a cessation in production of capital equipment. As a result of the expansion in production resulting from the demands created by the War, the physical volume of production increased by 46.7 p.c. since 1939 and by 53.7 p.c. since 1929. The iron and its products group, with an increase of 113.1 p.c., reported the greatest expansion in output. This was followed by chemicals and allied products with an increase of 101.7 p.c., non-ferrous metals products 48.9 p.c., miscellaneous industries 42.2 p.c., non-metallic mineral products 41.6 p.c., textiles and textile products 36.4 p.c., animal products 28.9 p.c., vegetable products 25.9 p.c., and wood and paper products 25.8 p.c.

6.—Indexes of the Volume of Manufacturing Production, According to Component Material and Purpose Classifications, Significant Years, 1923-41

(1935-39=100)

Section 3.—Production by Industrial Groups and Individual Industries

For the purposes of the Census of Manufactures, the main detailed analysis is made under a classification in which industries are grouped according to the chief component materials of the goods manufactured. This is, therefore, the grouping used in Table 9, where the statistics of individual industries are presented in detail, and in the historical series shown in Table 3. However, there are also less detailed analyses under purpose groupings given in Table 10 and under origin groupings in Table 11.

Subsection 1.—Manufactures Grouped by Chief Component Materials

A classification based on the chief component materials in the various products of each manufacturing establishment was applied for the first time in the compilation of the returns for 1920. The number of groups was reduced from fifteen to nine to correspond with the external trade classification and the classes of industry were somewhat altered to conform with recent industrial developments. Subsequently, a number of minor changes were made, the most important being the elimination of central electric stations and the dyeing, cleaning and laundry industry from the compilation in 1936. Revisions due to these changes have been carried back to 1917 in so far as possible.

Recent Changes in Manufacturing Production.—Table 8 shows the effects of the depression, the recovery since 1933, and the impact of the present War upon the main groups of industries with regard to the numbers employed, the salaries and wages paid, and the gross value of products. Owing to the price decline during the depression, money values of both wages and of products were naturally affected more than the number of employees. Furthermore, during periods of curtailed production there is a tendency for wage-earners to be put on part time, while the number of salaried employees responds less quickly to reduction in output than that of wage-earners. Therefore, there are a number of reasons why the variation in the number of employees should be less than that of money values. The figures of Table 8 are to be compared with those of Table 6 which show changes in volume of production. Compared with 1939, the number of employees in 1941 increased by 46.1 p.c. as compared with an increase of 46.7 p.c. in the physical volume of production. Salaries and wages paid were 71.4 p.c. higher and the gross value of production 74.9 p.c. higher. Another significant change is the increase in the proportion of women engaged in manufacturing. Whereas in 1939, there were 281 females to every 1,000 males employed, in 1941 this figure jumped to 292.

8.—Percentage Variation in Employment, Salaries and Wages, and Gross Value of Products in the Main Industrial Groups Compared for Significant Years, 1929-41

NOTE.—The highest pre-depression year was 1929, while the lowest depression year was 1933

Detailed Statistics by Groups and Individual Industries.—Tables 9 and 10 present for the years 1940 and 1941, respectively, detailed statistics regarding the individual industries under which all industrial plants in the Dominion are classified. The industries are further assembled under nine main groups according to the principal component material of their products.

The incidence of the War resulted in a rearrangement in the rank of many industries. Industries producing supplies and equipment for the Armed Forces naturally advanced while those industries producing for the domestic consumers' market declined in importance. To supply the raw materials needed by the industries engaged principally in war production, it became necessary to restrict or prohibit the manufacture of many products such as pleasure cars, radios, washing machines, electrical equipment, household appliances, agricultural implements, etc. Though these industries were forced to change over to war-time production, the changes did not affect the value of their output and consequently their importance

Materials, and Values of Products of Canadian Manufacturing Industries, 1941—con.

as producers of manufactured goods did not alter drastically. To analyse the effects of the War on any industry, it is necessary to compare the nature of the products made before the War with that of the present. This should be borne in mind in making industrial comparisons with pre-war years. For example, the number of employees engaged in the agricultural implements industry increased by 1,947 in 1941; this in spite of the fact that the output of agricultural implements remained at about the same level. The increase was due to a change-over of some of the plants to war production. It is therefore impossible to trace industrial trends from the principal statistics alone, as published in this report.

Subsection 2.—Manufactures Classified by the Purpose of the Products

Significant changes have occurred since 1922 in the importance of the various groups shown in the purpose classification. Indicative of the increasing industrialization of the Dominion is the increase in the industrial equipment group and the increase in producers materials during the period. Another significant change is the decline in the food group. Whereas in 1922 food products comprised the leading group, in 1941 the production of producers materials took the lead by a wide margin. It should also be noted, however, that the cost of materials in this group is particularly high.

11.—Principal Statistics of the Manufacturing Industries of Canada, Classified According to the Purpose of the Principal Product, by Main Groups, Representative Years 1922-1940, and in Detail for 1941

¹ For the year 1922 the figures for "Cost of Materials" and "Gross Value of Products" include the value placed on intermediate products used in further processes in the chemical group of industries. For this reason these figures differ slightly from those contained in the other tables of this report.

11.—Principal Statistics of the Manufacturing Industries of Canada, Classified According to the Purpose of the Principal Product, by Main Groups, Significant Years 1922-40, and in Detail for 1941—con.

Subsection 3.—Manufactures Classified by Origin of the Materials

The distinction made between farm materials of Canadian and foreign origin is based on whether the materials are indigenous to Canada rather than on their actual source. Thus, the industries included in the foreign origin classes are those depending upon materials that cannot be grown in Canada, such as tea, coffee, spices, cane sugar, rice, rubber, cotton, etc. Industries included in the Canadian origin classes may be using large quantities of imported materials, however.

The mineral origin group includes, in addition to the non-ferrous metals, so largely produced in Canada, the manufactures of iron and steel, of petroleum, and of other mineral substances, the raw materials for which are very largely imported. Products of mineral origin, with the exception of fuels, are nearly all durable goods. A high standard of living and advanced industrial organization is usually indicated by a relatively large production and consumption of mineral products. During periods of depression when the production of capital goods is curtailed, employment in the industries of the farm group, which produce mainly consumers goods, exceeds that of the mineral group. In 1941 the industries of the mineral group had by far

the greatest capital investment, employed the largest number of persons and paid out the highest amount in salaries and wages, the average capital per employee was \$5,766 and average salaries and wages \$1,551. For the industries of the farm origin group the respective averages were \$4,302 and \$1,103.

¹ For the year 1924 the figures for "Cost of Materials" and "Gross Value of Products" include the value placed on intermediate products used in further processes in the chemical group of industries. For this reason these figures differ slightly from those contained in the other tables of this report.

Subsection 4.—Leading Manufacturing Industries

In the following statement, the rank of the ten leading industries in 1941, from the standpoint of gross value of production, is compared with their respective ranks in significant years since 1922.

THE TEN LEADING INDUSTRIES, 1941 COMPARED AS TO RANK, SIGNIFICANT YEARS 1922-41

Industry	Rank in							
	1941	1940	1939	1937	1933	1929	1926	1922
Non-ferrous metal smelting and refining.....	1	1	1	1	2	9	9	-
Pulp and paper.....	2	2	2	2	1	1	1	2
Slaughtering and meat packing.....	3	3	3	3	3	2	3	3
Automobiles.....	4	4	5	4	11	4	5	6
Butter and cheese.....	5	5	4	6	5	6	6	5
Electrical apparatus and supplies.....	6	7	9	8	16	8	13	17
Primary iron and steel.....	7	10	11	12	31	16	25	20
Sawmills.....	8	6	8	7	14	5	4	4
Petroleum products.....	9	9	6	9	6	10	11	9
Flour and feed mills.....	10	8	7	5	4	3	2	1

A prominent feature of Canadian manufacturing development in recent years has been the rapid growth of non-ferrous metal smelting. This industry, based upon the rich base metal resources of the country, has now taken its place among the leading manufactures along with the industries based upon forest, agricultural and live-stock resources. The incidence of the depression resulted in a re-arrangement in the ranking of many industries; in some cases this has proved to be temporary. Under the impetus of war production, the industries engaged in producing the equipment needed by the Armed Forces, such as electrical apparatus, automobiles, sawmills, and primary iron and steel, advanced to higher positions.

13.—Principal Statistics of the Forty Leading Industries of Canada, Ranked According to Gross Value of Products, 1940

Industry	Estab- lish- ments No.	Capital \$	Em- ployees No.	Salaries and Wages \$	Cost of Materials \$	Value of Products	
						Net \$	Gross \$
1 Non-ferrous metal smelting and refining.....	14	234,826,742	13,466	21,766,197	187,790,596	98,059,288	305,360,547

¹ On a broader classification basis, the primary textile industry, which includes the production of cottons, woollens, silk, hosiery and knitted goods, and the dyeing and finishing of textiles, ranks first in number of employees and salaries and wages paid and second in gross value of production.

Section 4.—Principal Factors in Manufacturing Production

The subjects treated under this Section, in as much detail as limitations of space permit, include capital, employment, salaries and wages, size of establishments and power and fuel used in manufacturing.

Subsection 1.—Capital Employed

The remarkable increase in capital employed in Canadian manufactures from the beginning of the twentieth century has, of course, run parallel with the rapid growth in industrial operations. From 1900 to 1905 the capital increased from \$446,900,000 to \$833 900,000, and advanced to \$1,958,700,000 in 1915. During this period returns were received from establishments with 5 hands or over, and, while the rise in wholesale prices did not exceed 37 p.c., the capital employed in manufactures increased nearly 340 p.c.

The capital investment in 1941 in all establishments, irrespective of the number of employees, but exclusive of central electric stations, was \$4,906,000,000 as compared with \$2,334,000,000 in 1917, an increase of 110 p.c. while wholesale prices have declined about 21 p.c. in the same period.

Subsection 2.—Employment in Manufactures

Using a base and taking the percentages of the wage-earners and the total employees in each year, and dividing these percentages into the corresponding volumes of manufacturing production (see p. 15 for the index of volume), tentative conclusions are arrived at regarding the efficiency of production per wage-earner and per employee. These indexes of the efficiency of production are, of course,

FACTORS IN MANUFACTURING PRODUCTION

affected by the changes in the method of computing the number of wage-earners adopted in 1925, and then again in 1931. Inasmuch as the change increased the apparent number of employees between 1925 and 1930, it proportionately decreased the index of the efficiency of production. Comparability exists, however, between the figures prior to 1926 and subsequent to 1930. Table 17 shows only the latter period. Unfortunately, the period covered is rather limited for the purpose in view, but it is suggested that the reader compare these data with the comparable figures for 1917-30 at p. 421 of the 1939 Canada Year Book. The indexes may be considered as supplying satisfactory evidence of a general gain in volume of production per person employed.

17.—Salaried Employees and Wage-Earners in Manufacturing Industries, with Volume of Manufacturing Production and Comparative Efficiency of Production, 1931-41

NOTE.—Figures, with qualifications as to comparability, for 1917 to 1930 are published at p. 421 of the 1939 Canada Year Book.

(1935-39=100)

Year	Salaried Employees	Wage-Earners	Total Employees	Percentages Relative to 1935-39		Index Number of Volume of Mfd. Products	Indexes of Efficiency of Production

Monthly Record of Employment in Manufactures.—Ordinarily, manufacturing employment in Canada reaches its highest point during the summer months. Some of the seasonal industries, such as canning, are most active then, textile industries are preparing winter goods, and industry generally feels the active demand of the agricultural purchasing power resulting from the prospects of the season's harvest. After the setback of 1929, employment in 1930, 1931, 1932 and the first half of 1933 declined steadily, the monthly employment figures in each case being lower than the corresponding month of the previous year. The peak of employment in June, 1929, when 575,693 wage-earners were on the payrolls, was surpassed in September, 1937, with 582,305 wage-earners. With the outbreak of war the improvement in employment became increasingly rapid. A new high record was attained in September, 1941, when 861,774 wage-earners were employed, an increase of 53 p.c. over the same month in 1939.

Hours Worked by Wage-Earners.—From 1932, the first year for which figures on hours worked per week by wage-earners are available, to 1941, each firm was required to report the number of hours worked by all its wage-earners during the month in which the greatest number had been employed, the only exception being the years 1938 and 1939 when one week in a month of normal employment was reported. In 1938 the number of hours worked per week were broken down by sex, and a change was also made in the breakdown of the weekly hours worked. Since 1940 the hours worked per week include overtime while prior to that overtime was excluded. These changes make it impossible to measure accurately the changes in the number of hours worked per week. In any case, the figures in Tables 19 to 22 do not refer to any particular month, since the month of highest employment might be May for one firm and October for another; they represent the summation of the different months of highest employment as reported by all firms. For a given industry, however, the month of highest employment is more significant as in this case it coincides for a great number of firms engaged in the same industry.

For all wage-earners, the hours worked per week declined from 48.9 in 1932 to 47.2 in 1939, then rose sharply to 50.5 in 1941, some of this increase no doubt being due to the inclusion of overtime. Female wage-earners in 1941 worked an average 4.4 hours per week less than their male co-workers.

19.—Wage-Earners in Manufacturing, Working Specified Numbers of Hours¹ per Week in the Month of Highest Employment, 1938-41

NOTE.—For hours worked per week in 1932-37, see Canada Year Book, 1942, p. 386.

Subsection 3.—Salaries and Wages in Canadian Manufacturing Industries

In 1941 the 26,293 establishments covered employed 158,944 salaried employees and 802,234 wage-earners, a total of 961,178 persons. Out of every 1,000 persons employed in manufacturing, 163 were classed as salary earners and 837 as wage-earners; the former earned 22.6 p.c. and the latter 77.4 p.c. of the total amount paid out as remuneration for services.

The percentages of salaries are usually relatively high in both Ontario and Quebec as compared with the other provinces. Ontario had a larger proportion of females among its salaried employees than the other provinces. The same situation prevails in Quebec with regard to wage-earners, due, no doubt, to the textile industries of the province. The importance of the textile industries in providing employment to females is strikingly illustrated by the fact that of all female wage-earners engaged in the manufacturing industries of Canada, 44.9 p.c. were found in the textile group.

The average salary in 1941 amounted to \$1,801 which was \$55 or 3.2 p.c. higher than in 1939. Salaried employees in Ontario with \$1,898 received the highest salary. British Columbia came second with \$1,854 and Quebec third with \$1,736. The head offices of many large corporations being located in Montreal, Toronto, Vancouver and Winnipeg tend to raise the average salaries in the provinces in which these cities are located.

The average wage in 1941 amounted to \$1,220 which was \$245 or 25.1 p.c. higher than in 1939. Manufacturing industries in British Columbia paid the highest average wages of \$1,359, followed by Ontario with \$1,309, Manitoba \$1,181, Alberta \$1,118, Quebec \$1,103, etc. The high figures shown for Yukon and the Northwest

¹ The averages of wage-earners and earnings for the years 1931 to 1941 are strictly comparable with those for the years up to 1925 but not with those for the intervening years. The figures for the latest years—as for the earliest—represent the earnings for complete man-years of work, with no allowance for periods of unemployment. The difference amounts only to about 3 or 4 p.c. in the total figures and affects chiefly the seasonal industries.

² The increase in the number of salaried employees in 1931 is due to the following changes in method: (1) Prior to 1931 working proprietors, such as bakers, sawmill operators, small clothing manufacturers, etc. were required to report themselves as wage-earners. In 1931 and subsequent years, however, all such proprietors reported themselves as salaried employees. (2) In 1931 travelling salesmen who were attached to the plant, and devoted all or the greater part of their time to selling the products of that plant, were included with salaried employees. Prior to this they were not reported at all.

³ For a break-down of annual earnings of wage-earners, by sex, see Table 26.

Territories in regard to average wages are due to the unusual conditions under which industry is carried on in these regions and are not representative. Statistics on the distribution of employees by provinces and groups as well as average annual earnings are given in Table 23, and for a break-down of annual earnings of wage-earners, by sex, see Table 26.

Average Annual Earnings in the Forty Leading Industries.—In only three industries did the average salary exceed \$2,500 in 1941: petroleum products, breweries and pulp and paper. In eleven they ranged between \$2,000 and \$2,500, in twenty they averaged \$1,500 to \$2,000, and in the remaining six they were below \$1,500. The lowest salaries were reported by the sawmilling and butter and cheese industries each of which includes a large proportion of small establishments.

The highest wages, those above \$1,600, were paid in seven industries, in all of which the proportion of skilled workers is high and the proportion of female workers is low. The automobile industry with \$1,963 was the highest in this group, and railway rolling-stock, with \$1,615, the lowest. In nine other industries average wages ranged between \$1,400 to \$1,600 in all of which the proportion of female workers is low. In twelve other industries average wages ranged between \$1,000 and \$1,400, while in the remaining twelve they were below \$1,000. This last group includes industries made up of a large number of small establishments and in which the proportion of female workers is high. Employment by sex and average annual earnings in the forty leading industries is given in Table 24, and annual earnings by sex in Tables 27 and 28.

24.—Salaries and Wages Paid in the Forty Leading Industries, 1941, with Comparative Figures of Average Salaries and Wages Paid in 1940

NOTE.—Industries ranked according to the aggregate salaries and wages paid. For a break down of annual earnings of wage-earners, by sex, see Tables 27 and 28.

Average Annual, Weekly and Hourly Earnings.—In comparing earnings by provinces or groups, consideration should be given to the type of industries in each case since the distribution of industries has very definitely a regional significance. In some industries a labour force possessing deftness and speed, in others the ability to exercise muscular strength is necessary; in others again the labour force must exercise craftsmanship or possess a high degree of technical knowledge. Workers in these latter industries naturally command relatively higher wages than those employed in industries whose employees are routine workers.

The ranking of provinces and industries as regards annual earnings is in many cases different to that of weekly or hourly earnings since the factors of number of weeks worked per year and number of hours worked per week enter into the picture. So that, while in general the same observations apply, a close study of the differences between the averages shown in Tables 23 and 24 will be of value to the student.

Comparing 1941 with 1939, average annual earnings of male wage-earners increased by 26 p.c., weekly earnings 25 p.c., and hourly earnings 16 p.c. For female wage-earners the increases were 19, 18 and 13 p.c., respectively.

25.—Average Annual, Weekly and Hourly Earnings of Male and Female Wage-Earners, 1934-41

Year	Average Earnings			Hours Worked per Week
	Annual	Weekly	Hourly	
MALE				
	\$	\$	\$	No.
1934.....	930	20·31	0·407	49·91
1935.....	966	20·41	0·413	49·41
1936.....	995	20·92	0·423	49·41
1938.....	1,055	21·49	0·454	47·3
1939.....	1,076	22·23	0·462	48·1
1940.....	1,202	24·83	0·488	50·9
1941.....	1,355	27·72	0·538	51·5
FEMALE				
1934.....	539	11·80	0·251	46·91
1935.....	570	12·04	0·259	46·51
1936.....	577	12·20	0·262	46·51
1938.....	594	12·10	0·271	44·6
1939.....	619	12·78	0·283	45·2
1940.....	655	13·52	0·286	47·3
1941.....	736	15·05	0·320	47·1

¹ Estimated on the basis of hours worked by female wage-earners in 1938 and 1939 as compared with those worked by male wage-earners in those years.

Real Earnings of Employees in Recent Years.—When the index number representing the average yearly wages is divided by the index number of the cost of living, on the same base, a measure of "real" wages is obtained. Index numbers for 1931 to 1941 are given in Table 29. In 1933, the height of the depression, real wages were 88.3 on the 1935-39 base. From then on they rose steadily and stood at 117.2 in 1941, an increase of about 33 p.c.

29.—Average Yearly Earnings, and Index Numbers of Earnings, Cost of Living and Real Wages of Wage-Earners, in Manufacturing Industries, 1931-41

NOTE.—Figures on the 1917 base, with qualifications as to comparability, for 1917 to 1930 are published at p. 421 of the 1939 Canada Year Book.

Year	Wages Paid	Average Wage-Earners	Average Yearly Earnings	Index Numbers (1935-39=100)

Percentages of Salaries and Wages to Net Value of Products.—Table 30 shows the relation between salaries and wages paid by manufacturers and the total net value of production. Figures of gross production are often used in such calculations, but the values out of which the wages of employees must come in the long run are the values added to the raw materials while they are in the factory. Such added values constitute the real production of the manufacturing plant and are alone available for payment of salaries and wages, interest, rent and taxes, repairs, and all other overhead charges that ordinarily must be met. The percentage declined steadily with the increasing manufacturing production from 1924 to 1929, while from 1931 to 1935 and again in 1938 and 1939, due to decreased industrial activity, the percentage of salaries to value added was abnormally high. It should be borne in mind, however, that salaried employees increased 127.0 p.c. during the period 1924-41 while wage-earners increased but 92.1 p.c. The percentage of wages has fluctuated much less than that of salaries. The number of wage-earning employees may be more rapidly adjusted to the activity of the industry and wage levels likewise may be more readily adjusted to the price levels of the products.

30. —Percentages of Salaries and Wages Paid to the Total Net Values of Manufacturing Production, 1924-41

¹ Equivalent to "net value of products"; see footnote 1, Table 1, p. 7

Subsection 4.—Size of Manufacturing Establishments

The size of the manufacturing establishment is generally measured either by the value of product, or by the number of employees, but each of these methods has its limitations. The latter takes no account of the differences in capital equipment at different times or in various industries and obviously the increased use of machinery, as in the flour-milling industry, may lead to an increase in production concurrently with a decrease in the number of employees. The former measure has to be adjusted for changes in the price level; and, as between industries, it makes those in which the cost of raw materials is relatively high, appear to operate on a larger scale.

Size as measured by Gross Value of Products.—While in 1922 the 420 establishments each producing over \$1,000,000 had an aggregate value of products of \$1,268,056,129 or 51 p.c. of the total production of all manufacturing industries, the 719 establishments producing over \$1,000,000 each in 1929 had an aggregate value of products of \$2,516,064,954, or 62 p.c. of the grand total for all manufacturing establishments—a very significant change in the short period of eight years. In 1931, however, the number of plants with a production of over \$1,000,000 dropped again to 482, their output being valued at \$1,451,658,954 or 53 p.c. of the total. With the increased production resulting from war needs, the number of plants with a production of \$1,000,000 or over jumped to 1,052 in 1941 and their output was about 70 p.c. of the total value of manufactures.

¹ Includes the production of central electric stations and the dyeing, cleaning and laundry industry
² Exclusive of Yukon and Northwest Territories.

Size of Establishments as Measured by Number of Employees.—In 1923, establishments employing 501 hands or over accounted for 21·4 p.c. of the total number of employees engaged in manufacturing. By 1929 the proportion had increased to 27·3 p.c. of the total, thereby showing the increasing concentration of production into larger units. This tendency, however, was checked by the depression, the percentage having dropped in 1933 to 20·5 p.c. (central electric stations included). With the recovery in production since 1933 the percentage has risen again and in 1941 stood at 38·3 p.c. The same also holds true for all establishments employing 101 hands or over. In 1923 they employed 58·6 p.c. of the total, in 1929, 61·9 p.c., in 1933, 55·7 p.c., and in 1941, 70·0 p.c.

Size of Establishment in Leading Industries.—Table 33 summarizes the degree of concentration in some of the leading industries of Canada. This concentration is analysed in detail for each of these twenty-five industries in Table 34. Concentration is extremely marked in the case of automobiles, railway rolling-stock, aircraft, cotton yarn and cloth, shipbuilding and repairs, miscellaneous chemical products, non-ferrous metal smelting and refining, and pulp and paper; whereas in the case of bread and other bakery products, women's factory clothing, butter and cheese, and sawmills, the degree of concentration is low. With regard to flour and feed mills, concentration is high in the case of flour mills, but the small size of the average feed mill offsets this for the industry as a whole.

33.—Percentage Importance of Establishments, each Employing 200 or More Persons in the Twenty-Five Leading Industries, 1941

Subsection 5.—Power and Fuel

Power.—Power equipment installed in manufacturing establishments is a very good barometer of the industrial development of Canada, inasmuch as production is increasingly dependent on power equipment. Increases and decreases in productive capacity, measured in horse-power, are not the result of temporary fluctuations in costs and values in the same manner as capital investments, values of products, etc. Of course, power equipment installed is not a measure of the actual utilization of power for there is generally an excess over actual requirements, i.e., over power equipment in operation. Producers must have an installed operating margin in excess of normal requirements to provide for booming business conditions or break-down of part of the plant; in times of depression this margin increases. Then, too, the practice in factories, etc., of installing individual motors to each machine in place of large central motors increases total installed capacity. If spare

or idle machinery could be deducted from total installation over a long period of time, the resultant data would be more informative. Reports of such spare or idle equipment are available, however, only since 1934, and for the seven years 1935-41 the percentage of equipment not in regular use has been approximately the same each year, viz., about 6 p.c. Power equipment figures, unless such deductions can be made over a long term, will not reflect temporary depressions.

Electric motors in the manufacturing industries operated by purchased power are included with primary power equipment and consequently the central electric stations producing the power are not included as manufacturing industries. Electric motors operated by power generated within these industries are not included in Table 35 with the primary power equipment that produces the power to operate them but they are shown separately, together with the total of all electric motors

for each year. These totals indicate the rate of growth of electric drive in these industries in Canada, which has increased from 61·3 p.c. of the total power equipment in 1923 to 81·5 p.c. in 1941.

Of the total increase in power equipment employed in manufacturing industries since 1923, over 90 p.c. was in electric motors operated on power purchased from central electric stations. However, some sections of Canada are not well provided with water power and in such sections primary power derived from steam engines or turbines, and internal combustion engines—which include all gasoline engines, gas engines (natural, coal, and producer gas), and compression-ignition engines—has also increased rapidly during the period covered. During the period 1923–41 there was an increase of 24 p.c. in the capacity of water wheels, 66 p.c. in the capacity of steam engines, while the capacity of electric motors and internal combustion engines more than quadrupled during the same period.

In the Provinces of Prince Edward Island, Nova Scotia, New Brunswick, Saskatchewan, and Alberta, primary power produced from fuels is an important factor in power utilization.

Fuel and Electricity.—Fuel is used quite generally throughout the industrial field for the generation of power by means of steam and internal combustion engines. It is also used for the heating of plants, and for providing the heat necessary to some manufacturing processes. The most important industries where heat is applied to the materials to facilitate or accomplish the desired transformation are foundries and machine shops, brick, tile, lime, and cement making, petroleum refining, the glass industry, distilleries, food preparation, rubber goods, etc. Fuel used for such heating purposes, as well as for power, is included in the figures of Table 36. In addition to the electricity used for ordinary power purposes, the figures include also the electricity used for heating boilers in the pulp and paper industry. Consumption of surplus energy in electric boilers increased rapidly during the years preceding the present war.

The figures of the table do not include coke charged to iron-blast furnaces or foundry cupolas. Neither do they include fuels that constitute the raw materials to be transformed as coal in the coke and gas industries and crude petroleum in the refining industry.

The value of fuel consumed increased 91 p.c. from 1924 to 1941. Electricity, on the other hand, has increased during the same period by 283 p.c., although there has been a decline in the average unit cost of electricity as there has been in the case of fuels.

The groups of industries in which fuel was most extensively used in 1941 were: wood and paper products, non-metallic mineral products, iron and its products, and non-ferrous metals.

Quebec is the largest user of electric power, using 47 p.c. of the Dominion total in 1941.

¹ Includes gasoline and kerosene.
² Includes fuel and electricity used in smelters for metallurgical purposes.

PART II.—PROVINCIAL AND LOCAL DISTRIBUTION OF MANUFACTURING PRODUCTION

This part of the report is introduced by a general analysis of the concentration of the manufacturing industries in the provinces. In the sections that follow, the principal features of the manufactures of each province are brought out and finally the distribution of manufacturing throughout the principal cities and towns of the Dominion is shown.

Ontario and Quebec are by far the most important manufacturing provinces of Canada. Their combined production in 1941 amounted to \$4,963,000,000 or over 81 p.c. of the gross value of manufactured products of the Dominion. The proximity of Ontario to the coalfields of Pennsylvania, the water power and other varied resources of the two provinces, and their nearness to the larger markets of Canada and the United States have all contributed to the above result.

Table 1 shows the outstanding predominance of Ontario and Quebec in each industrial group. Quebec leads in the manufacture of textiles, but in each of the other groups Ontario has the greater production. The standing of these two provinces is most nearly approached by British Columbia in the case of the wood and paper products group, where the latter province accounts for 16.8 p.c. of the gross production compared with 37.4 p.c. for Ontario and 33.3 p.c. for Quebec; in each of the other groups the positions of Ontario and Quebec lead by a wide margin. In previous reports Table 1 has shown the value of production in each province, by industry. With the establishment of many vital war plants throughout Canada, it is not now possible to publish this detail, and the provincial distribution by groups instead of by industries is now given. In this way the publication of figures relating to individual establishments has, in many cases, been avoided.

¹ Less than three establishments.² Includes non-ferrous metal products.

Table 2 analyses the principal manufacturing statistics in each province, by size of establishment. Ontario with 155 plants employing 500 or more persons had the largest number of such establishments of any province. Quebec was second with 112 and British Columbia third with 15. The degree of concentration of manufacturing production in large units is illustrated in the statement below. In the province of Quebec, 43.5 p.c. of all persons engaged in manufacturing were employed in establishments having 500 or more employees, as compared with 38.3 p.c. for Canada as a whole. In Ontario this percentage was 39.9, in British Columbia 27.9, New Brunswick 27.7, Manitoba 25.8, Nova Scotia 20.5, and Alberta 11.8. Prince Edward Island and Saskatchewan had no establishments employing over 500 persons.

CONCENTRATION OF MANUFACTURING PRODUCTION IN EACH PROVINCE, 1941

Province	Number of Establishments Employing 500 or More Persons	Percentage of Total Number of Establishments in Province	Provincial Percentage of Number of Employees Accounted for by these Establishments

Section 1.—The Manufactures of the Maritime Provinces, 1941

In Prince Edward Island the predominant agricultural and fishery resources make butter and cheese, fish curing and packing, and slaughtering and meat packing the leading manufactures of the Province. Printing and publishing is also an important industry in this Province. Nova Scotia is renowned for its coal mines and its fisheries, but it has also extensive forests and agricultural lands and is favoured with easy access by sea to the high-grade iron-ore supply of Newfoundland. On these resources are based the leading manufactures of primary iron and steel, fish-curing and packing, shipbuilding and repairs, sawmills, pulp and paper, and butter and cheese. The forests of New Brunswick give a leading place to its pulp and paper and sawmilling industries, although manufactures of fish and agricultural products add to the varied output of the Province.

¹ Net value is derived from gross value by deducting cost of materials, fuel, and electricity.

² Individual statistics cannot be given because there are fewer than three establishments in each industry. Such industries are: in Prince Edward Island, cotton and jute bags, slaughtering and meat packing, fertilizers, and sheet-metal products; in Nova Scotia, sugar refineries, cotton yarn and cloth, wire and wire goods, coke and gas, and petroleum products; in New Brunswick, sugar refineries, railway rolling-stock, and shipbuilding.

Section 2.—The Manufactures of Quebec, 1941

Among the assets of Quebec that have tended to develop manufacturing industries in the Province may be mentioned its natural resources of forests, water powers, minerals, and agricultural lands, and also its geographic position astride the St. Lawrence estuary permitting sea-going shipping to reach its main centres of population. Added to these natural advantages, there is a stable and industrious population, which is an important factor in industries such as textiles, clothing, boots and shoes, etc., where a large labour force is required.

The most notable change among the manufactures of Quebec in recent years has been the development of the non-ferrous metal smelting industry. This industry first appeared among the forty leading industries of the Province in nineteenth place in 1927; it has been in second place since 1935. The petroleum-refining industry has also expanded and risen in importance during the same period; it was in twenty-sixth place in 1927 and eleventh in 1941.

Quebec with about 30 p.c. of the Dominion output is the second largest manufacturing province. The production of pulp and paper is the dominant industry. In addition to supplying about 9 p.c. of the gross value of Quebec manufactures, it furnishes about 50 p.c. of the Dominion total for this industry. The value of tobacco products forms approximately 87 p.c., cotton yarn and cloth 72 p.c., women's factory clothing, 68 p.c., leather boots and shoes 61 p.c., men's factory clothing 58 p.c., and railway rolling stock 47 p.c. of the Dominion totals of these products. The Province of Quebec is thus an outstanding manufacturing province rather on account of her large individual industries than because of the diversification of her industrial activities.

² Statistics for sugar refining, which is also one of the leading industries of this province, cannot be published, since there are less than three establishments reporting.

Section 3.—The Manufactures of Ontario, 1941

The gross value of the manufactured products of Ontario in 1941 represented about 51 p.c. of the total for the whole Dominion, while that of Quebec amounted to about 30 p.c. This premier position in manufacturing has been fairly uniformly maintained by Ontario, as the following percentages show: 1926, 52 p.c.; 1918, 53 p.c.; 1910, 50 p.c., 1900, 50 p.c.; 1890, 51 p.c.; and 1880, 51 p.c. In spite of the rapid industrial development in recent years in other provinces, such as Quebec, British Columbia and Manitoba, Ontario is maintaining a manufacturing production roughly equal to that of the remainder of the Dominion.

The geographic position of Ontario on the Great Lakes waterway system, by means of which the iron ore of Minnesota and the coal of Pennsylvania are readily accessible; the wide range of natural resources of forests, minerals, water powers, and agriculture; a large population and excellent water and rail transportation facilities to other parts of the country, have all encouraged industrial development. Other factors have been proximity to one of the most densely populated sections of the United States and the establishment within the Province of branch factories of United States industries, as in automobile manufacturing.

Industries producing capital or durable goods, which constitute an important factor in the manufactures of Ontario, were particularly hard hit during the early years of the depression preceding the present war. Thus, production was disproportionately curtailed in such important industries as automobiles, electrical equipment, machinery, agricultural implements, primary iron and steel, etc. This resulted in a lowering of the manufacturing production of the whole Province relatively to that of other provinces less affected by these influences. With the recovery since 1933 and the expansion in production resulting from the present war these industries in general have made good recovery, and Ontario, which accounted for 49 p.c. of the gross value of all products manufactured in the Dominion in 1933, had by 1941 increased the relative value to 51.4 p.c.

Ontario also has the greatest diversification of manufacturing production of any province. Outstanding among the industries in which this province is pre-eminent are those of automobiles, agricultural implements and starch manufacture which are carried on practically in this province alone. Other important industries in which Ontario leads, with the percentage which the production of each bears to that of the Dominion total in 1941, are as follows: leather tanneries 87.9, rubber goods 81.8, electrical apparatus and supplies 76.1, primary iron and steel 68.7, iron castings 68.0, fruit and vegetables preparations 66.0, flour and feed mills 60.7, hosiery and knitted goods 57.8, and furniture 56.5.

Section 4.—The Manufactures of the Prairie Provinces, 1941

The leading industries of these Provinces are those based on their agricultural resources—their grain-growing, cattle-raising, and dairying areas. Next in importance, generally, are industries providing for the more necessary needs of the resident population, such as bread and baking, printing and publishing, etc. The extensive railway services require large shops for the maintenance of rolling-stock, especially in the Winnipeg area. The widespread use of motor vehicles and power machinery on farms has given rise to petroleum refineries in each province. The greatly increased production of crude petroleum in Alberta seems likely to lead to further development of the refining industry. Manitoba, as the early commercial centre of the prairies, has had a greater industrial development than either of the other provinces. Its natural resources of accessible water powers, forests, and, more recently, minerals, have given rise to quite a diversification of industrial production.

Considering the three Provinces as an economic group, slaughtering and meat packing had the largest gross production in 1941, amounting to \$112,951,716, followed by butter and cheese with \$44,062,012, and flour and feed mills with \$38,575,041. These three industries for the processing of the agricultural products of the Provinces accounted for 43 p.c. of their total manufacturing production.

¹See footnote 1 to Table 1, p. 7.²Other leading industries, individual statistics of which cannot be given because there are fewer than three establishments in each industry, are: Manitoba, pulp and paper, non-ferrous metal smelting and refining, and coke and gas products; Saskatchewan, cotton and jute bags, automobiles, and non-ferrous metal smelting and refining; Alberta, malt mills, sugar refining, wood preservation, glass and cement products.

Section 5.—The Manufactures of British Columbia, 1941

Except for the major industrial provinces of Ontario and Quebec, British Columbia leads in manufacturing production. The rich forests have given the wood industries a pre-eminence in the Province. Sawmilling, in 1941, accounted for 20 p.c. of the manufacturing production of the Province and for 50 p.c. of the total value of sawmill output in the Dominion. Further emphasizing the importance of the forests in the industrial life of the Province, the pulp and paper industry ranked fourth. Second in importance was shipbuilding and repairs with a value of production of \$32,421,032. This industry advanced from sixth place in 1940 when the output was valued at only \$9,943,941. Third in importance was fish curing and packing, based principally on the estuarial salmon fisheries. British Columbia accounted for 66 p.c. of the total production of this industry in Canada. The varied resources of the Province and its position on the Pacific Coast have resulted in a wide diversification of its manufactures.

Percentage of leading industries to total of all industries in the Province.....	56.4	77.2	73.7	75.9	82.1	80.7

¹ See footnote 1 to Table 1, p. 7.² Includes other leading industries, statistics of which cannot be published because there are fewer than three establishments in each industry. Such industries are: condensed milk, sugar refining, non-ferrous metal smelting and refining, and bridge and structural steel.

Section 6.—Manufacturing Industries in Cities and Towns

The prosperity of most of the cities and towns of Canada, especially in the east, is intimately connected with their manufacturing industries, which provide employment for a large proportion of their gainfully occupied population. In the west the cities are more largely distributing centres, though manufactures are rapidly increasing there also.

Table 8, indicating the extent to which the manufacturing industries of Canada are concentrated in urban centres, shows by provinces the proportion of the gross manufacturing production contributed by cities and towns having a gross production of over \$1,000,000 each. In the more highly industrialized provinces of Ontario and Quebec such cities and towns in 1941 accounted for 94.6 p.c. and 93.2 p.c., respectively, of the totals for those provinces, while in the Maritime Provinces and British Columbia, where sawmilling, fish packing, and dairying are leading industries, the proportions fell to 70.6 p.c. and 71.9 p.c., respectively. In the Prairie Provinces manufacturing is confined largely to a few urban centres.

8.—Cities and Towns Each with a Gross Manufacturing Production of over \$1,000,000, Number of Establishments and Total Gross Production in such Cities and Towns as a Percentage of the Grand Total, by Provinces, 1941.

NOTE.—Statistics published in this table are in some cases higher than the figures published in Table 10, since, in the table below are included statistics of towns with less than three establishments and production of over \$1,000,000 each. It was not possible to publish this information, except in summary form in Table 10 without disclosing the operations of individual establishments.

Province	Cities and Towns with a Gross Production of over \$1,000,000 each	Establishments Reporting in Cities and Towns Producing over \$1,000,000 each	Total Production in Cities and Towns Producing over \$1,000,000 each	Total Production in each Province	Production in Cities and Towns as a Percentage of Total Production in each Province

APPENDIX II

Alphabetical List of the Products Reported as having been Manufactured in Canada in 1941

The appended list of the products of Canadian manufacturing industries presents the value and in most cases the quantity of the individual products in a much more detailed form. Prior to 1927, in presenting statistics of manufacturing production, the whole production of an establishment was taken as a unit. This not only prevented the presentation of production figures for specific products in detail, but also involved numerous inaccuracies in the production statistics of classes of commodities, owing to the fact that commodities which may be the major line of production in one establishment may also be products of secondary importance in another establishment where the major line of production puts the establishment into a different class. The statistics which follow, however, have been compiled by taking from the individual returns of each of the 26,293 manufacturing establishments covered, the value and, when given, the quantity of each commodity specified as produced by the establishment. In this way, detailed production figures are obtained for specific commodities and furthermore the total production of each commodity is brought together, no matter how varied may be the operations in different establishments producing it. Nevertheless it should be pointed out to those making use of these figures that there is one element of incompleteness about them. In the returns of many manufacturers, products of minor importance are grouped under the name "all other products". As will be seen from the group at the end of the list, the value of products not specified, while they may appear unimportant to the individual manufacturer, are, in the aggregate, a large amount, especially in the industries of the iron and steel group. It is obvious that one manufacturer may consider a product of insufficient importance to report separately for his establishment, while that same product may be reported separately by other establishments. In other words, included in the value of other products not specified at the end of the list, there are doubtless values which, had the products been specified by the manufacturer, would have been included in the values of commodities appearing on the list. However, the products not specified total only about 1.4 per cent in value of the whole manufacturing production, although in the iron and steel group this proportion is 3.6 per cent. With the exception of this group, therefore, the incompleteness of the figures on this account, is insignificant.

There is no duplication in the listing of products, nor do any of the items include products listed in more detail under another name. It is possible, however, that essentially the same commodity produced in different establishments may have been called by different names; in such a case, which is probably a very rare one, the items would appear separately in the following list.

CANADA.

LIST OF PUBLICATIONS, CENSUS OF MANUFACTURES; DOMINION BUREAU OF STATISTICS

Manufactures

- (1) General—General Report on the Manufacturing Industries of Canada with appendix giving Alphabetical List of Products; Geographical Distribution of the Manufacturing Industries of Canada; also Reports for the Provinces and Leading Cities; Quantity of Manufacturing Production in Canada, 1923-29. Weekly Earnings of Male and Female Wage-Earners in the Manufacturing Industries of Canada.
- (2) Manufactures of Vegetable Products—Biennial General Report on Manufactures of Vegetable Products. Annual Bulletins as follows: (*a*) Coffee, Tea, Spices and Miscellaneous Foods; (*b*) Fruit and Vegetable Preparations, including Canning, Evaporating and Preserving, and Pickles, Sauces, Vinegar and Cider; (*c*) Flour and Feed Mill Products; (*d*) Bread and other Bakery Products; (*e*) Biscuits and Confectionery, including Cocoa and Chocolate; (*f*) Macaroni Vermicelli, etc.; (*g*) Distilled Liquors; (*h*) Breweries; (*i*) Wine; (*j*) Rubber Goods, including Rubber Boots and Shoes; (*k*) Prepared Breakfast Foods; (*l*) Sugar Refineries; (*m*) Tobacco Products; (*n*) Vegetable Oil Mills; (*o*) Canned Foods; (*p*) Ice Cream; (*q*) Pack of Fruits and Vegetables, preliminary; (*r*) Aerated Waters; (*s*) Stock and Poultry Feeds; (*t*) Stocks of Unmanufactured Tobacco on hand, quarterly report; (*u*) Stocks of Canned Fruits and Vegetables, quarterly report.
- (3) Animal Products and their Manufactures—Annual Reports and Bulletins as follows: (*a*) The Dairy Factory Industry; (*b*) Processed Cheese; (*c*) Fish Processing (contained in annual Fisheries Statistics); (*d*) Slaughtering and Meat Packing and Sausage and Sausage Casings; (*e*) Leather Tanneries; (*f*) Leather Belting, Leather Boot and Shoe Findings and Miscellaneous Leather Goods; (*g*) Leather Boots and Shoes; (*h*) Leather Gloves and Mittens; (*i*) Fur Goods, Fur Dressing. Monthly Bulletin on Leather Footwear Production. Monthly Bulletin on Concentrated Milk Production.
- (4) Textiles and Allied Industries—Biennial General Report on the Textile Industries of Canada. Annual Bulletins as follows: (*a*) Cotton Textiles (cloth, yarn, thread and waste); (*b*) Woollen Textiles (cloth, yarn, waste, carpets and woollen goods, n.e.s.); (*c*) Silk and Artificial Silk; (*d*) Men's Factory Clothing incl. Men's Furnishings; (*e*) Women's Factory Clothing; (*f*) Hats and Caps; (*g*) Hosiery and Knitted Goods; (*h*) Oiled and Waterproofed Clothing; (*i*) Cordage, Rope and Twine; (*j*) Corsets; (*k*) Cotton and Jute Bags; (*l*) Dyeing and Finishing of Textiles; (*m*) Awnings, Tents and Sails.
- (5) Manufactures of Forestry Products—Printed Bilingual Reports: (*a*) The Lumber Industry (biennial); (*b*) The Pulp and Paper Industry (biennial); (*c*) Wood-Using Industries (biennial); (*d*) Paper-Using Industries (biennial). Stencilled annual preliminary reports: (*a*) Lumber; (*b*) Pulp and Paper; (*c*) Wood-Using Industries; (*d*) Planing Mills and Sash and Door Factories; (*e*) Hardwood Flooring; (*f*) Furniture; (*g*) Printing Trades (Comprising the following industries: Printing and Publishing; Printing and Bookbinding; Lithographing; Engraving, Stereotyping and Electrotyping; Trade Composition and Blue Printing); (*h*) Paper Boxes and Bags. Stencilled biennial report: Lumber Distribution in Canada and the United States. Stencilled annual bulletins: (*a*) Boxes and Baskets; (*b*) Carriages, Sleighs and Vehicle Supplies; (*c*) Cooperage; (*d*) Coffins and Caskets; (*e*) Boatbuilding; (*f*) Lasts, Trees and Wooden Shoe findings; (*g*) Wood-turning; (*h*) Woodenware; (*i*) Excelsior; (*j*) Beekeepers' and Poultrymen's Supplies; (*k*) Wooden Refrigerators; (*l*) Miscellaneous Wood-Using Industries; (*m*) Roofing Paper; (*n*) Miscellaneous Paper Goods. Mimeographed Monthly Bulletins: (*a*) Asphalt Roofing Production; (*b*) Asphalt Roofing Sales.

- (6) Iron and Steel and their Products—Biennial Report. Annual Bulletins as follows: Preliminary Summary on the Iron and Steel Industry. (a) Primary Iron and Steel; (b) Iron Castings; (c) Heating and Cooking Apparatus (except boilers and radiators); (d) Boilers, Tanks and Plate work; (e) Farm Implements and Machinery; (f) Machinery; (g) Automobiles*; (h) Automobile Parts; (i) Bicycles; (j) Railway Rolling Stock; (k) Wire and Wire Goods; (l) Sheet Metal Products; (m) Hardware, Tools and Cutlery; (n) Bridge Building and Structural Steel Work; (o) Shipbuilding and Ship Repairs*; (p) Aircraft*; (q) Miscellaneous Iron and Steel Products. Commodity Bulletins on the Production of Pig Iron; Steel; Washing Machines; Cream Separators; Warm Air Furnaces; Galvanized Sheets; Wire Nails; Steel Wire; Wire Fencing; Stoves, etc. Monthly Bulletins; (a) Pig Iron, Steel Ingots and Castings; (b) Steel Ingots; (c) Automobile Statistics*.
- (7) Manufactures of Non-Ferrous Metals—Biennial Report. Annual Bulletins as follows: Preliminary Summary on Manufactures of Non-Ferrous Metals. (a) Aluminium Products; (b) Brass and Copper Products; (c) White Metal Alloys; (d) Jewellery and Silverware; (e) Electrical Apparatus and Supplies; (f) Non-Ferrous Metal Smelting and Refining; (g) Miscellaneous Non-Ferrous Metal Goods. Quarterly Reports on Production and Sales of Radio Sets*, and Sales of Storage Batteries. Commodity Bulletins on the Production of Batteries; Silverware; Vacuum Cleaners; Electric Motors and Generators; Electric Transformers; Incandescent Lamps, etc.
- (8) Manufactures of the Non-Metallic Minerals—Biennial Report. Annual Bulletins as follows: Preliminary Summary on Manufactures of Non-Metallic Minerals. (a) Asbestos Products; (b) Cement and Cement Products; (c) Coke and Gas; (d) Glass (blown, cut and ornamental, etc.); (e) Lime; (f) Petroleum Products; (g) Clay Products; (h) Salt; (i) Sand-lime Brick; (j) Stone; (k) Artificial Abrasives; (l) Gypsum and Gypsum Products; (m) Miscellaneous Non-Metallic Mineral Products, including Carbon Electrodes—Mica Products—Non-Metallic Minerals, n.e.s. Also special report on the consumption of Coke in Canada. Monthly bulletins on (a) Coke Statistics; (b) Sales of Manufactured and Natural Gas.
- (9) Chemicals and Allied Products—Biennial Report. Annual Bulletins as follows: Preliminary Summary on Chemicals and Allied Products; (a) Coal Tar Distillation; (b) Acids, Alkalies and Salts; (c) Compressed Gases; (d) Fertilizers; (e) Medicinal and Pharmaceutical Preparations; (f) Paints, Pigments and Varnishes; (g) Soaps, Cleaning Preparations and Washing Compounds; (h) Toilet Preparations; (i) Inks; (j) Adhesives; (k) Polishes and Dressings; (l) Hard Wood Distillation; (m) Miscellaneous Chemical Products, including Boiler Compounds; Plastic Products; Insecticides; Sweeping Compounds, Disinfectants; Matches; Dyes and Colours; Explosives, ammunition and fireworks; Chemical Products, n.e.s. Special Reports on the Fertilizer Trade in Canada. Commodity Bulletins on Sulphuric Acid, Ammonium Sulphate, etc. Special Report—Directory of Chemical Industries in Canada. Special Report on the Consumption of Chemicals in Municipal Waterworks.
- (10) Miscellaneous Manufactures—General Report. Annual Bulletins as follows: (a) Brooms, Brushes and Mops; (b) Musical Instruments (including pianos, organs and phonographs and Musical Instrument Materials and Parts; (c) Buttons; (d) Bed Springs and Mattresses; (e) Sporting Goods.

Part I.—General Analysis of Manufacturing in the Dominion	5
Section 1. <i>Growth of Manufacturing in Canada</i>	7
1. Historical Summary of Statistics of Manufactures for the Dominion, 1870-1942.....	7
2. Summary Statistics of Manufactures, by Provinces, Significant Years, 1917-42.....	9
3. Summary Statistics of Manufactures, by Industrial Groups, Significant Years, 1917-42...	10
4. Summary of Statistics of Manufactures, Significant Years, 1917-42.....	13
5. Consumption of Manufactured Products, 1922-42.....	14
Section 2. <i>Value and Volume of Manufactured Products</i>	14
6. Indexes of the Volume of Manufacturing Production, According to Component Material and Purpose Classifications, Significant Years, 1923-42.....	15
7. Indexes of the Volume of Manufacturing Production for the Groups of the Purpose Classification, Significant Years, 1923-42.....	16
Section 3. <i>Production by Industrial Groups and Individual Industries</i>	16
Subsection 1. Manufactures Grouped by Chief Component Materials.....	16
8. Percentage Variation in Employment, Salaries and Wages, and Gross Value of Products in the Main Industrial Groups Compared for Significant Years, 1929-42.....	17
9. Statistics of the Numbers, Capital, Employees, Salaries and Wages, Power, Fuel, Materials, and Values of Products of Canadian Manufacturing Industries, 1942.....	18
Subsection 2. Manufactures Classified by the Purpose of the Products.....	24
10. Principal Statistics of the Manufacturing Industries of Canada, Classified According to the Purpose of the Principal Product, by Main Groups, Significant Years, 1922-42, and in Detail for 1942.....	24
Subsection 3. Manufactures Classified by Origin of the Materials.....	26
11. Principal Statistics of the Manufacturing Industries of Canada, Classified According to the Origin of the Materials Used, by Main Groups, Significant Years, 1924-42.....	27
Subsection 4. Leading Manufacturing Industries.....	29
12. Principal Statistics of the Forty Leading Industries of Canada, Ranked According to the Gross Value of the Products, 1941.....	30
13. Principal Statistics of the Forty Leading Industries of Canada, Ranked According to the Gross Value of the Products, 1942.....	31
Section 4. <i>Principal Factors in Manufacturing Production</i>	32
Subsection 1. Capital Employed.....	32
14. Percentage Distribution of Capital Employed in the Manufacturing Industries of Canada, by Provinces and Industrial Groups, Significant Years, 1917-42.....	32
15. Forms of Capital Employed in the Manufacturing Industries of Canada, by Provinces and Industrial Groups, 1942, with Totals for Significant Years, 1924-41.....	33
Subsection 2. Employment in Manufactures.....	33
16. Salaried Employees and Wage-Earners in the Manufacturing Industries of Canada, with Volume of Manufacturing Production and Comparative Efficiency of Production, 1931-42.....	34
17. Wage-Earners Employed in the Manufacturing Industries of Canada, by Months and Sex, Significant Years, 1922-42.....	35
18. Wage-Earners in Manufacturing Working Specified Numbers of Hours per Week in the Month of Highest Employment, 1933-42.....	36
19. Wage-Earners Working Specified Weekly Hours in the Month of Highest Employment, by Sex, Province and Industrial Group, 1942.....	37
20. Male Wage-Earners in the Forty Leading Industries Working Specified Weekly Hours in the Month of Highest Employment, 1942.....	39
21. Female Wage-Earners in the Forty Leading Industries Working Specified Weekly Hours in the Month of Highest Employment, 1942.....	40
Subsection 3. Salaries and Wages in Canadian Manufacturing Industries.....	41
22. Salaries and Wages Paid in the Manufacturing Industries of Canada, by Provinces and Industrial Groups, 1942, with Totals for Significant Years, 1917-41.....	41
23. Salaries and Wages Paid in the Forty Leading Industries, 1942, with Comparative Figures of Average Salaries and Wages Paid in 1941.....	43
24. Average Annual, Weekly and Hourly Earnings of the Male and Female Wage-Earners, 1934-42.....	44
25. Average Annual, Weekly and Hourly Earnings of Wage-Earners, Classified by Sex, Province and Industrial Group, 1942.....	45
26. The Forty Leading Industries Employing the Greatest Number of Male Wage-Earners, Ranked According to the Average Annual, Weekly and Hourly Earnings, 1942.....	46
27. The Forty Leading Industries Employing the Greatest Number of Female Wage-Earners, Ranked According to the Average Annual, Weekly and Hourly Earnings, 1942.....	47

TABLE OF CONTENTS—Concluded

Chief, General Manufactures Branch: A. COHEN, B. Com.

THE MANUFACTURING INDUSTRIES OF CANADA, 1942

Introduction

This report deals with manufacturing industries in Canada in two main Parts. Part I gives general analyses of manufactures in the Dominion including: the historical development of manufacturing in Canada in so far as statistical data are available; production by industrial groups and individual industries giving a detailed treatment of current production under various groupings and individual industries; general analyses of the principal factors in manufacturing production under such sub-headings as capital, employment, salaries and wages, size of establishment, and power and fuel. Part II deals with the provincial and local distribution of manufacturing production.

With regard to the first section of Part I, dealing with historical development, it has been impossible to compile absolutely comparable statistics over a long period of years. From 1870 to 1915 statistics were collected only in connection with decennial or quinquennial censuses, and there was inevitably some variation in the information collected. The annual Census of Manufactures was instituted in 1917 and, while numerous changes have been made since then in the information collected and the treatment of the data, an effort has been made to carry all major revisions, in so far as possible, back to 1917, so that the figures for the period since then are on a reasonably comparable basis.

The far-reaching influence of the War of 1914-18 was, of course, the outstanding factor in the growth recorded prior to the war now being waged. It was during these years that Canadian manufactures began to develop on a really large scale. Munitions contracts placed by the Imperial Munitions Board of Canada in those years totalled well over \$1,000,000,000 and these did not include such fields of production as shipbuilding and aviation, which are very important to the present Canadian effort. Shipbuilding construction alone during the First World War amounted to \$35,000,000 in 1917, \$75,000,000 in 1918 and \$86,000,000 in 1919. In the same three years, employees in the shipbuilding industry numbered 12,000, 22,000 and 25,000, respectively.

Canada's effort in the present war has brought manufacturing production to a much higher level than ever before. The output of manufactured products in 1942 amounted to \$7,553,794,972 which represents an increase of 117.4 p.c. over the pre-war year of 1939, and an increase of 95 p.c. compared with the pre-war maximum attained in 1929. Great though the advance was up to the end of 1942, the output of manufactured products had not yet reached its peak. According to a preliminary compilation for 1943, the gross value of production was valued at \$8,400,000,000,

a further advance of about 11 p.c. over the previous year. The urgent needs of Allied Nations assures a continuation of the present large-scale production as long as the War lasts. There is little doubt that the diversified development which has taken place during the war years will have a permanent effect on Canadian manufacturing production after the War. Undoubtedly, the effects of the thoroughgoing transformation in industrial production will be far-reaching and will complicate the post-war readjustment in industry.

PART I.—GENERAL ANALYSES OF MANUFACTURING IN THE DOMINION

Section 1.—Growth of Manufacturing in Canada

This section gives a picture of the growth of manufacturing, in general, as shown by comparable principal statistics, i.e., establishments, capital, employees, salaries and wages paid, cost of materials, and values of products. Other useful comparisons are made in Table 4 and figures of consumption are given in Table 5. Tables 6 and 7 show volume comparisons.

1.—Historical Summary of Statistics of Manufactures for the Dominion, 1870-1942

NOTE.—Statistics of the non-ferrous metal smelting industries were included in manufactures for the first time in 1925.

Year	Estab- lish- ments	Capital	Em- ployees	Salaries and Wages	Cost of Materials	Net Value of Products ¹	Gross Value of Products

¹ In accordance with a resolution passed by the Conference of British Commonwealth Statisticians, 1935, the net value of production is now computed by subtracting the cost of fuel and electricity as well as the cost of materials from the gross value of the products. The figures for 1924 and later years have, therefore, been revised in accordance with this resolution. The revision could not be carried farther back as statistics for cost of electricity are not available for years prior to 1924. ² Not reported. ³ A change in the method of computing the number of wage-earners in the years 1925 to 1930, inclusive, increased the number somewhat over that which the method otherwise used would have given. In 1931, however, the method in force prior to 1925 was re-adopted. The figures for 1931 and later years are, therefore, comparable with those for 1924 and earlier years.

¹ See footnote 1 Table 1.² See footnote 3, Table 1.

Summary Statistics of Manufactures.—The figures in Table 4 trace the tendencies in Canadian manufacturing industries as clearly as possible through the latest period of their development. In analysing statistics of production and materials used, it should be borne in mind that, due to the inflation of values from 1914 through the immediate post-war period and the drop in prices of commodities during the depressions following 1921 and 1930, the figures for these periods are not completely comparable. One very important figure, however, which shows the trend of development clearly, is concerned with the use of power. The total horse-power employed increased from 1,658,475 in 1917 to 6,062,020 in 1942, an increase of about 265 p.c. in 25 years. In the same period, horse-power per wage-earner showed an interrupted trend from 3.06 to 10.82 in 1933 and 9.46 in 1939. With the large increase in the number of wage-earners on war production, and the more efficient utilization of the equipment available, the horse-power per wage-earner dropped to 6.22 in 1942. The significant feature is the increase in both the absolute figures of power employed and the averages per wage-earner during the depression years as compared with 1929, although the large numbers of persons again finding employment since 1933 reduced the averages for the years 1934 to 1937 and again for 1940 to 1942. Other interesting comparisons are the trend of value added by manufacture, per employee, and of average salaries and wages paid since 1929.

Consumption of Manufactured Products.—One of the beneficial results of adopting the same classification for external trade and for production is exhibited in Table 5, where the value of commodities made available for consumption in Canada is derived from these statistics. For example, the value of all manufactured commodities made available in 1942 was \$6,781,000,000, a figure obtained by adding to the value of manufactured products the value of the imports of manufactured and partly manufactured goods and deducting the value of the exports.

In past years there have always been large amounts of manufactured animal, wood and non-ferrous metal products available for consumption in Canada with considerable surplus left for export. Since the commencement of the War, however, it has been necessary to export more and more of such goods to the United Kingdom, and while this has been done mainly by increasing production, Government control of consumption at home is growing stronger as the War advances. In the case of manufactured vegetable products, the figures for 1942 show large excesses of exports over imports for such products as cereal foods (including flour), canned vegetables, etc. Excesses of imports were chiefly confined to cocoa, tea, coffee and preserved fruits and fruit juices, in which cases domestic production cannot be substituted.

On balance, Canada has, in the past, imported large quantities of iron and steel, textile and non-metallic mineral products in spite of large home production. The urgent requirements for munitions of war have brought about an expansion of the iron and steel, chemical and non-ferrous metals industries that will enable Canada to meet most requirements for home consumption in the future as these industries are adjusted for peace-time needs.

Imports and exports of munitions, equipment and supplies for the Armed Forces, regardless of their component materials, are credited to the miscellaneous group in the foreign trade statistics. On the other hand, in the statistics on production these items are allocated on the basis of chief component material. For this reason it becomes impossible to compute consumption statistics by types of commodities, as was done in the past and the analysis by industrial groupings followed in previous years is now dropped from Table 5.

Averages, per establishment.....	76	92	174	174	203	222	218	218
Averages, per wage-earner.....	3.06	3.97	6.67	10.82	8.65	9.46	7.29	6.22

¹ A change in the method of computing the number of wage-earners in the years 1925 to 1930, inclusive, increased the number somewhat over that which the method otherwise used would have given. There was, therefore, a proportionate reduction in the averages for 1925-30 per employee and wage-earner, as compared with what these averages would have been under the other method. In 1931, however, the method in force prior to 1925 was re-adopted. The figures for 1931 and later years are, therefore, comparable with those for 1924 and earlier years.

² Net values of products, see footnote 1, Table 1.

¹ Imports and exports of manufactured and partly manufactured goods for the years 1922 to 1938 are for the fiscal years ended March 31 of the following years, while for 1939 to 1942 they are for the calendar year. Net imports are total imports less foreign products re-exported.

² For 1928 to 1942 foreign products imported and later re-exported are eliminated from the value of products available for consumption, but for 1927 and previous years this was impossible, since foreign exports for these years had never been analysed as raw materials or partly or fully manufactured goods. Therefore in this table the value of manufactured products made available for consumption, for the years 1922 to 1927, inclusive, is an overstatement by the amount of the foreign exports of manufactured goods in each year, probably varying from about \$11,000,000 in 1922 to \$18,000,000 in 1927.

Section 2.—Value and Volume of Manufactured Products

Value of Manufactured Products.—In the interpretation of manufacturing values over a number of years, variations in the level of prices must be borne in mind, especially when such variations have been as great as those in the period since the annual Census of Manufactures was begun in 1917. The index number of wholesale prices in Canada, on the 1926 base, compiled by the Dominion Bureau of Statistics, stood at 114.3 in 1917, 155.9 in 1920, 97.3 in 1922, 95.6 in 1929, 67.1 in 1933, 84.6 in 1937, 75.3 in 1939 and 95.6 p.c. in 1942. Index numbers of the prices of fully or chiefly manufactured goods were: 113.5 in 1917, 156.5 in 1920, 100.4 in 1922, 93.0 in 1929, 70.2 in 1933, 80.5 in 1937, 75.3 in 1939 and 91.9 p.c. in 1942.

Volume of Manufacturing Production.—Since real income is ultimately measured in goods and services, the growth of the volume of manufacturing production, as distinguished from its value, becomes a matter of great significance. The important thing to know is whether consumers are getting more goods and services, not whether they are expending more dollars and cents.

The index of volume (Table 6) is based on the quantities of manufactured products reported, and covers 71.1 p.c. of the total value of the production in 1926. The industry indexes are weighted according to the values added by manufacture. The indexes for the years 1923-31 are based on the values added in 1926. The

weights and products were changed in 1931, 1936 and then again in 1941. By changing the weights and products used in the construction of the index every five years, current changes in production are thereby reflected more accurately.

The physical volume of manufacturing production increased 50.2 from 1923 to 1929. When it is recalled that the population of Canada is estimated to have increased only 11.3 p.c. during the same period, the growth of manufacturing production is indeed remarkable. Of this advance, the part resulting from an increase in the domestic demand due to growth of population would therefore be about 11.3 p.c. Exports of partly and fully manufactured goods increased from \$591,830,000 in the fiscal year ended Mar. 31, 1924, to \$686,876,000 in the fiscal year 1930, the increase in exports representing about 3.6 p.c. of the 1923 production. The remainder of the increase in production by 1929, or a margin equal to roughly 35 p.c. of the volume of manufactures of 1923, was, therefore, apparently absorbed by increases in capital equipment and by the rise in the standard of living of the population of Canada.

A similar analysis of the volume of manufactures since 1929 in relation to population and exports would show that the decline in the depression preceding the present War was due chiefly to reduced exports and a cessation in production of capital equipment. As a result of the expansion in production resulting from the demands created by the War, the physical volume of production increased by 69.2 p.c. since 1939 and by 77.4 p.c. since 1929. The chemical and allied products group, with an increase of 239.4 p.c., reported the greatest expansion in output since 1939. This was followed by the iron and its products group with an increase of 183.9 p.c., non-ferrous metal products 92.3 p.c., miscellaneous industries 62.8 p.c., non-metallic mineral products 50 p.c., textiles and textile products 45.2 p.c., animal products 35.4 p.c., wood and paper products 25.7 p.c., and vegetable products 25 p.c. There was also an increase in the volume of consumers' goods. As was to be expected, the increase was not as great as that for the output of equipment and supplies needed by the Armed Forces. Drink and tobacco increased by 53.3 p.c., clothing 31.9 p.c., and food 22.1 p.c. These increases compare with an increase of 69.2 p.c. for manufacturing in general.

Section 3.—Production by Industrial Groups and Individual Industries

*For the purposes of the Census of Manufactures, the main detailed analysis is made under a classification in which industries are grouped according to the chief component materials of the goods manufactured. This is, therefore, the grouping used in Table 9, where the statistics of individual industries are presented in detail, and in the historical series shown in Table 3. However, there are also less detailed analyses under purpose groupings given in Table 10 and under origin groupings in Table 11.

Subsection 1.—Manufactures Grouped by Chief Component Materials

A classification based on the chief component materials in the various products of each manufacturing establishment was applied for the first time in the compilation of the returns for 1920. The number of groups was reduced from fifteen to nine to correspond with the external trade classification and the classes of industry were somewhat altered to conform with recent industrial developments. Subsequently, a number of minor changes were made, the most important being the elimination of central electric stations and the dyeing, cleaning and laundry industry from the compilation in 1936. Revisions due to these changes have been carried back to 1917 in so far as possible.

Recent Changes in Manufacturing Production.—Table 8 shows the effects of the depression, the recovery since 1933, and the impact of the present War upon the main groups of industries with regard to the numbers employed, the salaries and wages paid, and the gross value of products. Owing to the price decline during the depression, money values of both wages and of products were naturally affected more than the number of employees. Furthermore, during periods of curtailed production there is a tendency for wage-earners to be put on part time, while the number of salaried employees responds less quickly to reduction in output than that of wage-earners. Therefore, there are a number of reasons why the variation in the number of employees should be less than that of money values. The figures of Table 8 are to be compared with those of Table 6 which show changes in volume of production. Compared with 1939, the number of employees in 1942 increased by 75.1 p.c. as compared with an increase of 69.2 p.c. in the physical volume of production. Salaries and wages paid were 128.1 p.c. higher and the gross value of production 117.4 p.c. higher. Another significant change is the increase in the proportion of women engaged in manufacturing. Whereas in 1939, there were 281 females to every 1,000 males employed, in 1942 this figure jumped to 347.

8.—Percentage Variation in Employment, Salaries and Wages, and Gross Value of Products in the Main Industrial Groups Compared for Significant Years, 1929-42

NOTE.—The highest pre-depression year was 1929, while the lowest depression year was 1933.

Industrial Group	1933 Compared with 1929			1939 Compared with 1929			1942 Compared with 1939

Detailed Statistics by Groups and Individual Industries.—Table 9 presents for the year 1942 detailed statistics regarding the individual industries under which all industrial plants in the Dominion are classified. The industries are further assembled under nine main groups according to the principal component material of their products.

The incidence of the War resulted in a re-arrangement in the rank of many industries. Industries producing supplies and equipment for the Armed Forces naturally advanced while those industries producing for the domestic consumers' market declined in importance. To supply the raw materials needed by the industries engaged principally in war production, it became necessary to restrict or prohibit the manufacture of many products such as pleasure cars, radios, washing

machines, electrical equipment, household appliances, agricultural implements, etc. Though these industries were forced to change over to war-time production, the changes did not affect the value of their output and consequently their importance as producers of manufactured goods did not alter drastically. To analyse the effects of the War on any industry, it is necessary to compare the nature of the products made before the War with that of the present. This should be borne in mind in making industrial comparisons with pre-war years. For example, the number of employees engaged in the agricultural implements industry increased by 4,996 between 1940 and 1942; this in spite of the fact that the output of agricultural implements remained at about the same level. The increase was due to a change-over of some of the plants to war production. It is therefore impossible to trace industrial trends from the principal statistics alone, as published in this report.

Subsection 2.—Manufactures Classified by the Purpose of the Products

Significant changes have occurred since 1922 in the importance of the various groups shown in the purpose classification. On the basis of percentage to gross value of production, the most striking change is in the food group which showed a substantial decline, from 28.2 p.c. of the total in 1922 to 22.6 p.c. in 1939 and 17.0 p.c. in 1942. The producer materials group, which took the lead from the food group in 1923, showed a steady increase up to 1939, since when it has remained at about 32 p.c. of the total. Due to the production of war equipment, vehicles and vessels have increased from 7.7 p.c. in 1939 to 13.3 p.c. in 1942 and industrial equipment from 15.2 p.c. to 17.4 p.c. The other groups with the exception of "miscellaneous" have shown slight declines during the war years.

¹ For the year 1922 the figures for "Cost of Materials" and "Gross Value of Products" include the value placed on intermediate products used in further processes in the chemical group of industries. For this reason these figures differ slightly from those contained in the other tables of this report.

¹ Includes "infusions."

Subsection 3.—Manufactures Classified by Origin of the Materials

The distinction made between farm materials of Canadian and foreign origin is based on whether the materials are indigenous to Canada rather than on their actual source. Thus, the industries included in the foreign origin classes are those depending upon materials that cannot be grown in Canada, such as tea, coffee, spices, cane sugar, rice, rubber, cotton, etc. Industries included in the Canadian origin classes may be using large quantities of imported materials, however.

The mineral origin group includes, in addition to the non-ferrous metals, so largely produced in Canada, the manufactures of iron and steel, of petroleum, and of other mineral substances, the raw materials for which are very largely imported. Products of mineral origin, with the exception of fuels, are nearly all durable goods. A high standard of living and advanced industrial organization is usually indicated by a relatively large production and consumption of mineral products. During periods of depression when the production of capital goods is curtailed, employment in the industries of the farm group, which produce mainly consumer goods, exceeds that of the mineral group. In 1942 the industries of the mineral group had by far the greatest capital investment, employed the largest number of persons and paid out the highest amount in salaries and wages, the average capital per employee was \$4,980 and average salaries and wages \$1,681. For the industries of the farm origin group the respective averages were \$4,289 and \$1,207.

¹For the year 1924 the figures for "Cost of Materials" and "Gross Value of Products" include the value placed on intermediate products used in further processes in the chemical group of industries. For this reason these figures differ slightly from those contained in the other tables of this report.

Subsection 4.—Leading Manufacturing Industries

In the following statement, the rank of the ten leading industries in 1942, from the standpoint of gross value of production, is compared with their respective ranks in significant years since 1922.

THE TEN LEADING INDUSTRIES, 1942 COMPARED AS TO RANK, SIGNIFICANT YEARS 1922-42

Industry	Rank in							
	1942	1941	1940	1939	1937	1933	1929	1922
Non-ferrous metal smelting and refining.....	1	1	1	1	1	2	9	—
Slaughtering and meat packing.....	2	3	3	3	3	3	2	3
Pulp and paper.....	3	2	2	2	2	1	1	2
Automobiles.....	4	4	4	5	4	11	4	6
Miscellaneous chemical products.....	5	19	35	38	—	—	—	—
Shipbuilding.....	6	17	32	—	—	—	—	—
Primary iron and steel.....	7	7	10	11	12	31	16	20
Butter and cheese.....	8	5	5	4	6	5	6	5
Electrical apparatus and supplies.....	9	6	7	9	8	16	8	17
Sawmills.....	10	8	6	8	7	14	5	4

A prominent feature of Canadian manufacturing development in recent years has been the rapid growth of non-ferrous metal smelting. This industry, based upon the rich base metal resources of the country, has now taken its place among the leading manufactures along with the industries based upon forest, agricultural and live-stock resources. The incidence of the depression resulted in a re-arrangement in the ranking of many industries; in some cases this has proved to be temporary. Under the impetus of war production, the industries engaged in producing the equipment needed by the Armed Forces, such as shipbuilding, aircraft, automobiles, miscellaneous chemical products, and primary iron and steel, advanced to higher positions.

12.—Principal Statistics of the Forty Leading Industries of Canada, Ranked According to Gross Value of Products, 1941

	Industry	Estab- lish- ments No.	Capital \$	Em- ployees No.	Salaries and Wages \$	Cost of Materials \$	Value of Products	
							Net \$	Gross \$
1	Non-ferrous metal smelting and refining.....	14	309,963,342	16,014	27,482,689	232,814,167	119,736,294	379,322,270

Totals, Forty Lead- ing Industries.....		18,890	3,759,884,404	715,751	966,035,893	2,629,292,158	1,956,951,904	4,727,981,358
Totals, All Indus- tries.....		26,293	4,905,503,966	961,178	1,264,862,643	3,296,547,019	2,605,119,788	6,076,308,124
Percentages of lead- ing industries to all industries.....		71.8	76.6	74.5	76.4	79.8	75.1	77.8
Primary textiles.....		497	272,104,702	80,470	81,727,935	182,999,395	158,695,863	349,205,210

¹ On a broader classification basis, the primary textile industry, which includes the production of cottons, woollens, silk, hosiery and knitted goods, and the dyeing and finishing of textiles, ranks first in number of employees and salaries and wages paid and second in gross value of production.

¹ On a broader classification basis, the primary textile industry, which includes the production of cottons, woollens, silk, hosiery and knitted goods, and the dyeing and finishing of textiles, ranks first in number of employees and salaries and wages paid and second in gross value of production.

Section 4.—Principal Factors in Manufacturing Production

The subjects treated under this Section, in as much detail as limitations of space permit, include capital, employment, salaries and wages, size of establishments and power and fuel used in manufacturing.

Subsection 1.—Capital Employed

The remarkable increase in capital employed in Canadian manufactures from the beginning of the twentieth century has, of course, run parallel with the rapid growth in industrial operations. From 1900 to 1905 the capital increased from \$446,900,000 to \$833,900,000, and advanced to \$1,958,700,000 in 1915. During this period returns were received from establishments with 5 hands or over, and, while the rise in wholesale prices did not exceed 37 p.c., the capital employed in manufactures increased nearly 340 p.c.

The capital investment in 1942 in all establishments, irrespective of the number of employees, but exclusive of central electric stations, was \$5,489,000,000 as compared with \$2,334,000,000 in 1917, an increase of 135 p.c. while wholesale prices have declined about 16 p.c. in the same period.

Subsection 2.—Employment in Manufactures

Using a base and taking the percentages of the wage-earners and the total employees in each year, and dividing these percentages into the corresponding volumes of manufacturing production (see p. 15 for the index of volume), tentative conclusions are arrived at regarding the efficiency of production per wage-earner and per employee. These indexes of the efficiency of production are, of course, 19005—3

affected by the changes in the method of computing the number of wage-earners adopted in 1925, and then again in 1931. Inasmuch as the change increased the apparent number of employees between 1925 and 1930, it proportionately decreased the index of the efficiency of production. Comparability exists, however, between the figures prior to 1926 and subsequent to 1930. Table 16 shows only the latter period. Unfortunately, the period covered is rather limited for the purpose in view, but it is suggested that the reader compare these data with the comparable figures for 1917-30 at p. 421 of the 1939 Canada Year Book. Up to the beginning of the War the indexes may be considered as supplying satisfactory evidence of a general gain in volume of production per person employed. With the outbreak of war unemployed skilled workers were first absorbed into industry, with the result that the efficiency of production was slightly bettered. As the War progressed, however, manufacturers were forced more and more, to employ unskilled workers. The decline in the efficiency of production in 1942 may, therefore, be attributed to this cause as well as to absenteeism for various causes.

16.—Salaried Employees and Wage-Earners in Manufacturing Industries, with Volume of Manufacturing Production and Comparative Efficiency of Production, 1931-42

NOTE.—Figures, with qualifications as to comparability, for 1917 to 1930 are published at p. 421 of the 1939 Canada Year Book.

Monthly Record of Employment in Manufactures.—Ordinarily, manufacturing employment in Canada reaches its highest point during the summer months. Some of the seasonal industries, such as canning, are most active then, textile industries are preparing winter goods, and industry generally feels the active demand of the agricultural purchasing power resulting from the prospects of the season's harvest. After the setback of 1929, employment in 1930, 1931, 1932 and the first half of 1933 declined steadily, the monthly employment figures in each case being lower than the corresponding month of the previous year. The peak of employment in June, 1929, when 575,693 wage-earners were on the payrolls, was surpassed in September, 1937, with 582,305 wage-earners. With the outbreak of war the improvement in employment became increasingly rapid. A new high record was attained in September, 1942, when 1,014,030 wage-earners were employed, an increase of 80 p.c. over the same month in 1939.

Hours Worked by Wage-Earners.—From 1932, the first year for which figures on hours worked per week by wage-earnors are available, to 1942, each firm was required to report the number of hours worked by all its wage-earnors during the month in which the greatest number had been employed, the only exception being the years 1938 and 1939 when one week in a month of normal employment was reported. In 1938 the number of hours worked per week were broken down by sex, and a change was also made in the breakdown of the weekly hours worked. Since 1940 the hours worked per week include overtime while prior to that overtime was excluded. These changes make it impossible to measure accurately the changes in the number of hours worked per week. In any case, the figures in Tables 18 to 21 do not refer to any particular month, since the month of highest employment might be May for one firm and October for another; they represent the summation of the different months of highest employment as reported by all firms. For a given industry, however, the month of highest employment is more significant as in this case it coincides for a great number of firms engaged in the same industry.

For all wage-earnors, the hours worked per week declined from 48.9 in 1932 to 47.2 in 1939, and reached 50.2 in 1942, some of this increase no doubt being due to the inclusion of overtime. Female wage-earnors in 1942 worked an average 4.4 hours per week less than their male co-workers.

18.—Wage-Earners in Manufacturing, Working Specified Numbers of Hours¹ per Week in the Month of Highest Employment, 1938-42

NOTE.—For hours worked per week in 1932-37, see the 1942 edition of the Canada Year Book, p. 386, and in 1940, the 1943-44 edition, page 392.

Subsection 3.—Salaries and Wages in Canadian Manufacturing Industries

In 1942 the 27,862 establishments covered employed 177,187 salaried employees and 974,904 wage-earners, a total of 1,152,091 persons. Out of every 1,000 persons employed in manufacturing, 154 were classed as salary earners and 846 as wage-earners; the former earned 19.9 p.c. and the latter 80.1 p.c. of the total amount paid out as remuneration for services.

The percentages of salaries are usually relatively high in both Ontario and Quebec as compared with the other provinces. Ontario has a larger proportion of females among its salaried employees than the other provinces. The same situation prevails in Quebec with regard to wage-earners, due, no doubt, to the textile industries of the province. The importance of the textile industries in providing employment to females is strikingly illustrated by the fact that of all female wage-earners engaged in the manufacturing industries of Canada, 36 p.c. were found in the textile group. Normally the percentage is much higher. In 1942 large numbers of female wage-earners were employed in the aircraft and miscellaneous chemical industries. For this reason the percentage employed in the textile industries declined.

The average salary in 1942 amounted to \$1,890 which was \$144 or 8.2 p.c. higher than in 1939. Salaried employees in Ontario with \$1,977 received the highest salary. Quebec came second with \$1,892 and British Columbia third with \$1,872. The head offices of many large corporations being located in Montreal, Toronto, Vancouver and Winnipeg tend to raise the average salaries in the provinces in which these cities are located.

22.—Salaries and Wages Paid in Manufacturing Industries, by Provinces and Industrial Groups, 1942, with Totals for Significant Years, 1917-41

¹ The averages of wage-earners and earnings for the years 1931 to 1941 are strictly comparable with those for the years up to 1925 but not with those for the intervening years. The figures for the latest years—as for the earliest—represent the earnings for complete man-years of work, with no allowance for periods of unemployment. The difference amounts only to about 3 or 4 p.c. in the total figures and affects chiefly the seasonal industries.

² The increase in the number of salaried employees in 1931 is due to the following changes in method: (1) Prior to 1931 working proprietors, such as bakers, sawmill operators, small clothing manufacturers, etc., were required to report themselves as wage-earners. In 1931 and subsequent years, however, all such proprietors reported themselves as salaried employees. (2) In 1931 travelling salesmen who were attached to the plant, and devoted all or the greater part of their time to selling the products of that plant, were included with salaried employees. Prior to this they were not reported at all.

22.—Salaries and Wages Paid in Manufacturing Industries, by Provinces and Industrial Groups, 1942, with Totals for Significant Years, 1917-41—concluded

² For a breakdown of annual earnings of wage-earners, by sex, see Table 25.

The average wage in 1942 amounted to \$1,383 which was \$408 or 41.8 p.c. higher than in 1939. Manufacturing industries in British Columbia paid the highest average wages of \$1,633, followed by Ontario with \$1,463, Manitoba \$1,298, Nova Scotia \$1,295, Alberta \$1,294, Quebec \$1,259, etc. The high figures shown for Yukon and the Northwest Territories in regard to average wages are due to the unusual conditions under which industry is carried on in these regions and are not representative. Statistics on the distribution of employees by provinces and groups as well as average annual earnings are given in Table 22, and for a subdivision of wage-earners, by sex, see Table 25.

Average Annual Earnings in the Forty Leading Industries.—In only four industries did the average salary exceed \$2,500 in 1942; breweries, pulp and paper, woollen cloth and bridge and structural steel. In twenty-one they ranged between \$2,000 and \$2,500, in eleven they ranged between \$1,500 and \$2,000 and in the remaining four they were below \$1,500. The lowest salaries were reported by the sawmilling and butter and cheese industries each of which includes a large proportion of small establishments.

The highest wages, those above \$1,800, were paid in four industries, in all of which the proportion of skilled workers is high and the proportion of female workers is low. The automobile industry with \$2,135 was the highest in this group, followed by bridge and structural steel with \$2,007, shipbuilding and repairs \$1,846 and railway rolling-stock \$1,839. In eleven other industries average wages ranged between \$1,600 and \$1,800 in all of which the proportion of female workers is low. In nineteen other industries average wages ranged between \$1,000 and \$1,600, while in the remaining six they were below \$1,000. This last group includes industries made up of a large number of small establishments and in which the proportion of female workers is high. Employment by sex and average annual earnings in the forty leading industries is given in Table 23, and annual earnings by sex in Tables 26 and 27.

23.—Salaries and Wages Paid in the Forty Leading Industries, 1942, with Comparative Figures of Average Salaries and Wages Paid in 1941

NOTE.—Industries ranked according to the aggregate salaries and wages paid. For a subdivision of annual earnings of wage-earners, by sex, see Tables 26 and 27.

Average Annual, Weekly and Hourly Earnings.—In comparing earnings by provinces or groups, consideration should be given to the type of industries in each case since the distribution of industries has very definitely a regional significance. In some industries a labour force possessing deftness and speed or the ability to exercise muscular strength is necessary, in others the labour force must exercise craftsmanship or possess a high degree of technical knowledge. Workers in these latter industries naturally command relatively higher wages than those employed in industries whose employees are routine workers.

The ranking of provinces and industries as regards annual earnings is in many cases different to that of weekly or hourly earnings since the factors of number of weeks worked per year and number of hours worked per week enter into the picture. So that, while in general the same observations apply, a close study of the differences between the averages shown in Tables 22 and 23 will be of value to the student.

Average weekly earnings of male wage-earners for manufacturing as a whole amounted to \$31.75 in 1942, an increase of \$9.52 or 42.8 p.c. as compared with 1939. Average hourly earnings advanced from 46.2 cents in 1939 to 61.9 cents in 1942. Due to an increase of 3.2 hours in the working week, the increase in hourly earnings was only 34 p.c. Annual earnings at \$1,558 were 44.8 p.c. higher.

Female wage-earners received on an average \$17.41 per week in 1942, an increase of \$4.63 or 36.2 p.c. as compared with 1939. Hourly earnings at 37.1 cents were 31.1 p.c. higher, while annual earnings at \$854 were 38 p.c. higher.

24.—Average Annual, Weekly and Hourly Earnings of Male and Female Wage-Earners, 1934-42

Year	Average Earnings			Hours Worked per Week

Real Earnings of Employees in Recent Years.—When the index number representing the average yearly wages is divided by the index number of the cost of living, on the same base, a measure of "real" wages is obtained. Index numbers for 1931 to 1942 are given in Table 28. In 1933, the height of the depression, real wages were 88.3 on the 1935-39 base. From then on they rose steadily and stood at 126.8 in 1942, an increase of about 44 p.c.

28.—Average Yearly Earnings, and Index Numbers of Earnings, Cost of Living and Real Wages of Wage-Earners, in Manufacturing Industries, 1931-42

NOTE.—Figures on the 1917 base, with qualifications as to comparability, for 1917 to 1930 are published at p. 421 of the 1939 Canada Year Book.

Year	Wages Paid	Average Wage-Earners	Average Yearly Earnings	Index Numbers (1935-39=100)

Percentages of Salaries and Wages to Net Value of Products.—Table 29 shows the relation between salaries and wages paid by manufacturers and the total net value of production. Figures of gross production are often used in such calculations, but the values out of which the wages of employees must come in the long run are the values added to the raw materials while they are in the factory. Such added values constitute the real production of the manufacturing plant and are alone available for payment of salaries and wages, interest, rent and taxes, repairs, and all other overhead charges that ordinarily must be met. The percentage declined steadily with the increasing manufacturing production from 1924 to 1929, while from 1931 to 1935 and again in 1938 and 1939, due to decreased industrial activity, the percentage of salaries to value added was above normal. It should be borne in mind, however, that salaried employees increased 153 p.c. during the period 1924-42 while wage-earners increased but 133 p.c. The percentage of wages has fluctuated much less than that of salaries. The number of wage-earning employees may be more rapidly adjusted to the activity of the industry and wage levels likewise may be more readily adjusted to the price levels of the products.

¹ Equivalent to "net value of products"; see footnote 1, Table 1, p. 7

Subsection 4.—Size of Manufacturing Establishments

The size of the manufacturing establishment is generally measured either by the value of product, or by the number of employees, but each of these methods has its limitations. The latter takes no account of the differences in capital equipment at different times or in various industries and obviously the increased use of machinery, as in the flour-milling industry, may lead to an increase in production concurrently with a decrease in the number of employees. The former measure has to be adjusted for changes in the price level; and, as between industries, it makes those in which the cost of raw materials is relatively high, appear to operate on a larger scale.

Size as measured by Gross Value of Products.—While in 1922 the 420 establishments each producing over \$1,000,000 had an aggregate value of products of \$1,268,056,129 or 51 p.c. of the total production of all manufacturing industries, the 719 establishments producing over \$1,000,000 each in 1929 had an aggregate value of products of \$2,516,064,954, or 62 p.c. of the grand total for all manufacturing establishments—a very significant change in the short period of eight years. In 1931, however, the number of plants with a production of over \$1,000,000 dropped again to 482, their output being valued at \$1,451,658,954, or 53 p.c. of the total. With the increased production resulting from war needs, the number of plants with a production of \$1,000,000 or over jumped to 1,201 in 1942, and their output was about 73 p.c. of the total value of manufactures.

¹ Includes the production of central electric stations and the dyeing, cleaning and laundry industry.

² Exclusive of Yukon and Northwest Territories.

Size of Establishment as Measured by Number of Employees.—In 1923, establishments employing 501 hands or over accounted for 21·4 p.c. of the total number of employees engaged in manufacturing. By 1929 the proportion had increased to 27·3 p.c. of the total, thereby showing the increasing concentration of production into larger units. This tendency, however, was checked by the depression, the percentage having dropped in 1933 to 20·5 p.c. (central electric stations included). With the recovery in production since 1933 the percentage has risen again, and in 1939 stood at 25·6. The same also holds true for establishments employing 101 hands or over. In 1923 they employed 58·6 p.c. of the total, in 1929, 61·9 p.c., in 1933, 55·7 p.c., and in 1939, 61·5 p.c.

The impact of the War on the concentration of war industries into large units is illustrated by the increase in the number of establishments employing 500 hands or over. In 1939 such establishments numbered 172 and employed 25·6 p.c. of the total number of employees engaged in manufacturing. By 1942 the number had increased to 359 and the percentage of the total employees to 45·9. In a further subdivision of this last group in 1942, it was found that 217 establishments employed between 500 and 999 persons, 56 employed between 1,000 and 1,499, and 86 employed over 1,500 persons. The largest plant reported the employment of 14,000 persons, with the second largest reporting over 12,000 and the third largest 10,000 persons.

Size of Establishment in Leading Industries.—Table 33 summarizes the degree of concentration in some of the leading industries of Canada. This concentration is analysed in detail for each of these twenty-five industries in Table 34. Concentration is extremely marked in the case of automobiles, railway rolling-stock, aircraft, cotton yarn and cloth, shipbuilding and repairs, miscellaneous chemical products, non-ferrous metal smelting and refining, and pulp and paper; whereas in the case of bread and other bakery products, women's factory clothing, butter and cheese, and sawmills, the degree of concentration is low. With regard to flour and feed mills, concentration is high in the case of flour mills, but the small size of the average feed mill offsets this for the industry as a whole.

33.—Percentage Importance of Establishments, each Employing 200 or more Persons in the Twenty-Five Leading Industries, 1942

Subsection 5.—Power and Fuel

Power.—Power equipment installed in manufacturing establishments is a very good barometer of the industrial development of Canada, inasmuch as production is increasingly dependent on power equipment. Increases and decreases in productive capacity, measured in horse-power, are not the result of temporary fluctuations in costs and values in the same manner as capital investments, values of products, etc. Of course, power equipment installed is not a measure of the actual utilization of power for there is generally an excess over actual requirements, i.e., over power equipment in operation. Producers must have an installed operating margin in excess of normal requirements to provide for booming business conditions or break-down of part of the plant; in times of depression this margin increases. Then, too, the practice in factories, etc., of installing individual motors to each machine in place of large central motors increases total installed capacity. If spare or idle machinery could be deducted from total installation over a long period of time, the resultant data would be more informative. Reports of such spare or idle equipment are available, however, only since 1934, and the percentage of equipment not in regular use has been approximately the same each year, viz., about 6 p.c. Power equipment figures, unless such deductions can be made over a long term, will not reflect temporary depressions.

Electric motors in the manufacturing industries operated by purchased power are included with primary power equipment and consequently the central electric stations producing the power are not included as manufacturing industries. Electric motors operated by power generated within these industries are not included in Table 35 with the primary power equipment that produces the power to operate them but they are shown separately, together with the total of all electric motors for each year. These totals indicate the rate of growth of electric drive in these industries in Canada, which has increased from 61.3 p.c. of the total power equipment in 1923 to 82 p.c. in 1942.

Of the total increase in power equipment employed in manufacturing industries since 1923, over 82 p.c. was in electric motors operated on power purchased from central electric stations. However, some sections of Canada are not well provided

with water power and in such sections primary power derived from steam engines or turbines, and internal combustion engines—which include all gasoline engines, gas engines (natural, coal, and producer gas), and compression-ignition engines—has also increased rapidly during the period covered. During the period 1923–42 there was an increase of 26 p.c. in the capacity of water wheels, 67 p.c. in the capacity of steam engines, while the capacity of electric motors and internal combustion engines more than quadrupled during the same period.

In the Provinces of Prince Edward Island, Nova Scotia, New Brunswick, Saskatchewan, and Alberta, primary power produced from fuels is an important factor in power utilization.

Fuel and Electricity.—Fuel is used quite generally throughout the industrial field for the generation of power by means of steam and internal combustion engines. It is also used for the heating of plants, and for providing the heat necessary to some manufacturing processes. The most important industries where heat is applied to the materials to facilitate or accomplish the desired transformation are foundries and machine shops, brick, tile, lime, and cement-making, petroleum refining, the glass industry, distilleries, food preparation, rubber goods, etc. Fuel used for such heating purposes, as well as for power, is included in the figures of Table 36. In addition to the electricity used for ordinary power purposes, the figures include also the electricity used for heating boilers in the pulp and paper industry. Consumption of surplus energy in electric boilers increased rapidly during the years preceding the present war.

The figures of the table do not include coke charged to iron-blast furnaces or foundry cupolas. Neither do they include fuels that constitute the raw materials to be transformed as coal in the coke and gas industries and crude petroleum in the refining industry.

The value of fuel consumed increased 126 p.c. from 1924 to 1942. Electricity, on the other hand, has increased during the same period by 355 p.c., although there has been a decline in the average unit cost of electricity as there has been in the case of fuels.

The groups of industries in which fuel was most extensively used in 1942 were: iron and its products, wood and paper products, non-metallic mineral products and non-ferrous metals.

Quebec is the largest user of electric power, using about half of the Dominion total in 1942.

¹ Includes gasoline and kerosene.² Includes fuel and electricity used in smelters for metallurgical purposes.

PART II.—PROVINCIAL AND LOCAL DISTRIBUTION OF MANUFACTURING PRODUCTION

This Part of the report is introduced by a general analysis of the concentration of the manufacturing industries in the provinces. In the sections that follow, the principal features of the manufactures of each province are brought out and finally the distribution of manufacturing throughout the principal cities and towns of the Dominion is shown.

Ontario and Quebec are by far the most important manufacturing provinces of Canada. Their combined production in 1942 amounted to \$6,150,700,000 or over 81 p.c. of the gross value of manufactured products of the Dominion. The proximity of Ontario to the coalfields of Pennsylvania, the water power and other varied resources of the two provinces, and their nearness to the larger markets of Canada and the United States have all contributed to the above result.

Table 1 shows the outstanding predominance of Ontario and Quebec in each industrial group. Quebec leads in the manufacture of textiles, but in each of the other groups Ontario has the greater production. The standing of these two provinces is most nearly approached by British Columbia in the case of the wood and paper products group, where the latter province accounts for 16.5 p.c. of the gross production compared with 37.2 p.c. for Ontario and 33.5 p.c. for Quebec; in each of the other groups the positions of Ontario and Quebec lead by a wide margin. Previous to 1941, Table 1 has shown the value of production in each province, by industry. With the establishment of many vital war plants throughout Canada, it is not now possible to publish this detail, and the provincial distribution by groups instead of by industries is now given. In this way the publication of figures relating to individual establishments has, in many cases, been avoided.

Table 2 analyses the principal manufacturing statistics in each province, by size of establishment. Ontario with 184 plants employing 500 or more persons had the largest number of such establishments of any province. Quebec was second with 123 and British Columbia third with 22. The degree of concentration of manufacturing production in large units is illustrated in the statement below. In the Province of Quebec 50.1 p.c. of all persons engaged in manufacturing were employed in establishments having 500 or more employees, as compared with 45.9 p.c. for Canada as a whole. Ordinarily, Ontario ranks second in the concentration of manufacturing production. In 1942, however, British Columbia with 47.2 p.c. came second, this being due to the large shipbuilding plants located there. Ontario ranked third with a percentage of 46.7, followed by Nova Scotia with 35.7, Manitoba 32.9, New Brunswick 29.5, and Alberta 14.4.

CONCENTRATION OF MANUFACTURING PRODUCTION IN EACH PROVINCE, 1942

Section 1.—The Manufactures of the Maritime Provinces, 1942

In Prince Edward Island the predominant agricultural and fishery resources make butter and cheese, fish-curing and packing, and slaughtering and meat packing the leading manufactures of the Province. Nova Scotia is renowned for its coal mines and its fisheries, as well as extensive forests and agricultural lands and is favoured with easy access by sea to the high-grade iron-ore supply of Newfoundland. On these resources are based the leading manufactures of primary iron and steel, shipbuilding and repairs, fish-curing and packing, sawmills, pulp and paper, and butter and cheese. In addition to this, important petroleum refineries and coke and gas plants add to the diversification of manufacturing in the Province. The forests of New Brunswick give a leading place to its pulp and paper and saw-milling industries, although fish and agricultural products add to the varied output. Sugar refining and the production of railway rolling-stock also forms an important branch of manufacturing production.

¹ Net value is derived from gross value by deducting cost of materials, fuel and electricity.² Individual statistics cannot be given because there are fewer than three establishments in each industry. Such industries are: in Prince Edward Island; cotton and jute bags, iron castings, slaughtering and meat packing, fertilizers, and sheet metal products; in Nova Scotia; sugar refineries, cotton yarn and cloth, wire and wire goods, coke and gas, and petroleum products; in New Brunswick; sugar refineries, railway rolling-stock, cotton yarn and cloth, and silk and artificial silk goods.

Section 2.—The Manufactures of Quebec, 1942

Among the assets of Quebec that have tended to develop manufacturing industries in the Province may be mentioned its natural resources of forests, water powers, minerals, and agricultural lands, and also its geographic position astride the St. Lawrence estuary permitting sea-going shipping to reach its main centres of population. Added to these natural advantages, there is a stable and industrious population, which is an important factor in industries such as textiles, clothing, boots and shoes, etc., where a large labour force is required.

The most notable change among the manufactures of Quebec in recent years has been the development of the non-ferrous metal smelting industry. This industry first appeared among the forty leading industries of the Province in nineteenth place in 1927. It has been in second place since 1935, and was in first place in 1942.

Quebec, with about 31 p.c. of the Dominion output, is the second largest manufacturing province. The production of pulp and paper is normally the dominant industry, but in 1942 it was displaced by the non-ferrous metal smelting and refining industry for the premier position. In addition to supplying about 7 p.c. of the gross value of Quebec manufactures, the pulp and paper industry furnishes about 50 p.c. of the Dominion total for this industry. The value of tobacco products forms approximately 88 p.c., cotton yarn and cloth 76 p.c., women's factory clothing 68 p.c., leather boots and shoes 63 p.c., men's factory clothing 56 p.c., railway rolling-stock 52 p.c., and non-ferrous metal smelting and refining 44 p.c. of the Dominion totals of these products. The Province of Quebec is thus an outstanding manufacturing province rather on account of her large individual industries than because of the diversification of her industrial activities.

4.—Statistics of the Leading Industries of the Province of Quebec, 1942

² Statistics for sugar refining, which is also one of the leading industries of this province, cannot be published, since there are fewer than three establishments reporting.

Section 3.—The Manufactures of Ontario, 1942

The gross value of the manufactured products of Ontario in 1942 represented about 50·5 p.c. of the total for the whole Dominion, while that of Quebec amounted to about 31 p.c. This premier position in manufacturing has been fairly uniformly maintained by Ontario, as the following percentages show: 1926, 52 p.c.; 1918, 53 p.c.; 1910, 50 p.c.; 1900, 50 p.c.; 1890, 51 p.c.; and 1880, 51 p.c. In spite of the rapid industrial development in recent years in other provinces, such as Quebec, British Columbia and Manitoba, Ontario is maintaining a manufacturing production roughly equal to that of the remainder of the Dominion.

The geographic position of Ontario on the Great Lakes waterway system, by means of which the iron ore of Minnesota and the coal of Pennsylvania are readily accessible; the wide range of natural resources of forests, minerals, water powers, and agriculture; a large population and excellent water and rail transportation facilities to other parts of the country, have all encouraged industrial development. Other factors have been proximity to one of the most densely populated sections of the United States and the establishment within the Province of branch factories of United States industries, as in automobile manufacturing.

Industries producing capital or durable goods, which constitute an important factor in the manufactures of Ontario, were particularly hard hit during the early years of the depression preceding the present war. Thus, production was disproportionately curtailed in such important industries as automobiles, electrical equipment, machinery, agricultural implements, primary iron and steel, etc. This resulted in a lowering of the manufacturing production of the whole Province relatively to that of other provinces less affected by these influences. With the recovery since 1933 and the expansion in production resulting from the present war these industries in general have made good recovery, and Ontario, which accounted for 49 p.c. of the gross value of all products manufactured in the Dominion in 1933, had by 1942 increased the relative value to 50·5 p.c.

Ontario also has the greatest diversification of manufacturing production of any province. Outstanding among the industries in which this province is pre-eminent are those of automobiles, agricultural implements and starch manufacture which are carried on practically in this province alone. Other important industries in which Ontario leads, with the percentage which the production of each bears to that of the Dominion total, in 1942 are as follows: leather tanneries 88·1, rubber goods 81·3, electrical apparatus and supplies 69·9, primary iron and steel 68·5, iron castings 65·6, fruit and vegetable preparations 62·8, flour and feed mills 60·1, hosiery and knitted goods 57·2, and furniture 56·3.

Section 4.—The Manufactures of the Prairie Provinces, 1942

The leading industries of these Provinces are those based on their agricultural resources—their grain-growing, cattle-raising, and dairying areas. Next in importance, generally, are industries providing for the more necessary needs of the resident population, such as the baking of bread, printing and publishing, etc. The extensive railway services require large shops for the maintenance of rolling-stock, especially in the Winnipeg area. The widespread use of motor-vehicles and power machinery on farms has given rise to petroleum refineries in each province. The greatly increased production of crude petroleum in Alberta seems likely to lead to further development of the refining industry. Manitoba, as the early commercial centre of the prairies, has had a greater industrial development than either of the other provinces. Its natural resources of accessible water powers, forests, and, more recently, minerals, have given rise to quite a diversification of industrial production.

Considering the three Provinces as an economic group, slaughtering and meat packing had the largest gross production in 1942, amounting to \$159,028,040, followed by butter and cheese with \$50,693,218, flour and feed mills \$44,659,802, and petroleum products \$38,523,597. These four industries accounted for 52 p.c. of the total production of the Prairie Provinces. Other leading industries, in the order named, were: railway rolling-stock, bread and other bakery products, men's factory clothing, miscellaneous chemical products, breweries, sawmills, etc.

¹ See footnote 1 to Table 3, p. 66. ² Other leading industries, individual statistics of which cannot be given because there are fewer than three establishments in each industry, are: Manitoba, bridge and structural steel and non-ferrous metal smelting and refining; Alberta, malt mills, sugar refineries, wood preservation, glass, cement products, and acids, alkalies and salts.

Section 5.—The Manufactures of British Columbia, 1942

British Columbia in 1942 was again the third most important manufacturing province of the Dominion. Normally its rich forests give the wood industries a pre-eminence in the Province. Due to the exigencies of the War which resulted in the establishment of a huge shipbuilding industry on the Pacific Coast, the iron and its products group displaced wood and paper as the dominant factor in British Columbia manufacturing production. As a result, the shipbuilding industry with a gross value of production of \$118,243,552 contributed 21 p. c. of the total output of the Province. This industry was in sixth place in 1940 when the output was valued at only \$9,943,941. It also furnished employment to 23,806 persons or 26.6 p.c. of the total number engaged in manufacturing. Emphasizing the importance of the forests in the industrial life of the Province, the sawmilling industry ranked second with a gross value of production of \$90,695,092, and the pulp and paper industry fourth with \$27,804,218. Third in importance was fish-curing and packing, based principally on the estuarial salmon fisheries. British Columbia accounted for 63 p.c. of the total production of this industry in Canada. Other important industries were: slaughtering and meat packing, petroleum products, planing mills, fruit and vegetable preparations, sheet metal products, etc. The varied resources of the Province and its position on the Pacific Coast have resulted in a wide diversification of its manufactures.

¹ See footnote 1 to Table 3, p. 66.

² Includes other leading industries, statistics of which cannot be published because there are fewer than three establishments in each industry. Such industries are: aircraft, bridge and structural steel work, and non-ferrous metal smelting and refining.

Section 6.—Manufacturing Industries in Cities and Towns

The prosperity of most of the cities and towns of Canada, especially in the east, is intimately connected with their manufacturing industries, which provide employment for a large proportion of their gainfully occupied population. In the west the cities are more largely distributing centres, though manufactures are rapidly increasing there also.

Table 8, indicating the extent to which the manufacturing industries of Canada are concentrated in urban centers, shows by provinces the proportion of the gross manufacturing production contributed by cities and towns having a gross production of over \$1,000,000 each. In the more highly industrialized provinces of Ontario and Quebec such cities and towns in 1942 accounted for 92.9 p.c. and 92.0 p.c., respectively, of the totals for those provinces, while in the Maritime Provinces and British Columbia, where sawmilling, fish-packing, and dairying are leading industries, the proportions fell to 65.7 p.c. and 77.3 p.c., respectively. In the Prairie Provinces manufacturing is confined largely to a few urban centres.

8.—Cities and Towns Each with a Gross Manufacturing Production of over \$1,000,000, Number of Establishments and Total Gross Production in such Cities and Towns as a Percentage of the Grand Total, by Provinces, 1942

NOTE.—Statistics published in this table are in some cases higher than the figures published in Table 10, since, in the table below are included statistics of towns with less than three establishments and production of over \$1,000,000 each. It was not possible to publish this information, except in summary form in Table 10 without disclosing the operations of individual establishments.

Province	Cities and Towns with a Gross Production of over \$1,000,000 each	Establishments Reporting in Cities and Towns Producing over \$1,000,000 each	Total Production in Cities and Towns Producing over \$1,000,000 each	Total Production in each Province	Production in Cities and Towns as a Percentage of Total Production in each Province

¹ Net value is derived from gross value by deducting the cost of materials, fuel and electricity.

² In 1941 several counties were sub-divided as follows:—

Charlevoix.....	into	Charlevoix East and Charlevoix West.
Gaspé.....	"	Gaspé East, Gaspé West and Madeleine Islands.
Hull.....	"	Gatineau and Hull.
Lac St. Jean.....	"	Lac St. Jean East and Lac St. Jean West.
Matane.....	"	Matane and Matapédia.
Montmorency.....	"	Montmorency No. 1 and Montmorency No. 2 (Ile d'Orléans).
Montreal and Jesus Is.	"	Jesus Island and Montreal Island.
Témiscouata.....	"	Rivière-du-Loup and Témiscouata.

APPENDIX II

Alphabetical List of the Products Reported as having been Manufactured in Canada in 1942

The appended list of the products of Canadian manufacturing industries presents the value and in most cases the quantity of the individual products in a much more detailed form. Prior to 1927, in presenting statistics of manufacturing production, the whole production of an establishment was taken as a unit. This not only prevented the presentation of production figures for specific products in detail, but also involved numerous inaccuracies in the production statistics of classes of commodities, owing to the fact that commodities which may be the major line of production in one establishment may also be products of secondary importance in another establishment where the major line of production puts the establishment into a different class. The statistics which follow, however, have been compiled by taking from the individual returns of each of the 27,862 manufacturing establishments covered, the value and, when given, the quantity of each commodity specified as produced by the establishment. In this way, detailed production figures are obtained for specific commodities and furthermore the total production of each commodity is brought together, no matter how varied may be the operations in different establishments producing it. Nevertheless it should be pointed out to those making use of these figures that there is one element of incompleteness about them. In the returns of many manufacturers, products of minor importance are grouped under the name "all other products". As will be seen from the group at the end of the list, the value of products not specified, while they may appear unimportant to the individual manufacturer, are, in the aggregate, a large amount, especially in the industries of the iron and steel group. It is obvious that one manufacturer may consider a product of insufficient importance to report separately for his establishment, while that same product may be reported separately by other establishments. In other words, included in the value of other products not specified at the end of the list, there are doubtless values which, had the products been specified by the manufacturer, would have been included in the values of commodities appearing on the list. However, the products not specified total only about 1.4 per cent in value of the whole manufacturing production, although in the iron and steel group this proportion is 2.9 per cent. With the exception of this group, therefore, the incompleteness of the figures on this account, is insignificant.

There is no duplication in the listing of products, nor do any of the items include products listed in more detail under another name. It is possible, however, that essentially the same commodity produced in different establishments may have been called by different names; in such a case, which is probably a very rare one, the items would appear separately in the following list.

Footnote for page 103 (†) Does not include fabrics dyed or bleached by firms maintaining a dyeing and finishing department of their own.

CANADA

LIST OF PUBLICATIONS, CENSUS OF MANUFACTURES; DOMINION BUREAU OF STATISTICS

Manufactures

- (1) General—General Report on the Manufacturing Industries of Canada with appendix giving Alphabetical List of Products; Geographical Distribution of the Manufacturing Industries of Canada; also Reports for the Provinces and Leading Cities; Quantity of Manufacturing Production in Canada, 1923-29. Weekly Earnings of Male and Female Wage-Earners in the Manufacturing Industries of Canada.
- (2) Manufactures of Vegetable Products—Biennial General Report on Manufactures of Vegetable Products. Annual Bulletins as follows: (*a*) Coffee, Tea, Spices and Miscellaneous Foods; (*b*) Fruit and Vegetable Preparations, including Canning, Evaporating and Preserving, and Pickles, Sauces, Vinegar and Cider; (*c*) Flour and Feed Mill Products; (*d*) Bread and other Bakery Products; (*e*) Biscuits and Confectionery, including Cocoa and Chocolate; (*f*) Macaroni, Vermicelli, etc.; (*g*) Distilled Liquors; (*h*) Breweries; (*i*) Wine; (*j*) Rubber Goods, including Rubber Boots and Shoes; (*k*) Prepared Breakfast Foods; (*l*) Sugar Refineries; (*m*) Tobacco Products; (*n*) Vegetable Oil Mills; (*o*) Canned Foods; (*p*) Ice Cream; (*q*) Pack of Fruits and Vegetables, preliminary; (*r*) Aerated Waters; (*s*) Stock and Poultry Feeds; (*t*) Stocks of Unmanufactured Tobacco on hand, quarterly report; (*u*) Stocks of Canned Fruits and Vegetables, quarterly report.
- (3) Animal Products and their Manufactures—Annual Reports and Bulletins as follows: (*a*) The Dairy Factory Industry; (*b*) Processed Cheese; (*c*) Fish Processing (contained in annual Fisheries Statistics); (*d*) Slaughtering and Meat Packing and Sausage and Sausage Casings; (*e*) Leather Tanneries; (*f*) Leather Belting, Leather Boot and Shoe Findings and Miscellaneous Leather Goods; (*g*) Leather Boots and Shoes; (*h*) Leather Gloves and Mittens; (*i*) Fur Goods, Fur Dressing. Monthly Bulletin on Leather Footwear Production.
- (4) Textiles and Allied Industries—Biennial General Report on the Textile Industries of Canada. Annual Bulletins as follows: (*a*) Cotton Textiles (cloth, yarn, thread and waste); (*b*) Woollen Textiles (cloth, yarn, waste, carpets and woollen goods, n.e.s.); (*c*) Silk and Artificial Silk; (*d*) Men's Factory Clothing incl. Men's Furnishings; (*e*) Women's Factory Clothing; (*f*) Hats and Caps; (*g*) Hosiery and Knitted Goods; (*h*) Oiled and Waterproofed Clothing; (*i*) Cordage, Rope and Twine; (*j*) Corsets; (*k*) Cotton and Jute Bags; (*l*) Dyeing and Finishing of Textiles; (*m*) Awnings, Tents and Sails.
- (5) Manufactures of Forestry Products—Printed Bilingual Reports: (*a*) The Lumber Industry (biennial); (*b*) The Pulp and Paper Industry (biennial); (*c*) Wood-Using Industries (biennial); (*d*) Paper-Using Industries (biennial). Stencilled annual preliminary reports: (*a*) Lumber; (*b*) Pulp and Paper; (*c*) Wood-Using Industries; (*d*) Planing Mills and Sash and Door Factories; (*e*) Hardwood Flooring; (*f*) Furniture; (*g*) Printing Trades (Comprising the following industries: Printing and Publishing; Printing and Bookbinding; Lithographing; Engraving, Stereotyping and Electrotyping; Trade Composition and Blue Printing); (*h*) Paper Boxes and Bags. Stencilled biennial report: Lumber Distribution in Canada and the United States. Stencilled annual bulletins: (*a*) Boxes and Baskets; (*b*) Carriages, Sleighs and Vehicle Supplies; (*c*) Cooperage; (*d*) Coffins and Caskets; (*e*) Boatbuilding; (*f*) Lasts, Trees and Wooden Shoe findings; (*g*) Wood-turning; (*h*) Woodenware; (*i*) Excelsior; (*j*) Beekeepers' and Poultrymen's Supplies; (*k*) Wooden Refrigerators; (*l*) Miscellaneous Wood-Using Industries; (*m*) Roofing Paper; (*n*) Miscellaneous Paper Goods. Mimeographed Monthly Bulletins: (*a*) Asphalt Roofing Production; (*b*) Asphalt Roofing Sales.

- (6) Iron and Steel and their Products—Biennial Report. Annual Bulletins as follows: Preliminary Summary on the Iron and Steel Industry. (a) Primary Iron and Steel; (b) Iron Castings; (c) Heating and Cooking Apparatus (except boilers and radiators); (d) Boilers, Tanks and Plate work; (e) Farm Implements and Machinery; (f) Machinery; (g) Automobiles; (h) Automobile Parts; (i) Bicycles; (j) Railway Rolling Stock; (k) Wire and Wire Goods; (l) Sheet Metal Products; (m) Hardware, Tools and Cutlery; (n) Bridge Building and Structural Steel Work; (o) Shipbuilding and Ship Repairs; (p) Aircraft; (q) Miscellaneous Iron and Steel Products. Commodity Bulletins on The Production of Pig Iron; Steel; Washing Machines; Cream Separators; Warm Air Furnaces; Galvanized Sheets; Wire Nails; Steel Wire; Wire Fencing; Stoves, etc. Monthly Bulletins: (a) Pig Iron, Steel Ingots and Castings; (b) Steel Ingots; (c) Automobile Statistics*.
- (7) Manufactures of Non-Ferrous Metals—Biennial Report. Annual Bulletins as follows: Preliminary Summary on Manufactures of Non-Ferrous Metals. (a) Aluminium Products; (b) Brass and Copper Products; (c) White Metal Alloys; (d) Jewellery and Silverware; (e) Electrical Apparatus and Supplies; (f) Non-Ferrous Metal Smelting and Refining; (g) Miscellaneous Non-Ferrous Metal Goods. Quarterly Reports on Production and Sales of Radio Sets*, and Sales of Storage Batteries. Commodity Bulletins on the Production of Batteries; Silverware; Vacuum Cleaners; Electric Motors and Generators; Electric Transformers; Incandescent Lamps, etc.
- (8) Manufactures of the Non-Metallic Minerals — Biennial Report. Annual Bulletins as follows: Preliminary Summary on Manufactures of Non-Metallic Minerals. (a) Asbestos Products; (b) Cement and Cement Products; (c) Coke and Gas; (d) Glass Products; (e) Lime; (f) Petroleum Products; (g) Clay Products; (h) Salt; (i) Sand-lime Brick; (j) Stone; (k) Artificial Abrasives; (l) Gypsum and Gypsum Products; (m) Miscellaneous Non-Metallic Mineral Products, including Carbon Electrodes—Mica Products—Non-Metallic Minerals, n.e.s. Also special report on the consumption of Coke in Canada. Monthly bulletins on (a) Coke Statistics; (b) Sales of Manufactured and Natural Gas.
- (9) Chemicals and Allied Products—Biennial Report. Annual Bulletins as follows: Preliminary Summary on Chemicals and Allied Products; (a) Coal Tar Distillation; (b) Acids, Alkalies and Salts; (c) Compressed Gases; (d) Fertilizers; (e) Medicinal and Pharmaceutical Preparations; (f) Paints, Pigments and Varnishes; (g) Soaps, Cleaning Preparations and Washing Compounds; (h) Toilet Preparations; (i) Inks; (j) Adhesives; (k) Polishes and Dressings; (l) Hard Wood Distillation; (m) Miscellaneous Chemical Products, including Boiler Compounds; Plastic Products; Insecticides; Sweeping Compounds, Disinfectants; Matches; Dyes and Colours; Explosives, ammunition and fireworks; Chemical Products, n.e.s. Special Reports on the Fertilizer Trade in Canada. Commodity Bulletins on Sulphuric Acid, Ammonium Sulphate, etc. Special Report—Directory of Chemical Industries in Canada. Special Report on the Consumption of Chemicals in Municipal Waterworks.
- (10) Miscellaneous Manufactures—General Report. Annual Bulletins as follows: (a) Brooms, Brushes and Mops; (b) Musical Instruments (including pianos, organs and phonographs and Musical Instrument Materials and Parts; (c) Buttons; (d) Bed Springs and Mattresses; (e) Sporting Goods.

*Discontinued for duration.

Dominion Statistician: HERBERT MARSHALL, B.A., F.S.S.

Chief, General Manufactures Branch: A. COHEN, B. Com.

THE MANUFACTURING INDUSTRIES OF CANADA, 1943

Introduction

This report deals with manufacturing industries in Canada in two main Parts. Part I gives general analyses of manufactures in the Dominion including: the historical development of manufacturing in Canada in so far as statistical data are available; production by industrial groups and individual industries, i.e., a detailed treatment of current production under various groupings and individual industries; general analyses of the principal factors in manufacturing production under such sub-headings as capital, employment, salaries and wages, size of establishment, power and fuel. Part II deals with the provincial and local distribution of manufacturing production.

With regard to the first section of Part I, dealing with historical development, it is impossible to give absolutely comparable statistics over a long period of years. From 1870 to 1915 statistics were collected only in connection with decennial or quinquennial censuses, and there was inevitably some variation in the information collected. The annual Census of Manufactures was instituted in 1917 and, while numerous changes have been made since then in the information collected and the treatment of the data, an effort has been made to carry all major revisions, in so far as possible, back to 1917, so that the figures for the period since then are on a reasonably comparable basis.

The far-reaching influence of the War of 1914-18 was, of course, the outstanding factor in the growth recorded prior to the war now concluded. It was during these years that Canadian manufactures began to develop on a really large scale. Munitions contracts placed by the Imperial Munitions Board of Canada in those

years totalled well over \$1,000,000,000 and these did not include such fields of production as shipbuilding and aviation. Shipbuilding construction alone during the War of 1914-18 amounted to \$35,000,000 in 1917, \$75,000,000 in 1918 and \$86,000,000 in 1919. In the same three years, employees in the shipbuilding industry numbered 12,000, 22,000 and 25,000, respectively.

Canada's effort in the Second World War brought manufacturing production to a much higher level than ever before. The output of manufactured products in 1943 amounted to \$8,732,860,999 which represented an increase of 151.3 p.c. over the pre-war year of 1939, and an increase of 124.9 p.c. compared with the pre-war maximum attained in 1929. There is little doubt that the diversified development that took place during the war years will have a permanent effect on Canadian manufacturing production in the post-war period. Undoubtedly, the effects of the thorough-going transformation in industrial production will be far-reaching and will complicate the post-war readjustment in industry.

PART I.—GENERAL ANALYSES OF MANUFACTURING IN THE DOMINION

Section 1.—Growth of Manufacturing in Canada

This section gives a picture of the growth of manufacturing, in general, as shown by comparable principal statistics, i.e., establishments, capital, employees, salaries and wages paid, cost of materials, and values of products. Other useful comparisons are made in Table 4 and figures of consumption are given in Table 5. Tables 6 and 7 show volume comparisons.

1.—Historical Summary of Statistics of Manufactures for the Dominion, 1917-1943

NOTE.—Statistics of manufacturing from 1870 have been published, but between that year and 1917 they are not on a comparable basis to the series given below. They will be found in Table 1 in former editions of this report. Statistics of the non-ferrous metal smelting industries were included in manufactures for the first time in 1925.

¹ In accordance with a resolution passed by the Conference of British Commonwealth Statisticians, 1935, the net value of production is now computed by subtracting the cost of fuel and electricity as well as the cost of materials from the gross value of the products. The figures for 1924 and later years have, therefore, been revised in accordance with this resolution. The revision could not be carried farther back as statistics for cost of electricity are not available for years prior to 1924.

² A change in the method of computing the number of wage-earners in the years 1925 to 1930, inclusive, increased the number somewhat over that which the method otherwise used would have given. In 1931, however, the method in force prior to 1925 was re-adopted. The figures for 1931 and later years are, therefore, comparable with those for 1924 and earlier years.

Summary Statistics of Manufactures.—The figures in Table 4 trace the tendencies in Canadian manufacturing industries as clearly as possible through the latest period of their development. In analysing statistics of production and materials used, it should be borne in mind that, due to the inflation of values from 1914 through the immediate post-war period and the drop in prices of commodities during the depressions following 1921 and 1930, the figures for these periods are not completely comparable. One very important figure, however, which shows the trend of development clearly, is concerned with the use of power. The total horse-power employed increased from 1,658,475 in 1917 to 6,415,851 in 1943, an increase of about 287 p.c. in 26 years. In the same period, horse-power per wage-earner showed an interrupted trend from 3.06 to 10.82 in 1933 and 9.46 in 1939. With the large increase in the number of wage-earners on war production, and the more efficient utilization of the equipment available, the horse-power per wage-earner dropped to 6.12 in 1943. The significant feature is the increase in both the absolute figures of power employed and the averages per wage-earner during the depression years as compared with 1929, although the large numbers of persons again finding employment since 1933 reduced the averages for the years 1934 to 1937 and again for 1940 to 1943. Other interesting comparisons are the trend of value added by manufacture, per employee, and of average salaries and wages paid since 1929.

Consumption of Manufactured Products.—One of the beneficial results of adopting the same classification for external trade and for production is exhibited in Table 5, where the value of commodities made available for consumption in Canada is derived from these statistics. For example, the value of all manufactured commodities made available in 1943 was \$7,594,000,000, a figure obtained by adding to the value of manufactured products the value of the imports of manufactured and partly manufactured goods and deducting the value of the exports.

In past years there have always been large amounts of manufactured animal, wood and non-ferrous metal products available for consumption in Canada with considerable surplus left for export. With the commencement of the War, however, it was necessary to export more and more of such goods to the United Kingdom, and while this was done mainly by increasing production, Government control of consumption at home grew stronger as the War advanced. In the case of manufactured vegetable products, the figures for 1943 showed large excesses of exports over imports for such products as cereal foods (including flour), canned and dehydrated vegetables, etc. Excesses of imports were chiefly confined to cocoa, tea, coffee and preserved fruits and fruit juices, in which cases domestic production cannot be substituted.

On balance, Canada, in the past, imported large quantities of iron and steel, textile and non-metallic mineral products in spite of large home production. The urgent requirements for munitions of war brought about an expansion of the iron and steel, chemical and non-ferrous metals industries that will enable Canada to meet most requirements for home consumption in the future as these industries are adjusted for peacetime needs.

Averages, per wage-earner.....“	3.06	3.97	6.67	10.82	8.65	9.46	6.22	6.12

¹ A change in the method of computing the number of wage-earners in the years 1925 to 1930, inclusive, increased the number somewhat over that which the method otherwise used would have given. There was, therefore, a proportionate reduction in the averages for 1925-30 per employee and wage-earner, as compared with what these averages would have been under the other method. In 1931, however, the method in force prior to 1925 was re-adopted. The figures for 1931 and later years are, therefore, comparable with those for 1924 and earlier years.

² Net values of products; see footnote 1, Table 1.

1943.....	8,732,860,999	1,305,838,746	2,444,862,298	7,593,837,447

¹ Imports and exports of manufactured and partly manufactured goods for the years 1928 to 1938 are for the fiscal years ended Mar. 31 of the following years, while for 1939 to 1943 they are for the calendar year. Net imports are total imports less foreign products re-exported.

Section 2.—Value and Volume of Manufactured Products

Value of Manufactured Products.—In the interpretation of manufacturing values over a number of years, variations in the level of prices must be borne in mind, especially when such variations have been as great as those in the period since the annual Census of Manufactures was begun in 1917. The index number of wholesale prices in Canada, on the 1926 base, compiled by the Dominion Bureau of Statistics, stood at 114·3 in 1917, 155·9 in 1920, 97·3 in 1922, 95·6 in 1929, 67·1 in 1933, 84·6 in 1937, 75·3 in 1939 and 100·0 p.c. in 1943. Index numbers of the prices of fully or chiefly manufactured goods were: 113·5 in 1917, 156·5 in 1920, 100·4 in 1922, 93·0 in 1929, 70·2 in 1933, 80·5 in 1937, 75·3 in 1939 and 93·1 p.c. in 1943.

Volume of Manufacturing Production.—Since real income is ultimately measured in goods and services, the growth of the volume of manufacturing production, as distinguished from its value, becomes a matter of great significance. The important thing to know is whether consumers are getting more goods and services, not whether they are expending more dollars and cents.

The index of volume (Table 6) is based on the quantities of manufactured products reported. The industry indexes are weighted according to the values added by manufacture. The indexes for the years 1923-31 are based on the values added in

1926. The weights and products were changed in 1931, 1936 and then again in 1941. By changing the weights and products used in the construction of the index every five years, current changes in production are thereby reflected more accurately.

The physical volume of manufacturing production increased 50·2 p.c. from 1923 to 1929. When it is recalled that the population of Canada is estimated to have increased only 11·1 p.c. during the same period, the growth of manufacturing production is indeed remarkable. Of this advance, the part resulting from an increase in the domestic demand due to growth of population would therefore be about 11·1 p.c. Exports of partly and fully manufactured goods increased from \$591,830,000 in the fiscal year ended Mar. 31, 1924, to \$686,876,000 in the fiscal year 1930, the increase in exports representing about 3·6 p.c. of the 1923 production. The remainder of the increase in production by 1929, or a margin equal to roughly 35 p.c. of the volume of manufactures of 1923, was, therefore, apparently absorbed by increases in capital equipment and by the rise in the standard of living of the population of Canada.

A similar analysis of the volume of manufactures since 1929 in relation to population and exports would show that the decline in the depression preceding the Second World War was due chiefly to reduced exports and a cessation in production of capital equipment. As a result of the expansion in production resulting from the demands created by the War, the physical volume of production in 1943 increased by 76·6 p.c. since 1939 and by 85·1 p.c. since 1929. The chemical and allied products group, with an increase of 262·5 p.c., reported the greatest expansion in output since 1939. This was followed by the iron and its products group with an increase of 222·2 p.c., non-ferrous metal products 129·9 p.c., miscellaneous industries 68·0 p.c., non-metallic mineral products 55·6 p.c., animal products 40·4 p.c., textiles and textile products 33·7 p.c., vegetable products 24·6 p.c., and wood and paper products 21·4 p.c. There was also an increase in the volume of consumer goods. As was to be expected, the increase was not so great as that for the output of equipment and supplies needed by the Armed Forces. Drink and tobacco increased by 50·5 p.c., food 26·8 p.c., and clothing 24·7 p.c.

Section 3.—Production by Industrial Groups and Individual Industries.

For the purposes of the Census of Manufactures, the main detailed analysis is made under a classification in which industries are grouped according to the chief component materials of the goods manufactured. This is, therefore, the grouping used in Table 9, where the statistics of individual industries are presented in detail, and in the historical series shown in Table 3. However, there are also less detailed analyses under purpose groupings given in Table 10 and under origin groupings in Table 12.

Subsection 1.—Manufactures Grouped by Chief Component Materials

A classification based on the chief component materials in the various products of each manufacturing establishment was applied for the first time in the compilation of the returns for 1920. The number of groups was reduced from fifteen to nine to correspond with the external trade classification and the classes of industry were somewhat altered to conform with recent industrial developments. Subsequently, a number of minor changes were made, the most important being the elimination of central electric stations and the dyeing, cleaning and laundry industry from the compilation in 1936. Revisions due to these changes have been carried back to 1917 in so far as possible.

Recent Changes in Manufacturing Production.—Table 8 shows the effects of the depression, the recovery since 1933, and the impact of the Second World War upon the main groups of industries with regard to the numbers employed, the salaries and wages paid, and the gross value of products. Owing to the price decline during the depression, money values of both wages and products were naturally affected more than number of employees. Furthermore, during periods of curtailed production there is a tendency for wage-earners to be put on part time, while the number of salaried employees responds less quickly to reduction in output than that of wage-earners. Therefore, there are several reasons why the variation in number of employees should be less than that of money values. The figures of Table 8 are to be compared with those of Table 6 which show changes in volume of production. Compared with 1939, the number of employees in 1943 increased by 88.6 p.c. as compared with an increase of 76.6 p.c. in the physical volume of production. Salaries and wages paid were 169.3 p.c. higher and the gross value of production 151.3 p.c. higher. Another significant change is the increase in the proportion of women engaged in manufacturing. Whereas in 1939, there were 281 females to every 1,000 males employed, in 1943 this figure jumped to 392.

8.—Percentage Variation in Employment, Salaries and Wages, and Gross Value of Products in the Main Industrial Groups Compared for Significant Years, 1929-43

NOTE.—The highest pre-depression year was 1929, while the lowest depression year was 1933.

Industrial Group	1933 Compared with 1929			1939 Compared with 1929			1943 Compared with 1939

Detailed Statistics by Groups and Individual Industries.—Table 9 presents for the year 1943 detailed statistics regarding the individual industries under which all industrial plants in the Dominion are classified. The industries are further assembled under nine main groups according to the principal component material of their products.

The incidence of the War resulted in a rearrangement in the rank of many industries. Industries producing supplies and equipment for the Armed Forces naturally advanced while those industries producing for the domestic consumer market declined in importance. To supply the raw materials needed by the industries engaged principally in war production, it became necessary to restrict or prohibit the manufacture of many products such as pleasure cars, radios, washing

(Concluded on page 24)

machines, electrical equipment, household appliances, agricultural implements, etc. Though these industries were forced to change over to wartime production, the changes did not affect the value of their output and consequently their importance as producers of manufactured goods did not alter drastically. To analyse the effects of the War on any industry, it is necessary to compare the nature of the products made before the War with that of the present. This should be borne in mind in making industrial comparisons with pre-war years. For example, the number of employees engaged in the agricultural implements industry increased by 7,208 between 1940 and 1943; this in spite of the fact that the output of agricultural implements remained at about the same level. The increase was due to a change-over of some of the plants to war production. It is therefore impossible to trace industrial trends from the principal statistics alone, as published in this report.

Subsection 2.—Manufactures Classified by the Purpose of the Products

Significant changes have occurred since 1922 in the importance of the various groups shown in the purpose classification. On the basis of percentage to gross value of production, the most striking change is in the food group which showed a substantial decline from 28.2 p.c. of the total in 1922 to 22.6 p.c. in 1939 and 16.8 p.c. in 1943. The producer materials group, which took the lead from the food group in 1923, showed a steady increase up to 1939, since when it has remained at about 32 p.c. of the total. Due to the production of war equipment, vehicles and vessels increased from 7.7 p.c. in 1939 to 14.6 p.c. in 1943 and industrial equipment from 15.2 p.c. to 17.1 p.c. The other groups with the exception of "miscellaneous" showed slight declines during the war years.

10.—Principal Statistics of the Manufacturing Industries of Canada, Classified According to the Purpose of the Principal Product, by Main Groups, Significant Years 1922-43, and in Detail for 1943.

¹ For the year 1922 the figures for "Cost of Materials" and "Gross Value of Products" include the value placed on intermediate products used in further processes in the chemical group of industries. For this reason these figures differ slightly from those contained in the other tables of this report.

Table 11 has been included in order to give the amount and value of each of the principal commodities produced by the manufacturing industries of Canada. The list is not intended to be complete since a large number of commodities are produced in such small quantities that it would extend the table considerably without adding proportionately to its value to include them. The commodities listed, however, cover approximately 75 p.c. of total production. For a complete list of products, see appendix II of this report.

11.—Quantities and Values of the Principal Commodities Produced by the Manufacturing Industries of Canada, Grouped by Purpose, 1943.

Subsection 3.—Manufactures Classified by Origin of the Materials

The distinction made between farm materials of Canadian and foreign origin is based on whether the materials are indigenous to Canada rather than on their actual source. Thus, the industries included in the foreign origin classes are those depending upon materials that cannot be grown in Canada, such as tea, coffee, spices, cane sugar, rice, rubber, cotton, etc. Industries included in the Canadian origin classes may, however, be using large quantities of imported materials.

The mineral origin group includes, in addition to the non-ferrous metals, so largely produced in Canada, the manufactures of iron and steel, of petroleum, and of other mineral substances, the raw materials for which are very largely imported. Products of mineral origin, with the exception of fuels, are nearly all durable goods. A high standard of living and advanced industrial organization is usually indicated by a relatively large production and consumption of mineral products. During periods of depression when the production of capital goods is curtailed, employment in the industries of the farm group, which produce mainly consumer goods, exceeds that of the mineral group. In 1943 the industries of the mineral group had by far the greatest capital investment, employed the largest number of persons and paid out the highest amount in salaries and wages, the average capital per employee was \$5,441 and average salaries and wages \$1,831. For the industries of the farm origin group the respective averages were \$4,417 and \$1,297.

¹ For the year 1924 the figures for "Cost of Materials" and "Gross Value of Products" include the value placed on intermediate products used in further processes in the chemical group of industries. For this reason these figures differ slightly from those contained in the other tables of this report.

Subsection 4.—Leading Manufacturing Industries

In the following statement, the rank of the ten leading industries in 1943, from the standpoint of gross value of production, is compared with their respective ranks in significant years since 1922.

THE TEN LEADING INDUSTRIES, 1943, COMPARED AS TO RANK, SIGNIFICANT YEARS 1922-43

NOTE.—Where a dash is given it indicates that the industry did not rank among the forty leading industries.

Industry	Rank in—							
	1943	1942	1941	1939	1937	1933	1929	1922
Non-ferrous metal smelting and refining.....	1	1	1	1	1	2	9	—
Miscellaneous chemical products.....	2	5	19	38	—	—	—	—
Slaughtering and meat packing.....	3	2	3	3	3	3	2	3
Shipbuilding and repairs.....	4	6	17	—	—	—	—	—
Miscellaneous iron and steel products.....	5	12	36	—	—	—	—	—
Automobiles.....	6	4	4	5	4	11	4	6
Pulp and paper.....	7	3	2	2	2	1	1	2
Aircraft.....	8	18	23	—	—	—	—	—
Electrical apparatus and supplies.....	9	9	6	9	8	16	8	17
Primary iron and steel.....	10	7	7	11	12	31	16	20

A prominent feature of Canadian manufacturing development in recent years has been the rapid growth of non-ferrous metal smelting. This industry, based upon the rich base metal resources of the country, has now taken its place among the leading manufactures along with the industries based upon forest, agricultural and live-stock resources. The incidence of the depression resulted in a rearrangement in the ranking of many industries; in some cases this has proved to be temporary. Under the impetus of war production, the industries engaged in producing the equipment needed by the Armed Forces, such as shipbuilding, aircraft, automobiles, miscellaneous chemical products, and primary iron and steel, advanced to higher positions.

13.—Principal Statistics of the Forty Leading Industries of Canada, Ranked According to Gross Value of Products, 1942

¹ On a broader classification basis, the primary textile industry, which includes the production of cottons, woollens, silk, hosiery and knitted goods, and the dyeing and finishing of textiles, ranks first in number of employees, fifth in salaries and wages paid and fourth in gross value of production.

Section 4.—Principal Factors in Manufacturing Production

The subjects treated under this Section, in as much detail as limitations of space permit, include capital, employment, salaries and wages, size of establishments and power and fuel used in manufacturing.

Subsection 1.—Capital Employed

The remarkable increase in capital employed in Canadian manufactures from the beginning of the twentieth century has, of course, run parallel with the rapid growth in industrial operations. From 1900 to 1905 the capital increased from \$446,900,000 to \$833,900,000, and advanced to \$1,958,700,000 in 1915. During this period returns were received from establishments with 5 hands or over, and, while the rise in wholesale prices did not exceed 37 p.c., the capital employed in manufactures increased nearly 340 p.c.

The capital investment in 1943 in all establishments, irrespective of the number of employees, but exclusive of central electric stations, was \$6,317,000,000 as compared with \$2,334,000,000 in 1917, an increase of 171 p.c. while wholesale prices have declined about 13 p.c. in the same period.

Subsection 2.—Employment in Manufactures

Using a base and taking the percentages of the wage-earners and the total employees in each year, and dividing these percentages into the corresponding volumes of manufacturing production (see p. 15 for the index of volume), tentative conclusions are arrived at regarding the efficiency of production per wage-earner

and per employee. These indexes of the efficiency of production are, of course, affected by the changes in the method of computing the number of wage-earners adopted in 1925, and then again in 1931. Inasmuch as the change increased the apparent number of employees between 1925 and 1930, it proportionately decreased the index of the efficiency of production. Comparability exists, however, between the figures prior to 1926 and subsequent to 1930. Table 17 shows only the latter period. Unfortunately, the period covered is rather limited for the purpose in view, but it is suggested that the reader compare these data with the comparable figures for 1917-30 at p. 421 of the 1939 Canada Year Book. Up to the beginning of the Second World War the indexes may be considered as supplying satisfactory evidence of a general gain in volume of production per person employed. With the outbreak of war unemployed skilled workers were first absorbed into industry, with the result that the efficiency of production was slightly bettered. As the War progressed, however, manufacturers were forced more and more to employ unskilled workers. The decline in the efficiency of production in 1942 and 1943 may, therefore, be attributed to this cause as well as to absenteeism for various causes.

17.—Salaried Employees and Wage-Earners in Manufacturing Industries, with Volume of Manufacturing Production and Comparative Efficiency of Production, 1931-43

(1935-39=100)

NOTE.—Figures, with qualifications as to comparability, for 1917 to 1930 are published at p. 421 of the 1939 Canada Year Book.

Monthly Record of Employment in Manufactures.—Ordinarily, manufacturing employment in Canada reaches its highest point during the summer months. Some of the seasonal industries, such as canning, are most active then, textile industries are preparing winter goods, and industry generally feels the active demand of the agricultural purchasing power resulting from the prospects of the season's harvest. After the setback of 1929, employment in 1930, 1931, 1932 and the first half of 1933 declined steadily, the monthly employment figures in each case being lower than the corresponding month of the previous year. The peak of employment in June, 1929, when 575,693 wage-earners were on the payrolls, was surpassed in September, 1937, with 582,305 wage-earners. With the outbreak of war the improvement in employment became increasingly rapid. A new high record was attained in August, 1943, when 1,067,890 wage-earners were employed, an increase of 96.4 p.c. over the same month in 1939.

Hours Worked by Wage-Earners.—From 1932, the first year for which figures on hours worked per week by wage-earners are available, to 1943, each firm was required to report the number of hours worked by all its wage-earners during the month in which the greatest number had been employed, the only exception being the years 1938 and 1939 when one week in a month of normal employment was reported. In 1938 the number of hours worked per week were compiled by sex, and a change was also made in the analysis of the weekly hours worked. Since 1940 the hours worked per week include overtime while prior to that overtime was excluded. These changes make it impossible to measure accurately the changes in the number of hours worked per week. In any case, the figures in Tables 19 to 22 do not refer to any particular month, since the month of highest employment might be May for one firm and October for another; they represent the summation of the different months of highest employment as reported by all firms. For a given industry, however, the month of highest employment is more significant as in this case it coincides for a great number of firms engaged in the same industry.

For all wage-earners, the hours worked per week declined from 48.9 in 1932 to 47.2 in 1939, and reached 50.6 in 1941, some of this increase no doubt being due to the inclusion of overtime. For 1942 and 1943 there was a counter movement in the hours worked, especially among females, due to the employment of many workers on a part-time basis. Whereas in 1939 there were only 2.8 p.c. of the male and

5.3 p.c. of the female wage-earners working under 30 hours per week, in 1943 these percentages rose to 4.6 p.c. and 10.1 p.c., respectively. Also the number of hours worked by females averaged 5.6 less than the number of hours worked by their male co-workers.

19.—Wage-Earners in Manufacturing, Working Specified Numbers of Hours¹ per Week in the Month of Highest Employment, 1938-43

NOTE.—Hours worked per week in 1932-37 are given at p. 386 of the 1942 edition of the Canada Year Book; in 1940 at p. 392 of the 1943-44 edition.

¹ Includes overtime.

² Figures are exclusive of those for "butter and cheese" and "fish curing and packing"; these are among the leading industries but figures are not available.

Subsection 3.—Salaries and Wages in Manufacturing Industries

In 1943 the 27,652 establishments covered employed 193,195 salaried employees and 1,047,873 wage-earners, a total of 1,241,068 persons. Out of every 1,000 persons employed in manufacturing 156 were classed as salary earners and 844 as wage-earners; the former earned 19.6 p.c. and the latter 80.4 p.c. of the total amount paid out as remuneration for services.

A notable feature during the past few years was the reduction in the disparity between average annual salaries and wages. Whereas in 1939 average annual wages were only 55.8 p.c. of average annual salaries, in 1943 the percentage rose to 75.8. This tendency towards equalization was, in part, due to the controls adopted by the Government which tended to stabilize salaries more so than wages. The increase in average wages was also influenced by the fact that large numbers of wage-earners were employed in the highly paid iron and steel industries and by the increase in number of hours worked, some of it at overtime pay.

Ontario has a larger proportion of females among its salaried employees than the other provinces. The same situation prevails in Quebec with regard to wage-earners, due, no doubt, to the textile industries of the Province. The importance of the textile industries in providing employment to females is strikingly illustrated by the fact that of all female wage-earners engaged in the manufacturing industries of Canada, 30 p.c. were found in the textile group. Normally the percentage is much higher. In 1942 and 1943 large numbers of female wage-earners were employed in the aircraft and miscellaneous chemical industries. For this reason the percentage employed in the textile industries declined.

The average salary in 1943 amounted to \$2,013 which was \$267 or 15.3 p.c. higher than in 1939. Salaried employees in Ontario with \$2,107 received the highest salary. Quebec came second with \$1,994 and British Columbia third with \$1,935. The fact that head offices of many large corporations are located in Montreal, Toronto, Vancouver and Winnipeg tends to raise the average salaries in the provinces in which these cities are located.

23.—Salaries and Wages Paid in Manufacturing Industries, by Provinces and Industrial Groups, 1943, with Totals for Significant Years, 1917-42

¹ The averages of wage-earners and earnings for the years 1931 to 1943 are strictly comparable with those for the years up to 1925 but not with those for the intervening years. The figures for the latest years—as for the earliest—represent the earnings for complete man-years of work, with no allowance for periods of unemployment. The difference amounts only to about 3 or 4 p.c. in the total figures and affects chiefly the seasonal industries.

² The increase in the number of salaried employees in 1931 is due to the following changes in method: (1) Prior to 1931 working proprietors, such as bakers, sawmill operators, small clothing manufacturers, etc., were required to report themselves as wage-earners. In 1931 and subsequent years, however, all such proprietors reported themselves as salaried employees. (2) In 1931 travelling salesmen who were attached to the plant, and devoted all or the greater part of their time to selling the products of that plant, were included with salaried employees. Prior to this they were not reported at all.

¹For a subdivision of annual earnings of wage-earners, by sex, see Table 26.

The average wage in 1943 amounted to \$1,525 which was \$550 or 56.4 p.c. higher than in 1939. Manufacturing industries in British Columbia paid the highest average wages of \$1,799, followed by Ontario with \$1,591, Nova Scotia \$1,456, Quebec \$1,424, Saskatchewan \$1,378, etc. The high figures shown for Yukon and the Northwest Territories in regard to average wages are due to the unusual conditions under which industry is carried on in these regions and are not representative. Statistics of the distribution of employees by provinces and groups as well as average annual earnings are given in Table 23, and for a subdivision of wage-earners, by sex, see Table 26.

Average Annual Earnings in the Forty Leading Industries.—In only 6 industries did average salaries exceed \$2,500 in 1943; bridge and structural steel, pulp and paper, breweries, petroleum products, cotton yarn and cloth and automobiles. In 22 they ranged between \$2,000 and \$2,500, in 9 they ranged between \$1,500 and \$2,000, and in the remaining 3 they were below \$1,500. The lowest salaries were reported by the sawmilling and butter and cheese industries each of which includes a large proportion of small establishments.

The highest wages, those above \$1,900, were paid in 6 industries, in all of which the proportion of skilled workers is high and the proportion of female workers is low. The automobile industry with \$2,351 was the highest in this group, followed by shipbuilding and repairs with \$2,036, bridge and structural steel \$2,025, petroleum products \$1,947, miscellaneous iron and steel products \$1,946, and railway rolling-stock \$1,925. In 13 other industries average wages ranged between \$1,600 and \$1,900 in all of which the proportion of female workers is low. In 14 other industries average wages ranged between \$1,100 and \$1,600 while in the remaining 7 they were below \$1,100. The latter group includes industries made up of a large number of small establishments and in which the proportion of female workers is high. Employment by sex and average annual earnings in the 40 leading industries is given in Table 24, and annual earnings by sex in Tables 27 and 28.

24.—Salaries and Wages Paid in the Forty Leading Industries, 1943, with Comparative Figures of Average Salaries and Wages Paid in 1942

NOTE.—Industries ranked according to the aggregate salaries and wages paid. For a subdivision of annual earnings of wage-earners, by sex, see Tables 27 and 28.

Average Annual, Weekly and Hourly Earnings.—In comparing earnings by provinces or groups, consideration should be given to the type of industries in each case since the distribution of industries has very definitely a regional significance. In some industries a labour force possessing deftness and speed or the ability to exercise muscular strength is necessary, in others the labour force must exercise craftsmanship or possess a high degree of technical knowledge. Workers in these latter industries naturally command relatively higher wages than those employed in industries whose employees are routine workers.

The ranking of provinces and industries as regards annual earnings is in many cases different to that of weekly or hourly earnings since the factors of number of weeks worked per year and number of hours worked per week enter into the picture. So that, while in general the same observations apply, a close study of the differences between the averages shown in Tables 23 and 24 will be of value to the student.

The figures given in Tables 25 to 28 are based on an analysis of a pay-list covering one week in the month of highest employment. For this reason the figures do not refer to any particular month, since the month of highest employment might be May for one firm and October for another; they represent the summation of the different months of highest employment as reported by all the firms. For a particular industry, however, the month of highest employment is more significant as in such case it coincides for a great number of firms engaged in the same industry.

Average weekly earnings of male wage-earners for manufacturing as a whole amounted to \$33·80 in 1943, an increase of \$11·57 or 52·1 p.c. as compared with 1939. Average hourly earnings advanced from 46·2 cents in 1939 to 67·1 cents in 1943. Due to an increase of 2·3 hours in the working week, the increase in hourly earnings was only 45·3 p.c. Annual earnings at \$1,726 were 60·4 p.c. higher.

Female wage-earners received on an average \$19·33 per week in 1943, an increase of \$6·55 or 51·3 p.c. as compared with 1939. Hourly earnings at 43·1 cents were 52·3 p.c. higher, while annual earnings at \$987 were 59·5 p.c. higher.

Real Earnings of Employees in Recent Years.—When the index number representing the average yearly wages is divided by the index number of the cost of living, on the same base, a measure of "real" wages is obtained. Index numbers for 1931 to 1943 are given in Table 29. In 1933, the height of the depression, real wages were 88.3 on the 1935-39 base. From then on they rose steadily and stood at 139.0 in 1943, an increase of about 57 p.c.

29.—Average Yearly Earnings, and Index Numbers of Earnings, Cost of Living and Real Wages of Wage-Earners, in Manufacturing Industries, 1931-43

NOTE.—Figures on the 1917 base, with qualifications as to comparability, for 1917 to 1930 are published at p. 421 of the 1939 Canada Year Book.

Year	Wages Paid	Average Wage-Earners	Average Yearly Earnings	Index Numbers (1935-39=100)

Percentages of Salaries and Wages to Net Value of Products.—Table 30 shows the relation between salaries and wages paid by manufacturers and the total net value of production. Figures of gross production are often used in such calculations, but the values out of which the wages of employees must come in the long run are the values added to the raw materials while they are in the factory. Such added values constitute the real production of the manufacturing plant and are alone available for payment of salaries and wages, interest, rent and taxes, repairs, and all other overhead charges that ordinarily must be met. The percentage declined steadily with the increasing manufacturing production from 1924 to 1929, while from 1931 to 1935 and again in 1938 and 1939, due to decreased industrial activity, the percentage of salaries to value added was above normal. It should be borne in mind, however, that salaried employees increased 176 p.c. during the period 1924-43 while wage-earners increased but 151 p.c. The percentage of wages has fluctuated much less than that of salaries. The number of wage-earning employees may be more rapidly adjusted to the activity of the industry and wage levels likewise may be more readily adjusted to the price levels of the products. Of the increase in the net value of production since 1939 amounting to \$2,285,361,640, \$1,249,481,231 or 54.7 p.c. was passed along in increased salaries and wages.

¹ Equivalent to "net value of products"; see footnote 1, Table 1, p. 7.

Subsection 4.—Size of Manufacturing Establishments

The size of the manufacturing establishment is generally measured either by the value of product, or by the number of employees, but each of these methods has its limitations. The latter takes no account of the differences in capital equipment at different times or in various industries and obviously the increased use of machinery, as in the flour-milling industry, may lead to an increase in production concurrently with a decrease in the number of employees. The former measure has to be adjusted for changes in the price level; and, as between industries, it makes those in which the cost of raw materials is relatively high, appear to operate on a larger scale.

Size as Measured by Gross Value of Products.—While in 1922 the 420 establishments each producing over \$1,000,000 had an aggregate value of products of \$1,268,056,129 or 51 p.c. of the total production of all manufacturing industries the 719 establishments producing over \$1,000,000 each in 1929 had an aggregate value of products of \$2,516,064,954, or 62 p.c. of the grand total for all manufacturing establishments—a very significant change in the short period of eight years. In 1931, however, the number of plants with a production of over \$1,000,000 dropped again to 482, their output being valued at \$1,451,658,954, or 53 p.c. of the total. With the increased production resulting from war needs, the number of plants with a production of \$1,000,000 or over jumped to 1,287 in 1943, and their output was about 76 p.c. of the total value of manufactures.

of Yukon and the Northwest Territories.

² Exclusive

Size as Measured by Number of Employees.—In 1923, establishments employing 501 hands or over accounted for 21·4 p.c. of the total number of employees engaged in manufacturing. By 1929 the proportion had increased to 27·3 p.c. of the total, thereby showing the increasing concentration of production into larger units. This tendency, however, was checked by the depression, the percentage having dropped in 1933 to 20·5 p.c. (central electric stations included). With the recovery in production since 1933 the percentage has risen again, and in 1939 stood at 25·6. The same also holds true for establishments employing 101 hands or over. In 1923 they employed 58·6 p.c. of the total, in 1929, 61·9 p.c., in 1933, 55·7 p.c., in 1939, 61·5 p.c.

The impact of the War on the concentration of war industries into large units is illustrated by the increase in the number of establishments employing 500 hands or over. In 1939 such establishments numbered 172 and employed 25·6 p.c. of the total number of employees engaged in manufacturing. By 1943 the number had increased to 378 and the percentage of total employees to 49·0. In a further subdivision of this group in 1943 it was found that 219 establishments employed between 500 and 999 persons, 55 between 1,000 and 1,499, and 104 employed over 1,500. All told, there were 5 plants employing over 10,000 persons, all of these being engaged in war production. The largest one had an employment of a little over 14,000, with the next two employing between 11,000 and 12,000, and the fourth and fifth largest plants employing 10,000 to 11,000 persons.

Size of Establishment in Leading Industries.—Table 34 summarizes the degree of concentration in some of the leading industries of Canada. Concentration is extremely marked in the case of automobiles, railway rolling-stock, aircraft, cotton yarn and cloth, shipbuilding and repairs, miscellaneous chemical products, non-ferrous metal smelting and refining, and pulp and paper; whereas in the case of bread and other bakery products, women's factory clothing, butter and cheese, and sawmills, the degree of concentration is low. This concentration is analysed in detail for each of the twenty-five leading industries in the tables following.

34.—Percentage Importance of Establishments, each Employing 200 or more Persons in the Twenty-Five Leading Industries, 1943

Subsection 5.—Power and Fuel

Power.—Power equipment installed in manufacturing establishments is a very good barometer of the industrial development of Canada, inasmuch as production is increasingly dependent on power equipment. Increases and decreases in productive capacity, measured in horse-power, are not the result of temporary fluctuations in costs and values in the same manner as capital investments, values of products, etc. Of course, power equipment installed is not a measure of the actual utilization of power for there is generally an excess over actual requirements, i.e., over power equipment in operation. Producers must have an installed operating margin in excess of normal requirements to provide for booming business conditions or break-down of part of the plant; in times of depression this margin increases. Then, too, the practice in factories, etc., of installing individual motors to each machine in place of large central motors increases total installed capacity. If spare or idle machinery could be deducted from total installation over a long period of time, the resultant data would be more informative. Reports of such spare or idle equipment are available, however, only since 1934, and the percentage of equipment not in regular use has been approximately the same each year, viz., about 6 p.c. Power equipment figures, unless such deductions can be made over a long term, will not reflect temporary depressions.

Electric motors in the manufacturing industries operated by purchased power are included with primary power equipment and consequently the central electric stations producing the power are not included as manufacturing industries. Electric motors operated by power generated within these industries are not included in Table 36 with the primary power equipment that produces the power to operate them but they are shown separately, together with the total of all electric motors for each year. These totals indicate the rate of growth of electric drive in these industries in Canada, which has increased from 61·3 p.c. of the total power equipment in 1923 to 80·7 p.c. in 1943.

Of the total increase in power equipment employed in manufacturing industries since 1923, over 81 p.c. was in electric motors operated on power purchased from central electric stations. However, some sections of Canada are not well provided

with water power and in such sections primary power derived from steam engines or turbines, and internal combustion engines—which include all gasoline engines, gas engines (natural, coal, and producer gas), and compression-ignition engines—has also increased rapidly during the period covered. During the period 1923-43 there was an increase of 28 p.c. in the capacity of water wheels, 78 p.c. in the capacity of steam engines, while the capacity of electric motors and internal combustion engines more than quadrupled during the same period.

¹ Includes "steam engines" 673,354 h.p. and "steam turbines" 314,926 h.p.

In the Provinces of Prince Edward Island, Nova Scotia, New Brunswick, Saskatchewan, and Alberta, primary power produced from fuels is an important factor in power utilization.

Fuel and Electricity.—Fuel is used quite generally throughout the industrial field for the generation of power by means of steam and internal combustion engines. It is also used for the heating of plants, and for providing the heat necessary to some manufacturing processes. The most important industries where heat is applied to the materials to facilitate or accomplish the desired transformation are foundries and machine shops, brick, tile, lime, and cement-making, petroleum refining, the glass industry, distilleries, food preparation, rubber goods, etc. Fuel used for such heating purposes, as well as for power, is included in the figures of Table 37. In addition to the electricity used for ordinary power purposes, the figures include also the electricity used for heating boilers in the pulp and paper industry. Consumption of surplus energy in electric boilers increased rapidly during the years preceding the Second World War.

The figures of the table do not include coke charged to iron-blast furnaces or foundry cupolas. Neither do they include fuels that constitute the raw materials to be transformed as coal in the coke and gas industries and crude petroleum in the refining industry.

The value of fuel consumed increased 150 p.c. from 1924 to 1943. Electricity, on the other hand, has increased during the same period by 391 p.c., although there has been a decline in the average unit cost of electricity as there has been in the case of fuels. The groups of industries in which fuel was most extensively used in 1943 were: iron and its products, wood and paper products, non-metallic mineral products and non-ferrous metals.

Quebec is the largest user of electric power, using over half of the Dominion total in 1943.

¹ Includes gasoline and kerosene.² Includes fuel and electricity used in smelters for metallurgical purposes.

PART II.—PROVINCIAL AND LOCAL DISTRIBUTION OF MANUFACTURING PRODUCTION

This Part of the Report is introduced by a general analysis of the concentration of the manufacturing industries in the provinces. In the sections that follow, the principal features of the manufactures of each province are brought out and finally the distribution of manufacturing throughout the principal cities and towns of the Dominion is shown.

Ontario and Quebec are by far the most important manufacturing provinces of Canada. Their combined production in 1943 amounted to \$7,073,300,000 or over 81 p.c. of the gross value of manufactured products of the Dominion. The proximity of Ontario to the coalfields of Pennsylvania, the water power and other varied resources of the two provinces, and their nearness to the larger markets of Canada and the United States have all contributed to the above result.

Table 1 shows the outstanding predominance of Ontario and Quebec in each industrial group. Quebec leads in the manufacture of textiles and chemicals, but in each of the other groups Ontario has the greater production. The standing of these two provinces is most nearly approached by British Columbia in the case of the wood and paper products group, where the latter province accounts for 15.8 p.c. of the gross production compared with 37.1 p.c. for Ontario and 33.7 p.c. for Quebec; in each of the other groups the positions of Ontario and Quebec lead by a wide margin. Previous to 1941, Table 1 has shown the value of production in each province, by industry. With the establishment of many vital war plants throughout Canada, it is not possible to publish this detail, and the provincial distribution by groups instead of by industries is given. In this way the publication of figures relating to individual establishments has, in many cases, been avoided.

¹ Less than three establishments.

² Includes non-ferrous metal products.

The degree of concentration of manufacturing production in large units is illustrated in Table 2. In the Province of Quebec 55.3 p.c. of all persons engaged in manufacturing were employed in establishments having 500 or more employees, as compared with 51.0 p.c. for Canada as a whole. Ordinarily, Ontario ranks second in the concentration of manufacturing production. In 1942, however, British Columbia with 47.2 p.c. came second, this being due to the large shipbuilding plants located there. In 1943 Ontario resumed her normal position in second place with 53.6 p.c., while British Columbia came third with 44.7 p.c., followed by Nova Scotia with 43.2 p.c., Manitoba 35.7 p.c., New Brunswick 35.4 p.c. and Alberta 27.9 p.c.

Section 1.—The Manufactures of the Maritime Provinces, 1943

In Prince Edward Island the predominant agricultural and fishery resources make butter and cheese, fish-curing and -packing, and slaughtering and meat packing the leading manufactures of the Province. Nova Scotia is renowned for its coal mines and its fisheries, as well as extensive forests and agricultural lands and is favoured with easy access by sea to the high-grade iron-ore supply of Newfoundland. On these resources are based the leading manufactures of primary iron and steel, shipbuilding and repairs, fish-curing and -packing, sawmills, pulp and paper, and butter and cheese. In addition to this, important petroleum refineries and coke and gas plants add to the diversification of manufacturing in the Province. The forests of New Brunswick give a leading place to its pulp and paper and saw-milling industries, although fish and agricultural products add to the varied output. Sugar refining and the production of railway rolling-stock also form important branches of manufacturing production.

¹ Net value is derived from gross value by deducting cost of materials, fuel and electricity.

² Individual statistics cannot be given because there are fewer than three establishments in each industry. Such industries are: in Prince Edward Island; slaughtering and meat packing, iron castings, sheet metal products, fertilizers, cotton and jute bags; in Nova Scotia; cotton yarn and cloth, aircraft, miscellaneous iron and steel products, wire, coke and gas and petroleum; in New Brunswick; sugar refineries, railway rolling-stock, cotton yarn and cloth, silk and artificial silk goods.

Section 2.—The Manufactures of Quebec, 1943

Among the assets of Quebec that have tended to develop manufacturing industries in the Province may be mentioned its natural resources of forests, water powers, minerals, and agricultural lands, and also its geographic position astride the St. Lawrence estuary permitting sea-going shipping to reach its main centres of population. Added to these natural advantages, there is a stable and industrious population, which is an important factor in industries such as textiles, clothing, boots and shoes, etc., where a large labour force is required.

The most notable change among the manufactures of Quebec in recent years has been the development of the non-ferrous metal smelting industry. This industry first appeared among the forty leading industries of the Province in nineteenth place in 1927. It has been in second place since 1935, with the exception of 1942 when it was in first place.

Quebec, with about 33 p.c. of the Dominion output, is the second largest manufacturing province. The production of pulp and paper is normally the dominant industry, but in 1943 it was displaced by the miscellaneous chemical products industry for the premier position. In addition to supplying about 6 p.c. of the gross value of Quebec manufactures, the pulp and paper industry furnishes about 48 p.c. of the Dominion total for this industry. The value of tobacco products forms approximately 88 p.c., cotton yarn and cloth 75 p.c., women's factory clothing 68 p.c., leather boots and shoes 65 p.c., men's factory clothing 57 p.c., railway rolling-stock 54 p.c., and non-ferrous metal smelting and refining 51 p.c. of the Dominion totals of these products. The Province of Quebec is thus an outstanding manufacturing province rather on account of her large individual industries than because of the diversification of her industrial activities.

5.—Statistics of the Leading Industries of the Province of Quebec, 1943

² Statistics for sugar refining, which is also one of the leading industries of this province, cannot be published, since there are fewer than three establishments reporting.

Section 3.—The Manufactures of Ontario, 1943

The gross value of the manufactured products of Ontario in 1943 represented about 48 p.c. of the total for the whole Dominion, while that of Quebec amounted to about 33 p.c. This premier position in manufacturing has been fairly uniformly maintained by Ontario, as the following percentages show: 1926, 52 p.c.; 1918, 53 p.c.; 1910, 50 p.c.; 1900, 50 p.c.; 1890, 51 p.c.; and 1880, 51 p.c. In spite of the rapid industrial development in recent years in other provinces, such as Quebec, British Columbia and Manitoba, Ontario is maintaining a manufacturing production roughly equal to that of the remainder of the Dominion.

The geographic position of Ontario on the Great Lakes waterway system, by means of which the iron ore of Minnesota and the coal of Pennsylvania are readily accessible; the wide range of natural resources of forests, minerals, water powers, and agriculture; a large population and excellent water and rail transportation facilities to other parts of the country, have all encouraged industrial development. Other factors have been proximity to one of the most densely populated sections of the United States and the establishment within the Province of branch factories of United States industries, as in automobile manufacturing.

Industries producing capital or durable goods, which constitute an important factor in the manufactures of Ontario, were particularly hard hit during the early years of the depression preceding the Second World War. Thus, production was disproportionately curtailed in such important industries as automobiles, electrical equipment, machinery, agricultural implements, primary iron and steel, etc. This resulted in a lowering of the manufacturing production of the whole Province relatively to that of other provinces less affected by these influences. With the recovery since 1933 and the expansion in production resulting from the Second World War these industries in general have made good recovery, and Ontario, which accounted for 49 p.c. of the gross value of all products manufactured in the Dominion in 1933, had by 1942 increased the relative value to 50.5 p.c. In 1943 the percentage dropped again to 48.3, thus indicating a relatively greater expansion of war production in other provinces.

Ontario also has the greatest diversification of manufacturing production of any province. Outstanding among the industries in which this Province is pre-eminent are those of automobiles, agricultural implements and starch manufacture which are carried on practically in this Province alone. Other important industries in which Ontario leads, with the percentage which the production of each bears to that of the Dominion total, in 1943 are as follows: leather tanneries 88, rubber goods 77, primary iron and steel 71, electrical apparatus and supplies 69, fruit and vegetable preparations 62, castings, iron, 61, flour and feed mills 58, furniture 57, and hosiery and knitted goods 56.

Section 4.—The Manufactures of the Prairie Provinces, 1943

The leading industries of these Provinces are those based on their agricultural resources—their grain-growing, cattle-raising, and dairying areas. Next in importance, generally, are industries providing for the more necessary needs of the resident population, such as the baking of bread, printing and publishing, etc. The extensive railway services require large shops for the maintenance of rolling-stock, especially in the Winnipeg area. The widespread use of motor-vehicles and power machinery on farms has given rise to petroleum refineries in each province. The greatly increased production of crude petroleum in Alberta seems likely to lead to further development of the refining industry. Manitoba, as the early commercial centre of the prairies, has had a greater industrial development than either of the other provinces. Its natural resources of accessible water powers, forests, and, more recently, minerals, have given rise to quite a diversification of industrial production.

Considering the three Prairie Provinces as an economic group, slaughtering and meat packing had the largest gross value of production in 1943, amounting to \$213,029,871, followed by flour and feed mills with \$61,866,161, butter and cheese \$55,722,185, petroleum products \$39,919,567, and railway rolling-stock \$21,558,745. These five industries accounted for about 60 p.c. of the total production of the Prairie Provinces. Other leading industries, in the order named, were: bread and other bakery products, miscellaneous iron and steel products, sawmills, breweries, miscellaneous foods, men's factory clothing, etc.

¹ See footnote 1 to Table 3, p. 7.² Other leading industries, individual statistics for which cannot be given because there are fewer than three establishments in each industry are: Manitoba, bridge and structural steel, non-ferrous metal smelting and refining and pulp and paper; Saskatchewan, non-ferrous metal smelting and refining, miscellaneous iron and steel products, and bags, cotton and jute; Alberta, cement, glass products, miscellaneous iron and steel products, primary iron and steel, wood preservation, malt and malt products, sugar refineries, acids, alkalies and salts and cheese, processed.

Section 5.—The Manufactures of British Columbia, 1943

British Columbia in 1943 was again the third most important manufacturing province of the Dominion. Normally its rich forests give the wood industries a pre-eminence in the Province. Due to the exigencies of the War which resulted in the establishment of a huge shipbuilding industry on the Pacific Coast, the iron and its products group displaced wood and paper as the dominant factor in British Columbia manufacturing production. As a result, the shipbuilding industry with a gross value of production of \$155,536,396 contributed 24 p.c. of the total output of the Province. This industry was in sixth place in 1940 when the output was valued at only \$9,943,941. It furnished employment to 31,238 persons or 30.6 p.c. of the total number engaged in manufacturing in 1943. Emphasizing the importance of the forests in the industrial life of the Province, the sawmilling industry ranked second with a gross value of production of \$87,069,697, and the pulp and paper industry fourth with \$28,881,845. Third in importance was fish-curing and -packing, based principally on the estuarial salmon fisheries. British Columbia accounted for 50 p.c. of the total production of this industry in Canada. Other important industries were: slaughtering and meat packing, petroleum products, planing mills, machinery, fruit and vegetable preparations, etc. The varied resources of the Province and its position on the Pacific Coast have resulted in a wide diversification of its manufactures.

8.—Statistics of the Leading Industries of the Province of British Columbia, 1943

Percentage of leading industries to total of all industries in the Province.....	57.0	81.3	84.2	86.5	83.6	84.5

¹ Net value is derived from gross value by deducting cost of materials, fuel and electricity.

² Includes other leading industries, statistics of which cannot be published because there are fewer than three establishments in each industry. Such industries are: aircraft, bridge and structural steel and non-ferrous smelting and refining.

Section 6—Manufacturing Industries in Urban Centres

The prosperity of most of the cities and towns of Canada, especially in the east, is intimately connected with their manufacturing industries, which provide employment for a large proportion of their gainfully occupied population. In the west the cities are more largely distributing centres, though manufactures are rapidly increasing there also.

Table 9, indicating the extent to which the manufacturing industries of Canada are concentrated in urban centres, shows by provinces the proportion of the gross manufacturing production contributed by cities and towns having a gross production of over \$1,000,000 each. In the more highly industrialized provinces of Ontario and Quebec such cities and towns in 1943 accounted for 90.8 p.c. and 90.2 p.c., respectively, of the totals for those provinces, while in the Maritime Provinces and British Columbia, where sawmilling, fish-packing, and dairying are leading industries, the proportions fell to 71.4 p.c. and 79.1 p.c., respectively. In the Prairie Provinces manufacturing is confined largely to a few urban centres.

9.—Cities and Towns Each with a Gross Manufacturing Production of Over \$1,000,000. Number of Establishments and Total Gross Production in such Urban Centres as a Percentage of the Grand Total, by Provinces, 1943.

NOTE.—Statistics published in this table are in some cases higher than the figures published in Table 11, since, in the table below are included statistics of towns with less than three establishments and production of over \$1,000,000 each. It was not possible to publish this information, except in summary form in Table 11 without disclosing the operations of individual establishments.

Province	Urban Centres with a Gross Production of over \$1,000,000 each	Establishments Reporting in Urban Centres Producing over \$1,000,000 each	Total Production in Urban Centres Producing over \$1,000,000 each	Total Production in each Province	Production in Urban Centres as a Percentage of Total Production in each Province

APPENDIX II

Alphabetical List of the Products Reported as having been Manufactured in Canada in 1943

The appended list of the products of Canadian manufacturing industries presents the value and in most cases the quantity of the individual products in a much more detailed form. Prior to 1927, in presenting statistics of manufacturing production, the whole production of an establishment was taken as a unit. This not only prevented the presentation of production figures for specific products in detail, but also involved numerous inaccuracies in the production statistics of classes of commodities, owing to the fact that commodities which may be the major line of production in one establishment may also be products of secondary importance in another establishment where the major line of production puts the establishment into a different class. The statistics which follow, however, have been compiled by taking from the individual returns of each of the 27,652 manufacturing establishments covered, the value and, when given, the quantity of each commodity specified as produced by the establishment. In this way, detailed production figures are obtained for specific commodities and furthermore the total production of each commodity is brought together, no matter how varied may be the operations in different establishments producing it. Nevertheless it should be pointed out to those making use of these figures that there is one element of incompleteness about them. In the returns of many manufacturers, products of minor importance are grouped under the name "all other products". As will be seen from the group at the end of the list, the value of products not specified, while they may appear unimportant to the individual manufacturer, are, in the aggregate, a large amount, especially in the industries of the iron and steel group. It is obvious that one manufacturer may consider a product of insufficient importance to report separately for his establishment, while that same product may be reported separately by other establishments. In other words, included in the value of other products not specified at the end of the list, there are doubtless values which, had the products been specified by the manufacturer, would have been included in the values of commodities appearing on the list. However, the products not specified total only about 1.7 per cent in value of the whole manufacturing production, although in the iron and steel group this proportion is 3.3 per cent. With the exception of this group, therefore, the incompleteness of the figures on this account, is insignificant.

There is no duplication in the listing of products, nor do any of the items include products listed in more detail under another name. It is possible, however, that essentially the same commodity produced in different establishments may have been called by different names; in such a case, which is probably a very rare one, the items would appear separately in the following list.

Weekly Earnings of Male and Female Wage-Earners in the Manufacturing Industries of Canada.
- (2) Manufactures of Vegetable Products—Biennial General Report on Manufactures of Vegetable Products. Annual Bulletins as follows: (*a*) Coffee, Tea, Spices and Miscellaneous Foods; (*b*) Fruit and Vegetable Preparations, including Canning, Evaporating and Preserving, and Pickles, Sauces, Vinegar and Cider; (*c*) Flour and Feed Mill Products; (*d*) Bread and other Bakery Products; (*e*) Biscuits and Confectionery, including Cocoa and Chocolate; (*f*) Macaroni, Vermicelli, etc.; (*g*) Distilled Liquors; (*h*) Breweries; (*i*) Wine; (*j*) Rubber Goods, including Rubber Boots and Shoes; (*k*) Prepared Breakfast Foods; (*l*) Sugar Refineries; (*m*) Tobacco Products; (*n*) Vegetable Oil Mills; (*o*) Canned Foods; (*p*) Ice Cream; (*q*) Pack of Fruits and Vegetables, preliminary; (*r*) Aerated Waters; (*s*) Stock and Poultry Feeds; (*t*) Stocks of Unmanufactured Tobacco on hand, quarterly report; (*u*) Stocks of Canned Fruits and Vegetables, quarterly report.
- (3) Animal Products and their Manufactures—Annual Reports and Bulletins as follows: (*a*) The Dairy Factory Industry; (*b*) Processed Cheese; (*c*) Fish Processing (contained in annual Fisheries Statistics); (*d*) Slaughtering and Meat Packing and Sausage and Sausage Casings; (*e*) Leather Tanneries; (*f*) Leather Belting, Leather Boot and Shoe Findings and Miscellaneous Leather Goods; (*g*) Leather Boots and Shoes; (*h*) Leather Gloves and Mittens; (*i*) Fur Goods, Fur Dressing. Monthly Bulletin on Leather Footwear Production.
- (4) Textiles and Allied Industries—Biennial General Report on the Textile Industries of Canada. Annual Bulletins as follows: (*a*) Cotton Textiles (cloth, yarn, thread and waste); (*b*) Woollen Textiles (cloth, yarn, waste, carpets and woollen goods, n.e.s.); (*c*) Silk and Artificial Silk; (*d*) Men's Factory Clothing incl. Men's Furnishings; (*e*) Women's Factory Clothing; (*f*) Hats and Caps; (*g*) Hosiery and Knitted Goods; (*h*) Oiled and Waterproofed Clothing; (*i*) Cordage, Rope and Twine; (*j*) Corsets; (*k*) Cotton and Jute Bags; (*l*) Dyeing and Finishing of Textiles; (*m*) Awnings, Tents and Sails.
- (5) Manufactures of Forestry Products—Printed Bilingual Reports: (*a*) The Lumber Industry (biennial); (*b*) The Pulp and Paper Industry (biennial); (*c*) Wood-Using Industries (biennial); (*d*) Paper-Using Industries (biennial). Stencilled annual preliminary reports: (*a*) Lumber; (*b*) Pulp and Paper; (*c*) Wood-Using Industries; (*d*) Planing Mills and Sash and Door Factories; (*e*) Hardwood Flooring; (*f*) Furniture; (*g*) Printing Trades (Comprising the following industries: Printing and Publishing; Printing and Bookbinding; Lithographing; Engraving, Stereotyping and Electrotyping; Trade Composition and Blue Printing); (*h*) Paper Boxes and Bags. Stencilled biennial report: Lumber Distribution in Canada and the United States. Stencilled annual bulletins: (*a*) Boxes and Baskets; (*b*) Carriages, Sleighs and Vehicle Supplies; (*c*) Cooperage; (*d*) Coffins and Caskets; (*e*) Boatbuilding; (*f*) Lasts, Trees and Wooden Shoe findings; (*g*) Wood-turning; (*h*) Woodenware; (*i*) Excelsior; (*j*) Beekeepers' and Poultrymen's Supplies; (*k*) Wooden Refrigerators; (*l*) Miscellaneous Wood-Using Industries; (*m*) Roofing Paper; (*n*) Miscellaneous Paper Goods. Mimeographed Monthly Bulletins: (*a*) Asphalt Roofing Production; (*b*) Asphalt Roofing Sales.

- (6) Iron and Steel and their Products—Biennial Report. Annual Bulletins as follows: Preliminary Summary on the Iron and Steel Industry. (a) Primary Iron and Steel; (b) Iron Castings; (c) Heating and Cooking Apparatus (except boilers and radiators); (d) Boilers, Tanks and Plate work; (e) Farm Implements and Machinery; (f) Machinery; (g) Automobiles; (h) Automobile Parts; (i) Bicycles; (j) Railway Rolling Stock; (k) Wire and Wire Goods; (l) Sheet Metal Products; (m) Hardware, Tools and Cutlery; (n) Bridge Building and Structural Steel Work; (o) Shipbuilding and Ship Repairs; (p) Aircraft; (q) Miscellaneous Iron and Steel Products. Commodity Bulletins on The Production of Pig Iron; Steel; Washing Machines; Cream Separators; Warm Air Furnaces; Galvanized Sheets; Wire Nails; Steel Wire; Wire Fencing; Stoves, etc. Monthly Bulletins: (a) Pig Iron, Steel Ingots and Castings; (b) Steel Ingots; (c) Automobile Statistics*.
- (7) Manufactures of Non-Ferrous Metals—Biennial Report. Annual Bulletins as follows: Preliminary Summary on Manufactures of Non-Ferrous Metals. (a) Aluminium Products; (b) Brass and Copper Products; (c) White Metal Alloys; (d) Jewellery and Silverware; (e) Electrical Apparatus and Supplies; (f) Non-Ferrous Metal Smelting and Refining; (g) Miscellaneous Non-Ferrous Metal Goods. Quarterly Reports on Production and Sales of Radio Sets*, and Sales of Storage Batteries. Commodity Bulletins on the Production of Batteries; Silverware; Vacuum Cleaners; Electric Motors and Generators; Electric Transformers; Incandescent Lamps, etc.
- (8) Manufactures of the Non-Metallic Minerals — Biennial Report. Annual Bulletins as follows: Preliminary Summary on Manufactures of Non-Metallic Minerals. (a) Asbestos Products; (b) Cement and Cement Products; (c) Coke and Gas; (d) Glass Products; (e) Lime; (f) Petroleum Products; (g) Clay Products; (h) Salt; (i) Sand-lime Brick; (j) Stone; (k) Artificial Abrasives; (l) Gypsum and Gypsum Products; (m) Miscellaneous Non-Metallic Mineral Products, including Carbon Electrodes—Mica Products—Non-Metallic Minerals, n.e.s. Also special report on the consumption of Coke in Canada. Monthly bulletins on (a) Coke Statistics; (b) Sales of Manufactured and Natural Gas.
- (9) Chemicals and Allied Products—Biennial Report. Annual Bulletins as follows: Preliminary Summary on Chemicals and Allied Products; (a) Coal Tar Distillation; (b) Acids, Alkalies and Salts; (c) Compressed Gases; (d) Fertilizers; (e) Medicinal and Pharmaceutical Preparations; (f) Paints, Pigments and Varnishes; (g) Soaps, Cleaning Preparations and Washing Compounds; (h) Toilet Preparations; (i) Inks; (j) Adhesives; (k) Polishes and Dressings; (l) Hard Wood Distillation; (m) Miscellaneous Chemical Products, including Boiler Compounds; Plastic Products; Insecticides; Sweeping Compounds, Disinfectants; Matches; Dyes and Colours; Explosives, ammunition and fireworks; Chemical Products, n.e.s. Special Reports on the Fertilizer Trade in Canada. Commodity Bulletins on Sulphuric Acid, Ammonium Sulphate, etc. Special Report—Directory of Chemical Industries in Canada. Special Report on the Consumption of Chemicals in Municipal Waterworks.
- (10) Miscellaneous Manufactures—General Report. Annual Bulletins as follows: (a) Brooms, Brushes and Mops; (b) Musical Instruments (including pianos, organs and phonographs and Musical Instrument Materials and Parts; (c) Buttons; (d) Bed Springs and Mattresses; (e) Sporting Goods.

* Discontinued for duration.

TABLE OF CONTENTS

	PAGE
Part I.—General Analysis of Manufacturing in the Dominion	5
Section 1. <i>Growth of Manufacturing in Canada</i>	7
1. Historical Summary of Statistics of Manufactures for the Dominion, 1917-44.....	7
2. Summary Statistics of Manufactures, by Provinces, Significant Years, 1917-44.....	8
3. Summary Statistics of Manufactures, by Industrial Groups, Significant Years, 1917-44...	10
4. Summary of Statistics of Manufactures, Significant Years, 1917-44.....	13
5. Consumption of Manufactured Products, 1928-44.....	14
Section 2. <i>Value and Volume of Manufactured Products</i>	14
6. Indexes of the Volume of Manufacturing Production, According to Component Material and Purpose Classifications, 1923-44.....	16
7. Indexes of the Volume of Manufacturing Production for the Groups of the Purpose Classification, Significant Years, 1923-44.....	17
Section 3. <i>Production by Industrial Groups and Individual Industries</i>	17
Subsection 1. Manufactures Grouped by Chief Component Materials.....	17
8. Percentage Variation in Employment, Salaries and Wages, and Gross Value of Products in the Main Industrial Groups Compared for Significant Years, 1920-44.....	18
9. Statistics of the Numbers, Employees, Salaries and Wages, Power, Fuel, Materials, and Values of Products of Canadian Manufacturing Industries, 1944.....	20
Subsection 2. Manufactures Classified by the Purpose of the Products.....	26
10. Principal Statistics of the Manufacturing Industries of Canada, Classified According to the Purpose of the Principal Product, by Main Groups, Significant Years, 1922-44 and in Detail for 1944.....	26
11. Quantities and Values of the Principal Commodities Produced by the Manufacturing Industries of Canada, Grouped by Purpose, 1944.....	29
Subsection 3. Manufactures Classified by Origin of the Materials.....	31
12. Principal Statistics of the Manufacturing Industries of Canada, Classified According to the Origin of the Materials Used, by Main Groups, Significant Years, 1924-44.....	31
Subsection 4. Leading Manufacturing Industries.....	33
13. Principal Statistics of the Forty Leading Industries of Canada, Ranked According to the Gross Value of the Products, 1943.....	34
14. Principal Statistics of the Forty Leading Industries of Canada, Ranked According to the Gross Value of the Products, 1944.....	36
Section 4. <i>Principal Factors in Manufacturing Production</i>	37
Subsection 1. Capital Employed.....	37
15. Percentage Distribution of Capital Employed in the Manufacturing Industries of Canada, by Provinces and Industrial Groups, Significant Years, 1917-43.....	37
16. Forms of Capital Employed in the Manufacturing Industries of Canada, by Provinces and Industrial Groups, 1943, with Totals for Significant Years, 1924-42.....	38
Subsection 2. Employment in Manufactures.....	38
17. Salaried Employees and Wage-Earners in the Manufacturing Industries of Canada, with Volume of Manufacturing Production and Comparative Efficiency of Production, 1931-44.....	39
18. Wage-Earners Employed in the Manufacturing Industries of Canada, by Months and Sex, Significant Years, 1922-44.....	40
19. Wage-Earners in Manufacturing Working Specified Numbers of Hours per Week in the Month of Highest Employment, 1938-44.....	41
20. Wage-Earners Working Specified Weekly Hours in the Month of Highest Employment, by Sex, Province and Industrial Group, 1944.....	42
21. Male Wage-Earners in the Forty Leading Industries Working Specified Weekly Hours in the Month of Highest Employment, 1944.....	44
22. Female Wage-Earners in the Forty Leading Industries Working Specified Weekly Hours in the Month of Highest Employment, 1944.....	45
Subsection 3. Salaries and Wages in Canadian Manufacturing Industries.....	46
23. Salaries and Wages Paid in the Manufacturing Industries of Canada, by Provinces and Industrial Groups, 1944, with Totals for Significant Years, 1917-43.....	46
24. Salaries and Wages Paid in the Forty Leading Industries, 1944, with Comparative Figures of Average Salaries and Wages Paid in 1943.....	48
25. Average Annual, Weekly and Hourly Earnings of the Male and Female Wage-Earners, 1934-44.....	50
26. Average Annual, Weekly and Hourly Earnings of Wage-Earners, Classified by Sex, Province and Industrial Group, 1944.....	51
27. The Forty Leading Industries Employing the Greatest Number of Male Wage-Earners, Ranked According to the Average Annual, Weekly and Hourly Earnings, 1944.....	52
28. The Forty Leading Industries Employing the Greatest Number of Female Wage-Earners, Ranked According to the Average Annual, Weekly and Hourly Earnings, 1944.....	53

TABLE OF CONTENTS—concluded

Director, Census of Industry and Merchandising: W. H. LOSEE.

Chief, General Manufactures Branch: A. COHEN.

THE MANUFACTURING INDUSTRIES OF CANADA, 1944

Introduction

This report deals with manufacturing industries in Canada in two main Parts. Part I gives general analyses of manufactures in the Dominion including: the historical development of manufacturing in Canada in so far as statistical data are available; production by industrial groups and individual industries, i.e., a detailed treatment of current production under various groupings and individual industries; general analyses of the principal factors in manufacturing production under such sub-headings as capital, employment, salaries and wages, size of establishment, power and fuel. Part II deals with the provincial and local distribution of manufacturing production.

With regard to the first section of Part I, dealing with historical development, it is impossible to give absolutely comparable statistics over a long period of years. From 1870 to 1915 statistics were collected only in connection with decennial or quinquennial censuses, and there was inevitably some variation in the information collected. The annual Census of Manufactures was instituted in 1917 and, while numerous changes have been made since then in the information collected and the treatment of the data, an effort has been made to carry all major revisions, in so far as possible, back to 1917, so that the figures for the period since then are on a reasonably comparable basis.

The far-reaching influence of the War of 1914-18 was, of course, the outstanding factor in the growth recorded prior to the war now concluded. It was during these years that Canadian manufactures began to develop on a really large scale. Munitions contracts placed by the Imperial Munitions Board of Canada in those years totalled well over \$1,000,000,000 and these did not include such fields of production as shipbuilding and aviation. Shipbuilding construction alone during the War of 1914-18 amounted to \$35,000,000 in 1917, \$75,000,000, in 1918 and \$86,000,000 in 1919. In the same three years, employees in the shipbuilding industry numbered 12,000, 22,000 and 25,000 respectively.

Canada's effort in the Second World War brought manufacturing production to a much higher level than ever before. The output of manufactured products in 1944 amounted to \$9,073,692,519 which represented an increase of 161 p.c. over the pre-war year of 1939, and an increase of 134 p.c. compared with the pre-war maximum attained in 1929. There is little doubt that the diversified development that took place during the war years will have a permanent effect on Canadian manufacturing production in the post-war period. Undoubtedly, the effects of the thorough-going transformation in industrial production will be far-reaching.

The food, textile and chemical industries were the first to feel the effects of the stimulated demands created by the war. With the progress of the war and its increasing demands for vehicles, aircraft and armaments of all kinds, the other groups, especially iron and non-ferrous metals, also experienced a tremendous expansion in production. For manufacturing as a whole there was an increase since 1939 of 161 p.c. in the gross value of production, 162 p.c. in the value added by manufacture, 86 p.c. in the number of persons employed and 175 p.c. in the salaries and wages paid.

The gross output of manufactured products during 1944 which was valued at \$9,073,692,519, represents an increase of \$340,831,520 or 3.9 p.c. as compared with the previous year. This increase in value was not, however, due to an increase in the physical volume of production, but to a rise in the selling value of the products made. The physical volume was actually lower than in 1943 and is reflected in a drop of 18,186 or 1.5 p.c. in the number of persons employed. Salary and wage payments nevertheless continued to rise and increased by \$42,328,986 or 2.1 p.c.

The production of aircraft continued to expand during 1944 with the result that this industry, with 79,572 persons on the payroll, was the greatest employer of labour, having displaced the shipbuilding industry from the premier position. The expanded operations of the industry also required an increase of 10,043 over 1943 in the number of employees. Other industries engaged in war production, however, operated at lower levels during 1944. Chief among these were the miscellaneous iron and its products industry with a drop of 11,604 employees, miscellaneous chemical products 10,991, shipbuilding 8,771, and brass and copper products 4,266. The food-producing industries on the other hand were more active, the slaughtering and meat-packing industry having reported an increase of 5,092 persons, fruit and vegetable preparations 3,474, miscellaneous foods 1,093, etc. The output of the rubber goods industry, which includes the production of synthetic rubber, also expanded as is reflected by an increase of 5,508 in the number of persons employed.

PART I.—GENERAL ANALYSES OF MANUFACTURING IN THE DOMINION

Section 1.—Growth of Manufacturing in Canada

Subsection 1.—Production of Manufactured Products

This section gives a picture of the growth of manufacturing, in general, as shown by comparable principal statistics, i.e., establishments, capital, employees, salaries and wages paid, cost of materials, and values of products. Other useful comparisons are made in Table 4 and figures of consumption are given in Table 5. Tables 6 and 7 show volume comparisons.

1.—Historical Summary of Statistics of Manufactures for the Dominion, 1917-1944

NOTE:—Statistics of manufacturing from 1870 have been published, but between that year and 1917 they are not on a comparable basis to the series given below. They will be found in Table 1 in former editions of this report. Statistics of the non-ferrous metal smelting industries were included in manufactures for the first time in 1925.

Year	Estab- lish- ments	Capital	Em- ployees	Salaries and Wages	Cost of Materials	Net Value of Products ¹	Gross Value of Products
	No.	\$	No.	\$	\$	\$	\$
1917.....	21,845	2,333,991,229	606,523	497,801,844	1,539,678,811	1,281,131,980	2,820,810,791

¹ In accordance with a resolution passed by the Conference of British Commonwealth Statisticians, 1935, the net value of production is now computed by subtracting the cost of fuel and electricity as well as the cost of materials from the gross value of the products. The figures for 1924 and later years have, therefore, been revised in accordance with this resolution. The revision could not be carried farther back as statistics for cost of electricity are not available for years prior to 1924.

² A change in the method of computing the number of wage-earners in the years 1925 to 1930, inclusive, increased the number somewhat over that which the method otherwise used would have given. In 1931, however, the method in force prior to 1925 was re-adopted. The figures for 1931 and later years are, therefore, comparable with those for 1924 and earlier years.

³ Not collected.

¹ See footnote 1, Table 1.² See footnote 2, Table 1.³ Information not collected.

The figures in Table 4 trace the tendencies in Canadian manufacturing industries as clearly as possible through the latest period of their development. In analysing statistics of production and materials used, it should be borne in mind that, due to the inflation of values from 1914 through the immediate post-war period and the drop in prices of commodities during the depressions following 1921 and 1930, the figures for these periods are not completely comparable. One very important figure, however, which shows the trend of development clearly, is concerned with the use of power. The total horse-power employed increased from 1,658,475 in 1917 to 6,468,439 in 1944, an increase of about 290 p.c. in 27 years. In the same period, horse-power per wage-earner showed an interrupted trend from 3.06 to 10.82 in 1933 and 9.46 in 1939. With the large increase in the number of wage-earners on war production, and the more efficient utilization of the equipment available, the horse-power per wage-earner dropped to 6.28 in 1944. The significant feature is the increase in both the absolute figure of power employed and the averages per wage-earner during the depression years as compared with 1929, although the large numbers of persons again finding employment since 1933 reduced the averages for the years 1934 to 1937 and again for 1940 to 1944. Other interesting comparisons are the trend of value added by manufacture, per employee, and of average salaries and wages paid since 1929.

Subsection 2—Consumption of Manufactured Products

One of the beneficial results of adopting the same classification for external trade and for production is exhibited in Table 5, where the value of commodities made available for consumption in Canada is derived from these statistics. For example, the value of all manufactured commodities made available in 1944 was \$7,707,530,734, a figure obtained by adding to the value of manufactured products the value of the imports of manufactured and partly manufactured goods and deducting the value of the exports.

In past years there have always been large amounts of manufactured animal, wood and non-ferrous metal products available for consumption in Canada with considerable surplus left for export. With the commencement of the War, however, it was necessary to export more and more of such goods to the United Kingdom, and while this was done mainly by increasing production, Government control of consumption at home grew stronger as the War advanced. In the case of manufactured vegetable products, the figures for 1944 showed large excesses of exports over imports for such products as cereal foods (including flour), canned and dehydrated vegetables, etc. Excesses of imports were chiefly confined to cocoa, tea, coffee and preserved fruits and fruit juices, in which cases domestic production cannot be substituted.

On balance, Canada, in the past, imported large quantities of iron and steel, textile and non-metallic mineral products in spite of large home production. The urgent requirements for munitions of war brought about an expansion of the iron and steel, chemical and non-ferrous metals industries that will enable Canada to meet most requirements for home consumption in the future.

Power employed.....	1,058,475	2,068,875	3,855,648	4,135,008	4,712,283	5,045,287	6,415,851	6,468,439
Averages, per establishment.....	76	92	174	174	190	203	232	227
Averages, per wage-earner.....	3-06	3-97	6-67	10-82	8-65	9-46	6-12	6-28

¹ A change in the method of computing the number of wage-earners in the years 1925 to 1930, inclusive, increased the number somewhat over that which the method otherwise used would have given. There was, therefore, a proportionate reduction in the averages for 1925-30 per employee and wage-earner, as compared with what these averages would have been under the other method. In 1931, however, the method in force prior to 1925 was re-adopted. The figures for 1931 and later years are, therefore, comparable with those for 1924 and earlier years.

² Not collected.

³ Net values of products; see footnote 1, Table 1.

1944.....	9,073,692,519	1,302,413,996	2,668,575,781	7,707,530,734

¹ Imports and exports of manufactured and partly manufactured goods for the years 1928 to 1938 are for the fiscal years ended Mar. 31 of the following years, while for 1939 to 1944 they are for the calendar year. Net imports are total imports less foreign products re-exported.

Section 2.—Value and Volume of Manufactured Products

Value of Manufactured Products—In the interpretation of manufacturing values over a number of years, variations in the level of prices must be borne in mind, especially when such variations have been as great as those in the period since the annual Census of Manufactures was begun in 1917. The index number of wholesale prices in Canada, on the 1926 base, compiled by the Dominion Bureau of Statistics, stood at 114.3 in 1917, 155.9 in 1920, 97.3 in 1922, 95.6 in 1929, 67.1 in 1933, 84.6 in 1937, 75.4 in 1939 and 102.5 p.c. in 1944. Index numbers of the prices of fully or chiefly manufactured goods were: 113.5 in 1917, 156.5 in 1920, 100.4 in 1922, 93.0 in 1929, 70.2 in 1933, 80.5 in 1937, 75.3 in 1939 and 93.6 p.c. in 1944.

Volume of Manufacturing Production—Since real income is ultimately measured in goods and services, the growth of the volume of manufacturing production, as distinguished from its value, becomes a matter of great significance. The important thing to know is whether consumers are getting more goods and services, not whether they are expending more dollars and cents.

The index of volume (Table 6) is based on the quantities of manufactured products reported. The industry indexes are weighted according to the values added by manufacture. The indexes for the years 1923-31 are based on the values added in 1926. The weights and products were changed in 1931, 1936 and then again in 1941. By changing the weights and products used in the construction of the index every five years, current changes in production are thereby reflected more accurately.

The physical volume of manufacturing production increased 50.2 p.c. from 1923 to 1929. When it is recalled that the population of Canada is estimated to have increased only 11.1 p.c. during the same period, the growth of manufacturing production is indeed remarkable. Of this advance, the part resulting from an increase in the domestic demand due to growth of population would therefore be about 11.1 p.c. Exports of partly and fully manufactured goods increased from \$591,830,000 in the fiscal year ended Mar. 31, 1924, to \$686,876,000 in the fiscal year 1929-30, the increase in exports representing about 3.6 p.c. of the 1923 production. The remainder of the increase in production by 1929, or a margin equal to roughly 35 p.c. of the volume of manufactures of 1923, was, therefore, apparently absorbed by increases in capital equipment and by the rise in the standard of living of the population of Canada.

A similar analysis of the volume of manufactures since 1929 in relation to population and exports would show that the decline in the depression preceding the Second World War was due chiefly to reduced exports and a cessation in production of capital equipment. As a result of the expansion in production resulting from the demands created by the War, the physical volume of production in 1943 when production was at an all-time high increased by 76.6 p.c. since 1939 and by 85.1 p.c. since 1929. The chemical and allied products group, with an increase of 262.5 p.c., reported the greatest expansion in output since 1939. This was followed by the iron and its products group with an increase of 222.2 p.c., non-ferrous metal products 129.9 p.c., miscellaneous industries 68.0 p.c., non-metallic mineral products 55.6 p.c., animal products 40.4 p.c., textile and textile products 33.7 p.c., vegetable products 24.6 p.c., and wood and paper products 21.4 p.c. There was also an increase in the volume of consumer goods. As was to be expected, the increase was not so great as that for the output of equipment and supplies needed by the Armed Forces. Drink and tobacco increased by 50.5 p.c., food 26.8 p.c. and clothing 24.7 p.c.

In 1944 the index of the physical volume of production at 180.8 represented a drop of 3.7 p.c. from the high mark of the previous year. Chemicals and allied products had the sharpest decline of 14.2 p.c., followed by non-ferrous metal products with 10.1 p.c., iron and its products 8.5 p.c. and textiles and textile products 2.9 p.c. The vegetable, animal, miscellaneous industries, wood and paper and non-metallic mineral products groups on the other hand reported an increased volume of production. The volume of consumers' goods continued to rise with the drink and tobacco group reporting an increase of 14.9 p.c., food 8.7 p.c. and clothing 0.6 p.c. Industrial equipment and producers materials were both down with declines of 7.5 and 4.8 p.c. respectively. Vehicles and vessels also declined by 0.9 p.c.

6.—Indexes of the Volume of Manufacturing Production, According to Component Material and Purpose Classifications, 1923-44

(1935-39=100)

Year	COMPONENT MATERIAL CLASSIFICATION GROUPS

Section 3.—Production by Industrial Groups and Individual Industries.

For the purposes of the Census of Manufactures, the main detailed analysis is made under a classification in which industries are grouped according to the chief component materials of the goods manufactured. This is, therefore, the grouping used in Table 9, where the statistics of individual industries are presented in detail and in the historical series shown in Table 3. However, there are also less detailed analyses under purpose groupings given in Table 10 and under origin groupings in Table 12.

Subsection 1 —Manufactures Grouped by Chief Component Materials

A classification based on the chief component materials in the various products of each manufacturing establishment was applied for the first time in the compilation of the returns for 1920. The number of groups was reduced from fifteen to nine to

correspond with the external trade classification and the classes of industry were somewhat altered to conform with recent industrial developments. Subsequently, a number of minor changes were made, the most important being the elimination of central electric stations and the dyeing, cleaning and laundry industry from the compilation in 1936. Revisions due to these changes have been carried back to 1917 in so far as possible.

Recent Changes in Manufacturing Production—Table 8 shows the effects of the depression, the recovery since 1933, and the impact of the Second World War upon the main groups of industries with regard to the numbers employed, the salaries and wages paid, and the gross value of products. Owing to the price decline during the depression, money values of both wages and products were naturally affected more than number of employees. Furthermore, during periods of curtailed production there is a tendency for wage-earners to be put on part time, while the number of salaried employees responds less quickly to reduction in output than that of wage-earners. Therefore, there are several reasons why the variation in number of employees should be less than that of money values. The figures of Table 8 are to be compared with those of Table 6 which show changes in volume of production. Compared with 1939, the number of employees in 1944 increased by 85.8 p.c. as compared with an increase of 70.1 p.c. in the physical volume of production. Salaries and wages paid were 175.1 p.c. higher and the gross value of production 161.1 p.c. higher. Another significant change is the increase in the proportion of women engaged in manufacturing. Whereas in 1939, there were 281 females to every 1,000 males employed, in 1944 this figure jumped to 403.

8.—Percentage Variation in Employment, Salaries and Wages, and Gross Value of Products in the Main Industrial Groups Compared for Significant Years, 1929-44

NOTE.—The highest pre-depression year was 1929, while the lowest depression year was 1933.

Industrial Group	1933 Compared with 1929			1939 Compared with 1929			1944 Compared with 1939

Detailed Statistics by Groups and Individual Industries—Table 9 presents for the year 1944 detailed statistics regarding the individual industries under which all industrial plants in the Dominion are classified. The industries are further assembled under nine main groups according to the principal component material of their products.

In interpreting the statistics of individual industries it should be remembered that the figures on employment, production, etc., do not refer to individual products but to all the products made in an industry. For example, the value of production of the biscuit and confectionery industry amounted to \$86,011,499 in 1944 does not mean that this was the value of biscuits and confectionery produced. What it means is that the firms whose principal products were biscuits and confectionery had a value of production of \$86,011,499. This figure, in addition to biscuits and confectionery, includes all the subsidiary products made by these firms, such as ice cream, which was valued at \$1,558,335, and bread and other bakery products amounting to \$4,092,076. Biscuits and confectionery are also produced as subsidiary products by firms credited to other industrial classifications. The bread and other bakery products industry, for example, reported an output of \$270,401 worth of biscuits while the miscellaneous food industry reported \$221,990 worth of confectionery. To obtain total production figures for individual products reference should be made to Appendix II of this report "Alphabetical List of Products Manufactured in Canada".

The incidence of the War resulted in a rearrangement in the rank of many industries. Industries producing supplies and equipment for the Armed Forces naturally advanced while those industries producing for the domestic consumer market declined in importance. To supply the raw materials needed by the industries engaged principally in war production, it became necessary to restrict or prohibit the manufacture of many products such as pleasure cars, radios, washing machines, electrical equipment, household appliances, agricultural implements, etc. Though these industries were forced to change over to wartime production, the changes did not affect the value of their output and consequently their importance as producers of manufactured goods did not alter drastically. To analyse the effects of the War on any industry, it is necessary to compare the nature of the products made before the War with that of the present. This should be borne in mind in making industrial comparisons with pre-war years. For example, the number of employees engaged in the agricultural implements industry increased by 7,196 between 1940 and 1944; this in spite of the fact that the output of agricultural implements remained at about the same level. The increase was due to a change-over of some of the plants to war production. It is therefore impossible to trace industrial trends from the principal statistics alone, as published in this report.

Subsection 2—Manufactures Classified by the Purpose of the Products

Significant changes have occurred since 1922 in the importance of the various groups shown in the purpose classification. On the basis of percentage to gross value of production, the most striking change is in the food group which showed a substantial decline from 28.2 p.c. of the total in 1922 to 22.6 p.c. in 1939 and 18.8 p.c. in 1944. The producer materials group, which took the lead from the food group in 1923, showed a steady increase up to 1939, since when it has remained at about 30 p.c. of the total. Due to the production of war equipment, vehicles and vessels increased from 7.7 p.c. in 1939 to 15.7 p.c. in 1944 and industrial equipment from 15.2 p.c. to 16.7 p.c. The other groups with the exception of "miscellaneous" showed slight declines during the war years.

10.—Principal Statistics of the Manufacturing Industries of Canada, Classified According to the Purpose of the Principal Product, by Main Groups, Significant Years 1922-44 and in Detail for 1941.

¹ For the year 1922 the figures for "Cost of Materials" and "Gross Value of Products" include the value placed on intermediate products used in further processes in the chemical group of industries. For this reason these figures differ slightly from those contained in the other tables of this report.

Table 11 has been included in order to give the amount and value of each of the principal commodities produced by the manufacturing industries of Canada. The list is not intended to be complete since a large number of commodities are produced in such small quantities that it would extend the table considerably without adding proportionately to its value to include them. The commodities listed, however, cover approximately 75 p.c. of total production. For a complete list of products, see Appendix II of this report.

11.—Quantities and Values of the Principal Commodities Produced by the Manufacturing Industries of Canada, Grouped by Purpose, 1944

	Unit of Measure	Quantity	Value
			\$
Food—			
Biscuits, all kinds.....	ton	75,146	25,154,523

Subsection 3.—Manufactures Classified by Origin of the Materials

The distinction made between farm materials of Canadian and foreign origin is based on whether the materials are indigenous to Canada rather than on their actual source. Thus, the industries included in the foreign origin classes are those depending upon materials that cannot be grown in Canada, such as tea, coffee, spices, cane sugar, rice, rubber, cotton, etc. Industries included in the Canadian origin classes may, however, be using large quantities of imported materials.

The mineral origin group includes, in addition to the non-ferrous metals, so largely produced in Canada, the manufactures of iron and steel, of petroleum, and of other mineral substances, the raw materials for which are very largely imported. Products of mineral origin, with the exception of fuels, are nearly all durable goods. A high standard of living and advanced industrial organization is usually indicated by a relatively large production and consumption of mineral products. During periods of depression when the production of capital goods is curtailed, employment in the industries of the farm group, which produce mainly consumer goods, exceeds that of the mineral group. For 1943 the averages for capital and salaries and wages were \$4,417 and \$1,297 respectively for the industries of the farm origin. Average salaries and wages in 1944 totalled \$1,905 for the mineral origin group and \$1,372 for the farm origin group.

¹ For the year 1924 the figures for "Cost of Materials" and "Gross Value of Products" include the value placed on intermediate products used in further processes in the chemical group of industries. For this reason these figures differ slightly from those contained in the other tables of this report.

Electrical apparatus and supplies.....	8	9	9	9	8	16	8	17
Miscellaneous iron and steel products.....	9	5	12	—	—	—	—	—
Butter and cheese.....	10	11	8	4	6	5	6	5

A prominent feature of Canadian manufacturing development in recent years has been the rapid growth of non-ferrous metal smelting. This industry, based upon the rich base metal resources of the country, has now taken its place among the leading manufactures along with the industries based upon forest, agricultural and live-stock resources. The incidence of the depression resulted in a rearrangement in the ranking of many industries; in some cases this has proved to be temporary. Under the impetus of war production, the industries engaged in producing the equipment needed by the Armed Forces, such as shipbuilding, aircraft, automobiles, miscellaneous chemical products, and primary iron and steel, advanced to higher positions. With the minor decline in the production of war equipment during 1944, the food industries, by reason of the continuing demand for their products, bettered their position; slaughtering and meat packing advancing from third to first place and butter and cheese from eleventh to tenth place.

13.—Principal Statistics of the Forty Leading Industries of Canada, Ranked According to Gross Value of Products, 1943

Primary textiles ¹	613	77,816	96,743,445	194,509,683	174,820,999	378,075,214

¹ On a broader classification basis, the primary textile industry, which includes the production of cottons, woollens, silk, hosiery and knitted goods, and the dyeing and finishing of textiles, ranks second in number of employees, third in salaries and wages paid and fifth in gross value of production.

Section 4.—Principal Factors in Manufacturing Production

The subjects treated under this Section, in as much detail as limitations of space permit, include capital, employment, salaries and wages, size of establishments and power and fuel used in manufacturing.

Subsection 1.—Capital Employed

The remarkable increase in capital employed in Canadian manufactures from the beginning of the twentieth century has, of course, run parallel with the rapid growth in industrial operations. From 1900 to 1905 the capital increased from \$446,900,000 to \$833,900,000, and advanced to \$1,958,700,000 in 1915. During this period returns were received from establishments with 5 hands or over, and, while the rise in wholesale prices did not exceed 37 p.c., the capital employed in manufactures increased nearly 340 p.c.

The capital investment in 1943 in all establishments, irrespective of the number of employees, but exclusive of central electric stations, was \$6,317,000,000 as compared with \$2,334,000,000 in 1917, an increase of 171 p.c. while wholesale prices have declined about 13 p.c. in the same period.

Statistics on capital employed were discontinued in 1944.

15.—Percentage Distribution of Capital Employed in the Manufacturing Industries by Provinces and Industrial Groups, Significant Years, 1917-43

Statistics on capital employed were not collected for 1944.

Subsection 2.—Employment in Manufactures

Using a base and taking the percentages of the wage-earners and the total employees in each year, and dividing these percentages into the corresponding volumes of manufacturing production (see p. 16 for the index of volume), tentative

conclusions are arrived at regarding the efficiency of production per wage-earner and per employee. These indexes of the efficiency of production are, of course, affected by the changes in the method of computing the number of wage-earners adopted in 1925, and then again in 1931. Inasmuch as the change increased the apparent number of employees between 1925 and 1930, it proportionately decreased the index of the efficiency of production. Comparability exists, however, between the figures prior to 1926 and subsequent to 1930. Table 17 shows only the latter period. Unfortunately, the period covered is rather limited for the purpose in view, but it is suggested that the reader compare these data with the comparable figures for 1917-30 at p. 421 of the 1939 Canada Year Book. Up to the beginning of the Second World War the indexes may be considered as supplying satisfactory evidence of a general gain in volume of production per person employed. With the outbreak of war unemployed skilled workers were first absorbed into industry, with the result that the efficiency of production was slightly bettered. As the War progressed, however, manufacturers were forced more and more to employ unskilled workers. The decline in the efficiency of production in 1942, 1943 and 1944 may, therefore be attributed to this cause as well as to absenteeism for various causes.

17.—Salaried Employees and Wage-Earners in Manufacturing Industries, with Volume of Manufacturing Production and Comparative Efficiency of Production, 1931-44.

(1935-39=100)

NOTE.—Figures, with qualifications as to comparability, for 1917 to 1930 are published at p. 421 of the 1939 Canada Year Book.

Monthly Record of Employment in Manufactures.—Ordinarily, manufacturing employment in Canada reaches its highest point during the summer months. Some of the seasonal industries, such as canning, are most active then, textile industries are preparing winter goods, and industry generally feels the active demand of the agricultural purchasing power resulting from the prospect of the season's harvest. After the setback of 1929, employment in 1930, 1931, 1932 and the first half of 1933 declined steadily, the monthly employment figures in each case being lower than the corresponding month of the previous year. The peak of employment in June, 1929, when 575,693 wage-earners were on the payrolls, was surpassed in September, 1937, with 582,305 wage-earners. With the outbreak of war the improvement in employment became increasingly rapid. A new high record was attained in August, 1943, when 1,067,890 wage-earners were employed, an increase of 96.4 p.c. over the same month in 1939. The highest employment

during 1944 was attained in June when 1,049,557 wage-earners were employed. From then on employment declined steadily to the end of the year when 961,820 wage-earners were reported. This compares with an employment of 1,021,630 wage-earners in December 1943 and 992,880 wage-earners in December 1942.

Hours Worked by Wage-Earners.—From 1932, the first year for which figures on hours worked per week by wage-earners are available, to 1944, each firm was required to report the number of hours worked by all its wage-earners during the month in which the greatest number had been employed, the only exception being the years 1938 and 1939 when one week in a month of normal employment was reported. In 1938 the number of hours worked per week were compiled by sex, and a change was also made in the analysis of the weekly hours worked. Since 1940 the hours worked per week include overtime while prior to that overtime was excluded. These changes make it impossible to measure accurately the changes in the number of hours worked per week. In any case, the figures in Tables 19 to 22 do not refer to any particular month, since the month of highest employment might be May for one firm and October for another; they represent the summation of the different months of highest employment as reported by all firms. For a given industry, however, the month of highest employment is more significant as in this case it coincides for a great number of firms engaged in the same industry.

For all wage-earners, the hours worked per week declined from 48.9 in 1932 to 47.2 in 1939, and reached 50.6 in 1941, some of this increase no doubt being due to the inclusion of overtime. For 1942, 1943 and 1944 there was a counter movement in the hours worked, especially among females, due to the employment of many workers on a part-time basis. Whereas in 1939 there were only 2.8 p.c. of the male and 5.3 p.c. of the female wage-earners working under 30 hours per week, in 1944 these percentages rose to 5.3 p.c. and 12.5 p.c. respectively. Also the number of hours worked by females averaged 5.5 less than the number of hours worked by their male co-workers.

19.—Wage-Earners in Manufacturing, Working Specified Numbers of Hours¹ per Week in the Month of Highest Employment, 1938-44

NOTE.—Hours worked per week in 1932-37 are given at p. 386 of the 1942 edition of the Canada Year Book; in 1940 at p. 392 of the 1943-44 edition.

¹ Includes overtime.

² Figures are exclusive of those for "butter and cheese" and "fish curing and packing", which are among the leading industries. Figures for these industries are not available.

Subsection 3.—Salaries and Wages in Manufacturing Industries

In 1944 the 28,483 establishments covered, employed 192,558 salaried employees and 1,030,324 wage-earners, a total of 1,222,882 persons. Out of every 1,000 persons employed in manufacturing 157 were classed as salary earners and 843 as wage-earners; the former earned 20.6 p.c. and the latter 79.4 p.c. of the total amount paid out as remuneration for services.

A notable feature during the past few years was the reduction in the disparity between average annual salaries and wages. Whereas in 1939 average annual wages were only 55.8 p.c. of average annual salaries, in 1943 the percentage rose to 75.8 and declined to 72.0 in 1944. This tendency towards equalization was, in part, due to the controls adopted by the Government which tended to stabilize salaries more so than wages. The increase in average wages was also influenced by the fact that large numbers of wage-earners were employed in the highly paid iron and steel industries and by the increase in number of hours worked, some of it at overtime pay.

Ontario has a larger proportion of females among its salaried employees than the other provinces. The same situation prevails in Quebec with regard to wage-earners, due, no doubt, to the textile industries of the Province. The importance of the textile industries in providing employment to females is strikingly illustrated by the fact that of all female wage-earners engaged in the manufacturing industries of Canada in 1944, 29 p.c. were found in the textile group. Normally the percentage is much higher. In 1942 to 1944 large numbers of female wage-earners were employed in the aircraft and miscellaneous chemical industries. For this reason the percentage employed in the textile industries declined.

The average salary in 1944 amounted to \$2,171 which was \$425 or 24.3 p.c. higher than in 1939. Salaried employees in Ontario with \$2,273 received the highest salary. British Columbia came second with \$2,190 and Quebec third with \$2,159. The fact that head offices of many large corporations are located in Montreal, Toronto, Vancouver and Winnipeg tends to raise the average salaries in the provinces in which these cities are located.

¹ The Averages of wage-earners and earnings for the years 1931 to 1943 are strictly comparable with those for the years up to 1925 but not with those for the intervening years. The figures for the latest years—as for the earliest—represent the earnings for complete man-years of work, with no allowance for periods of unemployment. The difference amounts only to about 3 or 4 p.c. in the total figures and affects chiefly the seasonal industries.

² The increase in the number of salaried employees in 1931 is due to the following changes in method: (1) Prior to 1931 working proprietors, such as bakers, sawmill operators, small clothing manufacturers, etc., were required to report themselves as wage-earners. In 1931 and subsequent years, however, all such proprietors reported themselves as salaried employees. (2) In 1931 travelling salesmen who were attached to the plant, and devoted all or the greater part of their time to selling the products of that plant, were included with salaried employees. Prior to this they were not reported at all.

¹ For statistics of annual earnings of wage-earners, by sex, see Table 26.

The average wage in 1944 amounted to \$1,564 which was \$589 or 60.4 p.c. higher than in 1939. The manufacturing industries of British Columbia paid the highest average wages of \$1,809 per annum, followed by Ontario with \$1,618, Nova Scotia \$1,570, Quebec \$1,473, Manitoba \$1,452, etc. The high figures shown for Yukon and the Northwest Territories in regard to average wages are due to the unusual conditions under which industry is carried on in these regions and are not representative. Statistics of the distribution of employees by province and groups as well as average annual earnings are given in Table 23, and for a subdivision of wage-earners by sex, see Table 26.

Average Annual Earnings in the Forty Leading Industries.—In only nine industries did average salaries exceed \$2,500 in 1944; pulp and paper, bridge and structural steel, breweries, automobiles, petroleum products, men's factory clothing, railway rolling-stock, silk, and cotton yarn and cloth. In twenty-four they ranged between \$2,000 and \$2,500, in four they ranged between \$1,500 and \$2,000, and in the remaining three they were below \$1,500. The lowest salaries were reported by the sawmilling, butter and cheese, and bread industries, each of which includes a large proportion of small establishments.

The highest annual wages, those above \$1,900, were paid in nine industries, in all of which the proportion of skilled workers is high and the proportion of female workers is low. The automobile industry with \$2,347 was the highest in this group, followed by bridge and structural steel with \$2,111, shipbuilding and repairs \$2,055, railway rolling stock \$2,010, aircraft \$1,998, miscellaneous iron and steel products \$1,983, petroleum products \$1,953, primary iron and steel \$1,930, and scientific and professional equipment \$1,923. In twelve other industries average wages ranged between \$1,600 and \$1,900 in all of which the proportion of female workers is low. In fifteen other industries average wages ranged between \$1,100 and \$1,600, while in the remaining four they were below \$1,100. The latter group includes industries made up of a large number of small establishments and in which the proportion of female workers is high. Fruit and vegetable preparations, biscuits and confectionery, hosiery and knitted goods, and leather boots and shoes are the industries included in this group. Employment by sex and average annual earnings in the forty leading industries is given in Table 24, and the annual earnings by sex in Tables 27 and 28.

24.—Salaries and Wages Paid in the Forty Leading Industries, 1944, with Comparative Figures of Average Salaries and Wages Paid in 1943

NOTE.—Industries ranked according to the aggregate salaries and wages paid. For a subdivision of annual earnings of wage-earners, by sex, see Tables 27 and 28.

Average Annual, Weekly and Hourly Earnings.—In comparing earnings by provinces or groups, consideration should be given to the type of industries in each case since the distribution of industries has very definitely a regional significance. In some industries a labour force possessing deftness and speed or the ability to exercise muscular strength is necessary, in others the labour force must exercise craftsmanship or possess a high degree of technical knowledge. Workers in these latter industries naturally command relatively higher wages than those employed in industries whose employees are routine workers.

The ranking of provinces and industries as regards annual earnings is in many cases different to that of weekly or hourly earnings since the factors of number of weeks worked per year and number of hours worked per week enter into the picture. So that, while in general the same observations apply, a close study of the differences between the averages shown in Tables 23 and 24 will be of value to the student.

The figures given in Tables 25 to 28 are based on an analysis of a pay-list covering one week in the month of highest employment. For this reason the figures do not refer to any particular month, since the month of highest employment might be May for one firm and October for another; they represent the summation of the

different months of highest employment as reported by all the firms. For a particular industry, however, the month of highest employment is more significant as in such case it coincides for a great number of firms engaged in the same industry.

Average weekly earnings of male wage-earners for manufacturing as a whole amounted to \$34.95 in 1944, an increase of \$12.72 or 57.2 p.c. as compared with 1939. Average hourly earnings advanced from 46.2 cents in 1939 to 71.2 cents in 1944, an increase of 54.1 p.c. Annual earnings at \$1,761 were 63.7 p.c. higher than in 1939.

Female wage-earners received on an average \$20.89 per week in 1944, an increase of \$8.11 or 63.5 p.c. as compared with 1939. Hourly earnings at 47.9 cents were 69.2 p.c. higher, while annual earnings at \$1,051 were 69.8 p.c. higher.

Real Earnings of Employees in Recent Years.—When the index number representing the average yearly wages is divided by the index number of the cost of living, on the same base, a measure of "real" wages is obtained. Index numbers for 1931 to 1944 are given in Table 29. In 1933, the height of the depression, real wages were 88.3 on the 1935-39 base. From then on they rose steadily and stood at 141.1 in 1944, an increase of about 60 p.c.

29.—Average Yearly Earnings, and Index Numbers of Earnings, Cost of Living and Real Wages of Wage-Earners, in Manufacturing Industries, 1931-44

NOTE.—Figures on the 1917 base, with qualifications as to comparability, for 1917 to 1930 are published at p. 421 of the 1939 Canada Year Book.

Percentages of Salaries and Wages to Net Value of Products.—Table 30 shows the relation between salaries and wages paid by manufacturers and the total net value of production. Figures of gross production are often used in such calculations, but the values out of which the wages of employees must come in the long run are the values added to the raw materials while they are in the factory. Such added values constitute the real production of the manufacturing plant and are alone available for payment of salaries and wages, interest, rent, taxes, repairs, and all other overhead charges that ordinarily must be met. The percentage declined steadily with the increasing manufacturing production from 1924 to 1929, while from 1931 to 1935 and again in 1938 and 1939, due to decreased industrial activity, the percentage of salaries to value added was above normal. It should be borne in mind, however, that salaried employees increased 175 p.c. during the period 1924-44 while wage-earners increased but 147 p.c. The percentage of wages has fluctuated much less than that of salaries. The number of wage-earning employees may be more rapidly adjusted to the activity of the industry and wage levels likewise may be more readily adjusted to the price levels of the products. Of the increase in the net value of production since 1939 amounting to \$2,484,724,109, \$1,291,810,217 or 52.0 p.c. was passed along in increased salaries and wages.

¹ Equivalent to "net value of products"; see footnote 1, Table 1, p. 7.

Subsection 4.—Size of Manufacturing Establishments

The size of the manufacturing establishment is generally measured either by the value of product, or by the number of employees, but each of these methods has its limitations. The latter takes no account of the differences in capital equipment at different times or in various industries and obviously the increased use of machinery, as in the flour-milling industry, may lead to an increase in production concurrently with a decrease in the number of employees. The former measure has to be adjusted for changes in the price level; and, as between industries, it makes those in which the cost of raw materials is relatively high, appear to operate on a larger scale.

Size as Measured by Gross Value of Products.—While in 1922 the 420 establishments each producing over \$1,000,000 had an aggregate value of products of \$1,268,056,129 or 51 p.c. of the total production of all manufacturing industries, the 719 establishments producing over \$1,000,000 each in 1929 had an aggregate value of products of \$2,516,064,954, or 62 p.c. of the grand total for all manufacturing establishments—a very significant change in the short period of eight years. In 1931, however, the number of plants with a production of over \$1,000,000 dropped again to 482, their output being valued at \$1,451,658,954, or 53 p.c. of the total. With the increased production resulting from war needs, the number of plants with a production of \$1,000,000 or over jumped to 1,376 in 1944, and their output was about 75 p.c. of the total value of manufactures.

of Yukon and the Northwest Territories.

² Exclusive

Size as Measured by Number of Employees.—In 1923, establishments employing 501 hands or over accounted for 21.4 p.c. of the total number of employees engaged in manufacturing. By 1929 the proportion had increased to 27.3 p.c. of the total, thereby showing the increasing concentration of production into larger units. This tendency, however, was checked by the depression, the percentage having dropped in 1933 to 20.5 p.c. (central electric stations included). With the recovery in production since 1933 the percentage has risen again, and in 1939 stood at 25.6. The same also holds true for establishments employing 101 hands or over. In 1923 they employed 58.6 p.c. of the total, in 1929, 61.9 p.c., in 1933, 55.7 p.c., in 1939, 61.5 p.c.

The impact of the War on the concentration of war industries into large units is illustrated by the increase in the number of establishments employing 500 hands or over. In 1939 such establishments numbered 172 and employed 25.6 p.c. of the total number of employees engaged in manufacturing. By 1944 the number had increased to 383 and the percentage of total employees to 47.0. In a further subdivision of this group in 1944 it was found that 226 establishments employed between 500 and 999 persons, 56 between 1,000 and 1,499, and 101 employed over 1,500. All told there were twelve plants employing over 7,000 persons. The largest one had an employment of a little over 13,000 with the next three largest employing between 9,000 and 10,000. Three other plants employed between 8,000 and 9,000 persons while the lowest five plants in this group employed between 7,000 and 8,000 workers.

¹ Includes central electric stations, dyeing, cleaning and laundry establishments. ² Exclusive of Yukon and the Northwest Territories.

Size of Establishment in Leading Industries.—Table 34 summarizes the degree of concentration in some of the leading industries of Canada. Concentration is extremely marked in the case of automobiles, railway rolling-stock, aircraft, cotton yarn and cloth, shipbuilding and repairs, miscellaneous chemical products, non-ferrous metal smelting and refining, and pulp and paper; whereas in the case of bread and other bakery products, women's factory clothing, butter and cheese, and sawmills, the degree of concentration is low. This concentration is analysed in detail for each of the twenty-five leading industries in the tables following.

34.—Percentage Importance of Establishments, each Employing 200 or more Persons in the Twenty-Five Leading Industries, 1944

Industry	Number of Such Establishments	Percentage of Total Number in the Industry	Percentage of Total Production in the Industry
1 Slaughtering and meat packing.....	27	17.6	79.8

Subsection 5.—Power and Fuel

Power.—Power equipment installed in manufacturing establishments is a very good barometer of the industrial development of Canada, inasmuch as production is increasingly dependent on power equipment. Increases and decreases in productive capacity, measured in horse-power, are not the result of temporary fluctuations in costs and values in the same manner as capital investments, values of products, etc. Of course, power equipment installed is not a measure of the actual utilization of power for there is generally an excess over actual requirements, i.e., over power equipment in operation. Producers must have an installed operating margin in excess of normal requirements to provide for booming business conditions or break-down of part of the plant; in times of depression this margin increases. Then, too, the practice in factories, etc., of installing individual motors to each machine in place of large central motors increases total installed capacity. If spare or idle machinery could be deducted from total installation over a long period of time, the resultant data would be more informative. Reports of such spare or idle equipment are available, however, only since 1934, and the percentage of equipment not in regular use has been approximately the same each year, viz., about 6 p.c. Power equipment figures, unless such deductions can be made over a long term, will not reflect temporary depressions.

Electric motors in the manufacturing industries operated by purchased power are included with primary power equipment and consequently the central electric stations producing the power are not included as manufacturing industries. Electric motors operated by power generated within these industries are not included in Table 36 with the primary power equipment that produces the power to operate them but they are shown separately, together with the total of all electric motors for each year. These totals indicate the rate of growth of electric drive in these industries in Canada, which has increased from 61.3 p.c. of the total power equipment in 1923 to 80.6 p.c. in 1944.

Of the total increase in power equipment employed in manufacturing industries since 1923, over 80.5 p.c. was in electric motors operated on power purchased from central electric stations. However, some sections of Canada are not well provided with water power and in such sections primary power derived from steam engines or turbines, and internal combustion engines—which include all gasoline engines, gas engines (natural, coal, and producer gas), and compression-ignition engines—has

also increased rapidly during the period covered. During the period 1923-44 there was an increase of 24 p.c. in the capacity of water wheels, 83 p.c. in the capacity of steam engines, while the capacity of electric motors and internal combustion engines more than quadrupled during the same period.

In the Provinces of Prince Edward Island, Nova Scotia, New Brunswick, Saskatchewan, and Alberta, primary power produced from fuels is an important factor in power utilization.

Fuel and Electricity.—Fuel is used quite generally throughout the industrial field for the generation of power by means of steam and internal combustion engines. It is also used for the heating of plants, and for providing the heat necessary to some manufacturing processes. The most important industries where heat is applied to the materials to facilitate or accomplish the desired transformation are foundries and machine shops, brick, tile, lime, and cement-making, petroleum refining, the glass industry, distilleries, food preparation, rubber goods, etc. Fuel used for such heating purposes, as well as for power, is included in the figures of Table 37. In addition to the electricity used for ordinary power purposes, the figures include also the electricity used for heating boilers in the pulp and paper industry. Consumption of surplus energy in electric boilers increased rapidly during the years preceding the Second World War.

The figures of the table do not include coke charged to iron-blast furnaces or foundry cupolas. Neither do they include fuels that constitute the raw materials to be transformed as coal in the coke and gas industries and crude petroleum in the refining industry.

The value of fuel consumed increased 156 p.c. from 1924 to 1944. Electricity, on the other hand, has increased during the same period by 368 p.c., although there has been a decline in the average unit cost of electricity as there has been in the case of fuels. The groups of industries in which fuel was most extensively used in 1944 were: iron and its products, wood and paper products, non-ferrous metals and non-metallic mineral products.

Quebec is the largest user of electric power, having used 48.5 p.c. of the Dominion total in 1944.

PART II.—PROVINCIAL AND LOCAL DISTRIBUTION OF MANUFACTURING PRODUCTION

This part of the Report is introduced by a general analysis of the concentration of the manufacturing industries in the provinces. In the sections that follow, the principal features of the manufactures of each province are brought out and finally the distribution of manufacturing throughout the principal cities and towns of the Dominion is shown.

Ontario and Quebec are by far the most important manufacturing provinces of Canada. Their combined production in 1944 amounted to \$7,269,483,000 or over 80 p.c. of the gross value of manufactured products of the Dominion. The proximity of Ontario to the coalfields of Pennsylvania, the water power and other varied resources of the two provinces, and their nearness to the larger markets of Canada and the United States have all contributed to the above result.

Table 1 shows the outstanding predominance of Ontario and Quebec in each industrial group. Quebec leads in the manufacture of textiles and chemicals, but in each of the other groups Ontario has the greater production. The standing of these two provinces is most nearly approached by British Columbia in the case of the wood and paper products group, where the latter province accounts for 16.5 p.c. of the gross production compared with 35.7 p.c. for Ontario and 34.5 p.c. for Quebec; in each of the other groups the positions of Ontario and Quebec lead by a wide margin. Previous to 1941, Table 1 has shown the value of production in each province, by industry. With the establishment of many vital war plants throughout Canada, it is not possible to publish this detail and the provincial distribution by groups, instead of by industries is given. In this way the publication of figures relating to individual establishments has, in many cases, been avoided.

¹ Includes non-ferrous metals.

The degree of concentration of manufacturing production in large units is illustrated in Table 2. In the Province of Quebec 51.3 p.c. of all persons engaged in manufacturing were employed in establishments having 500 or more employees, as compared with 46.9 p.c. for Canada as a whole. Ordinarily, Ontario ranks second in concentration of manufacturing production. In 1942, however, British Columbia with 47.2 p.c. came second, this being due to the large shipbuilding plants located there. In 1944 Ontario resumed her normal position in second place with 47.3 p.c., while Nova Scotia came third with 45.8 p.c., followed by British Columbia with 45.2 p.c., Manitoba 35.7 p.c., New Brunswick 26.9 p.c., Alberta 24.3 p.c. and Saskatchewan 15.6 p.c.

Section 1.—The Manufactures of the Maritime Provinces, 1944

In Prince Edward Island the predominant agricultural and fishery resources make butter and cheese, fish-curing and -packing, and slaughtering and meat packing the leading manufactures of the Province. Nova Scotia is renowned for its coal mines and its fisheries, as well as extensive forests and agricultural lands and is favoured with easy access by sea to the high-grade iron-ore supply of Newfoundland. On these resources are based the leading manufactures of primary iron and steel, shipbuilding and repairs, fish-curing and -packing, sawmills, pulp and paper, and butter and cheese. In addition to this, important petroleum refineries and coke and gas plants add to the diversification of manufacturing in the Province. The forests of New Brunswick give a leading place to its pulp and paper and saw-milling industries, although fish and agricultural products add to the varied output. Sugar refining and the production of railway rolling-stock also form important branches of manufacturing production.

¹ Individual statistics cannot be given because there are fewer than three establishments in each industry. Such industries are: in Prince Edward Island; slaughtering and meat packing, planing mills, sheet metal products, fertilizers, cotton and jute bags; in Nova Scotia; cotton yarn and cloth, aircraft, miscellaneous iron and steel products, wire, coke and gas, and petroleum; in New Brunswick; sugar refineries, railway rolling-stock, cotton yarn and cloth, silk and artificial silk goods and veneer and plywoods.

Section 2.—The Manufactures of Quebec, 1944

Among the assets of Quebec that have tended to develop manufacturing industries in the Province may be mentioned its natural resources of forests, water powers, minerals, and agricultural lands, and also its geographic position astride the St. Lawrence estuary permitting sea-going shipping to reach its main centres of population. Added to these natural advantages, there is a stable and industrious population, which is an important factor in industries such as textiles, clothing, boots and shoes, etc., where a large labour force is required.

The most notable change among the manufactures of Quebec in recent years has been the development of the non-ferrous metal smelting industry. This industry first appeared among the forty leading industries of the Province in nineteenth place in 1927. It has been in second place since 1935, with the exception of 1942 when it was in first place.

Quebec, with about 32 p.c. of the Dominion output in 1944, was the second largest manufacturing province. The production of pulp and paper normally constitutes the dominant industry, but in 1943 and 1944 was displaced from the premier position by the miscellaneous chemical products industry and non-ferrous metal smelting and refining. In addition to accounting for about 6 p.c. of gross value of Quebec manufactures in 1944, the pulp and paper industry furnished about 50 p.c. of the Dominion total for this industry. The value of tobacco products totalled approximately 89 p.c. cotton yarn and cloth 75 p.c., women's factory clothing 67 p.c., leather boots and shoes 65 p.c., men's factory clothing 58 p.c., railway rolling-stock 53 p.c., and non-ferrous metal smelting and refining 51 p.c. of the Dominion totals of these products. Quebec is thus an outstanding manufacturing province by reason of her large individual industries and not so much on account of the great diversification of her industrial activity.

5.—Statistics of the Leading Industries of the Province of Quebec, 1944

Section 3.—The Manufactures of Ontario, 1944

The gross value of the manufactured products of Ontario in 1944 represented about 48 p.c. of the total for the whole Dominion, while that of Quebec amounted to about 32 p.c. This premier position in manufacturing has been fairly uniformly maintained by Ontario, as the following percentages show: 1926, 52 p.c.; 1918, 53 p.c.; 1910, 50 p.c.; 1900, 50 p.c.; 1890, 51 p.c.; and 1880, 51 p.c. In spite of the rapid industrial development in recent years in other provinces, such as Quebec, British Columbia and Manitoba, Ontario is maintaining a manufacturing production roughly equal to that of the remainder of the Dominion.

The geographic position of Ontario on the Great Lakes waterway system, by means of which the iron ore of Minnesota and the coal of Pennsylvania are readily accessible; the wide range of natural resources of forests, minerals, water powers, and agriculture; a large population and excellent water and rail transportation facilities to other parts of the country, have all encouraged industrial development. Other factors have been proximity to one of the most densely populated sections of the United States and the establishment within the Province of branch factories of United States industries, as in automobile manufacturing.

Industries producing capital or durable goods, which constitute an important factor in the manufactures of Ontario, were particularly hard hit during the early years of the depression preceding the Second World War. Thus, production was disproportionately curtailed in such important industries as automobiles, electrical equipment, machinery, agricultural implements, primary iron and steel, etc. This resulted in a lowering of the manufacturing production of the whole Province relatively to that of other provinces less affected by these influences. With the recovery since 1933 and the expansion in production resulting from the Second World War these industries in general have made good recovery, and Ontario, which accounted for 49 p.c. of the gross value of all products manufactured in the Dominion in 1933, had by 1942 increased the relative value to 50.5 p.c. In 1944 the percentage dropped again to 47.8, thus indicating a relatively greater expansion of war production in other provinces.

Ontario also has the greatest diversification of manufacturing production of any province. Outstanding among the industries in which this Province is pre-eminent are those of automobiles, agricultural implements and starch manufacture which are carried on practically in this Province alone. Other important industries in which Ontario leads, with the percentage which the production of each bears to that of the Dominion total, in 1944 are as follows: leather tanneries 86, rubber goods 85, primary iron and steel 70, electrical apparatus and supplies 64, iron castings 62, fruit and vegetable preparations 60, flour and feed mills 58, furniture 57, and hosiery and knitted goods 55.

Section 4.—The Manufactures of the Prairie Provinces, 1944

The leading industries of these Provinces are those based on their agricultural resources—their grain-growing, cattle-raising, and dairying areas. Next in importance, generally, are industries providing for the more necessary needs of the resident population, such as the baking of bread, printing and publishing, etc. The extensive railway services require large shops for the maintenance of rolling-stock, especially in the Winnipeg area. The widespread use of motor-vehicles and power machinery on farms has given rise to petroleum refineries in each province. The greatly increased production of crude petroleum in Alberta seems likely to lead to further development of the refining industry. Manitoba, as the early commercial centre of the prairies, has had a greater industrial development than either of the other provinces. Its natural resources of accessible water powers, forests, and, more recently, minerals, have given rise to quite a diversification of industrial production.

Considering the Prairie Provinces as an economic unit, slaughtering and meat packing had the largest gross value of production in 1944, amounting to \$273,197,731, followed by flour and feed mills with \$39,775,479, butter and cheese \$56,483,771, petroleum products \$42,472,090, railway rolling-stock \$24,394,795. These five industries accounted for about 60 p.c. of the total production of the Prairie Provinces. Other leading industries, in the order named, were: miscellaneous food products, bread and other bakery products, breweries, sawmills, etc.

¹ Other leading industries, individual statistics for which cannot be given because there are fewer than three establishments in each industry are: Manitoba, bridge and structural steel, non-ferrous metal smelting and refining and pulp and paper; Saskatchewan, non-ferrous metal smelting and refining, miscellaneous iron and steel products, aircraft and bags, cotton and jute; Alberta, cement, glass products, miscellaneous iron and steel products, primary iron and steel, wood preservation, malt and malt products, sugar refineries, acids, alkalies and salts and cheese, processed.

Section 5.—The Manufactures of British Columbia, 1944

British Columbia in 1944 was again the third most important manufacturing province of the Dominion. Normally its rich forests give the wood industries a pre-eminence in the Province. Due to the exigencies of the War which resulted in the establishment of a huge shipbuilding industry on the Pacific Coast, the iron and its products group displaced wood and paper as the dominant factor in British Columbia manufacturing production. As a result of this, the shipbuilding industry with a gross value of production of \$124,175,065 and accounting for 19 p.c. of the total output of the Province in 1944 was the dominant industry. This industry which rose from sixth place in 1940 when the output was valued at only \$9,943,941, reached its maximum expansion in 1943 when the output was valued at \$155,536,396 and the persons employed totalled 31,238. The operations of this industry declined during 1944, the gross value of production dropping by \$31,361,331 and the number of persons employed by 6,623. Emphasizing the importance of the forests in the industrial life of the Province, the sawmilling industry ranked second with a gross value of production of \$98,381,844, and the pulp and paper industry fourth with \$32,726,647. Third in importance was fish-curing and -packing, based principally on the estuarial salmon fisheries. British Columbia accounted for 48 p.c. of the total production of this industry in Canada. Other important industries were: slaughtering and meat packing, petroleum products, fruit and vegetable preparations, machinery, butter and cheese, etc. The varied resources of the Province and its position on the Pacific Coast have resulted in a wide diversification of its manufactures.

¹ Includes other leading industries, statistics of which cannot be published because there are fewer than three establishments in each industry. Such industries are: distilleries, sugar refineries, bridge and structural steel and non-ferrous smelting and refining.

Section 6.—Manufacturing Industries in Urban Centres

The prosperity of most of the cities and towns of Canada, especially in the east, is intimately connected with their manufacturing industries, which provide employment for a large proportion of their gainfully occupied population. In the west the cities are more largely distributing centres, though manufactures are rapidly increasing there also.

Table 9, indicating the extent to which the manufacturing industries of Canada are concentrated in urban centres, shows by provinces the proportion of the gross manufacturing production contributed by cities and towns having a gross production of over \$1,000,000 each. In the more highly industrialized provinces of Ontario and Quebec such cities and towns in 1944 accounted for 89.5 p.c. and 91.1 p.c., respectively, of the totals for those provinces, while in the Maritime Provinces and British Columbia, where sawmilling, fish-packing, and dairying are leading industries, the proportions fell to 70.9 p.c. and 77.5 p.c., respectively. In the Prairie Provinces manufacturing is confined largely to a few urban centres.

9.—Cities and Towns Each with a Gross Manufacturing Production of Over \$1,000,000. Number of Establishments and Total Production in such Urban Centres as a Percentage of the Grand Total, by Provinces, 1944.

NOTE—Statistics published in this table are in some cases higher than the figures published in Table 11, since, in the table below are included statistics of towns with less than three establishments and production of over \$1,000,000 each. It was not possible to publish this information, except in summary form in Table 11 without disclosing the operations of individual establishments.

Province	Urban Centres with a Gross Production of over \$1,000,000 each	Establishments Reporting in Urban Centres Producing over \$1,000,000 each	Total Production in Urban Centres Producing over \$1,000,000 each	Total Production in each Province	Production in Urban Centres as a Percentage of Total Production in each Province

¹ Net value is derived from gross value by deducting cost of materials, fuel, and electricity. For cost of fuel and electricity in 1944 see Table 11.

² Information not collected.

11.—Statistics of Manufactures of Municipalities, each with a Gross Production of \$1,000,000 or Over, and with Three or More Establishments, 1914

NOTE.—Statistics for cities and towns with three or more establishments cannot be published when one establishment has 75 p.c. or two establishments 90 p.c. of the total production.

APPENDIX II

Alphabetical List of the Products Reported as having been Manufactured in Canada in 1944

The appended list of the products of Canadian manufacturing industries presents the value and in most cases the quantity of the individual products in a much more detailed form. Prior to 1927, in presenting statistics of manufacturing production, the whole production of an establishment was taken as a unit. This not only prevented the presentation of production figures for specific products in detail, but also involved numerous inaccuracies in the production statistics of classes of commodities, owing to the fact that commodities which may be the major line of production in one establishment may also be products of secondary importance in another establishment where the major line of production puts the establishment into a different class. The statistics which follow, however, have been compiled by taking from the individual returns of each of the 28,483 manufacturing establishments covered, the value and, when given, the quantity of each commodity specified as produced by the establishment. In this way, detailed production figures are obtained for specific commodities and furthermore the total production of each commodity is brought together, no matter how varied may be the operations in different establishments producing it. Nevertheless it should be pointed out to those making use of these figures that there is one element of incompleteness about them. In the returns of many manufacturers, products of minor importance are grouped under the name "all other products". As will be seen from the group at the end of the list, the value of products not specified, while they may appear unimportant to the individual manufacturer, are, in the aggregate, a large amount, especially in the industries of the iron and steel group. It is obvious that one manufacturer may consider a product of insufficient importance to report separately for his establishment, while that same product may be reported separately by other establishments. In other words, included in the value of other products not specified at the end of the list, there are doubtless values which, had the products been specified by the manufacturer, would have been included in the values of commodities appearing on the list. However, the products not specified total only about 1.9 per cent in value of the whole manufacturing production, although in the iron and steel group this proportion is 4.0 per cent. With the exception of this group, therefore, the incompleteness of the figures on this account, is insignificant.

There is no duplication in the listing of products, nor do any of the items include products listed in more detail under another name. It is possible, however, that essentially the same commodity produced in different establishments may have been called by different names; in such a case, which is probably a very rare one, the items would appear separately in the following list.

LIST OF PUBLICATIONS, CENSUS OF MANUFACTURES; DOMINION BUREAU OF STATISTICS

Manufactures

- (1) General—General Report on the Manufacturing Industries of Canada with appendix giving Alphabetical List of Products Geographical Distribution of the Manufacturing Industries of Canada also Reports for the Provinces and Leading Cities; Quantity of Manufacturing Production in Canada, 1923-29. Weekly Earnings of Male and Female Wage-Earners in the Manufacturing Industries of Canada.
- (2) Manufactures of Vegetable Products—Biennial General Report on Manufactures of Vegetable Products. Annual Bulletins as follows: (a) Coffee, Tea, Spices and Miscellaneous Foods; (b) Fruit and Vegetable Preparations, including Canning, Evaporating and Preserving, and Pickles, Sauces Vinegar and Cider; (c) Flour and Feed Mill Products; (d) Bread and other Bakery Products; (e) Biscuits and Confectionery, including Cocoa and Chocolate; (f) Macaroni, Vermicelli, etc.; (g) Distilled Liquors; (h) Breweries; (i) Wine; (j) Rubber Goods, including Rubber Boots and Shoes; (k) Prepared Breakfast Foods; (l) Sugar Refineries; (m) Tobacco Products; (n) Vegetable Oil Mills; (o) Canned Foods; (p) Ice Cream; (q) Pack of Fruits and Vegetables, preliminary; (r) Aerated Waters; (s) Stock and Poultry Feeds; (t) Stocks of Unmanufactured Tobacco on hand, quarterly report; (u) Stocks of Canned Fruits and Vegetables, quarterly report.
- (3) Animal Products and their Manufactures—Annual Reports and Bulletins as follows: (a) The Dairy Factory Industry; (b) Processed Cheese; (c) Fish Processing (contained in annual Fisheries Statistics); (d) Slaughtering and Meat Packing and Sausage and Sausage Casings; (e) Leather Tanneries; (f) Leather Belting, Leather Boot and Shoe Findings and Miscellaneous Leather Goods; (g) Leather Boots and Shoes; (h) Leather Gloves and Mittens; (i) Fur Goods, Fur Dressing. Monthly Bulletin on Leather Footwear Production.
- (4) Textiles and Allied Industries—Biennial General Report on the Textile Industries of Canada. Annual Bulletins as follows: (a) Cotton Textiles (cloth, yarn, thread and waste); (b) Woollen Textiles (cloth, yarn, waste, carpets and woollen goods, n.e.s.); (c) Silk and Artificial Silk; (d) Men's Factory Clothing incl. Men's Furnishings; (e) Women's Factory Clothing; (f) Hats and Caps; (g) Hosiery and Knitted Goods; (h) Oiled and Waterproofed Clothing; (i) Cordage, Rope and Twine; (j) Corsets; (k) Cotton and Jute Bags; (l) Dyeing and Finishing of Textiles; (m) Awnings, Tents and Sails.
- (5) Manufactures of Forestry Products—Printed Bilingual Reports: (a) The Lumber Industry (biennial); (b) The Pulp and Paper Industry (biennial); (c) Wood-Using Industries (biennial); (d) Paper-Using Industries (biennial). Stencilled annual preliminary reports: (a) Lumber; (b) Pulp and Paper; (c) Wood-Using Industries; (d) Planing Mills and Sash and Door Factories; (e) Hardwood Flooring; (f) Furniture; (g) Printing Trades (Comprising the following industries: Printing and Publishing; Printing and Bookbinding; Lithographing; Engraving, Stereotyping and Electrotyping; Trade Composition and Blue Printing); (h) Paper Boxes and Bags; Stencilled biennial report: Lumber Distribution in Canada and the United States. Stencilled annual bulletins: (a) Boxes and Baskets; (b) Carriages, Sleighs and Vehicle Supplies; (c) Cooperage; (d) Coffins and Caskets; (e) Boatbuilding; (f) Lasts, Trees and Wooden Shoe findings; (g) Wood-turning; (h) Woodenware; (i) Excelsior; (j) Beekeepers' and Poultrymen's Supplies; (k) Wooden Refrigerators; (l) Miscellaneous Wood-Using Industries; (m) Roofing Paper; (n) Miscellaneous Paper Goods; (o) Veneer and Plywood. Mimeographed Monthly Bulletins: (a) Asphalt Roofing Production; (b) Asphalt Roofing Sales.

- (6) Iron and Steel and their Products—Biennial Report. Annual Bulletins as follows: Preliminary Summary on the Iron and Steel Industry. (a) Primary Iron and Steel; (b) Iron Castings; (c) Heating and Cooking Apparatus (except boilers and radiators); (d) Boilers, Tanks and Plate work; (e) Farm Implements and Machinery; (f) Machinery; (g) Automobiles; (h) Automobile Parts; (i) Bicycles; (j) Railway Rolling Stock; (k) Wire and Wire Goods; (l) Sheet Metal Products; (m) Hardware, Tools and Cutlery; (n) Bridge Building and Structural Steel Work; (o) Shipbuilding and Ship Repairs; (p) Aircraft; (q) Miscellaneous Iron and Steel Products. Commodity Bulletins on The production of Pig Iron; Steel; Washing Machines, Cream Separators; Warm Air Furnaces; Galvanized Sheets; Wire Nails; Steel Wire; Wire Fencing; Stoves, etc. Monthly Bulletins: (a) Pig Iron, Steel Ingots and Castings; (b) Steel Ingots; (c) Automobile Statistics*.
- (7) Manufactures of Non-Ferrous Metals—Biennial Report. Annual Bulletins as follows: Preliminary Summary on Manufactures of Non-Ferrous Metals. (a) Aluminium Products; (b) Brass and Copper Products; (c) White Metal Alloys; (d) Jewellery and Silverware; (e) Electrical Apparatus and Supplies; (f) Non-Ferrous Metal Smelting and Refining; (g) Miscellaneous Non-Ferrous Metal Goods. Quarterly Reports on Production and Sales of Radio Sets*, and Sales of Storage Batteries. Commodity Bulletins on the Production of Batteries; Silverware; Vacuum Cleaners; Electric Motors and Generators; Electric Transformers; Incandescent Lamps, etc.
- (8) Manufactures of the Non-Metallic Minerals — Biennial Report. Annual Bulletins as follows: Preliminary Summary on Manufactures of Non-Metallic Minerals. (a) Asbestos Products; (b) Cement and Cement Products; (c) Coke and Gas; (d) Glass Products; (e) Lime; (f) Petroleum Products; (g) Clay Products; (h) Salt; (i) Sand-lime Brick; (j) Stone; (k) Artificial Abrasives; (l) Gypsum and Gypsum Products; (m) Miscellaneous Non-Metallic Mineral Products, including Carbon Electrodes—Mica Products—Non-Metallic Minerals, n.e.s. Also special report on the consumption of Coke in Canada. Monthly bulletins on (a) Coke Statistics; (b) Sales of Manufactured and Natural Gas.
- (9) Chemicals and Allied Products—Biennial Report. Annual Bulletins as follows: Preliminary Summary on Chemicals and Allied Products; (a) Coal Tar Distillation; (b) Acids, Alkalies and Salts; (c) Compressed Gases; (d) Fertilizers; (e) Medicinal and Pharmaceutical Preparations; (f) Paints, Pigments and Varnishes; (g) Soaps, Cleaning Preparations and Washing Compounds; (h) Toilet Preparations; (i) Inks; (j) Adhesives; (k) Polishes and Dressings; (l) Hard Wood Distillation; (m) Miscellaneous Chemical Products, including Boiler Compounds; Plastic Products; Insecticides; Sweeping Compounds, Disinfectants; Matches; Dyes and Colours; Explosives, ammunition and fire-works; Chemical Products, n.e.s. Special Reports on the Fertilizer Trade in Canada. Commodity Bulletins on Sulphuric Acid, Ammonium Sulphate, etc. Special Report—Directory of Chemical Industries in Canada. Special Report on the Consumption of Chemicals in Municipal Waterworks.
- (10) Miscellaneous Manufactures—General Report. Annual Bulletins as follows: (a) Brooms, Brushes and Mops; (b) Musical Instruments (including pianos, organs and phonographs) and Musical Instrument Materials and Parts; (c) Buttons; (d) Bed Springs and Mattresses; (e) Sporting Goods.

Dominion Bureau of Statistics—General Manufactures Branch

OTTAWA, CANADA

Dominion Statistician: HERBERT MARSHALL.

Director, Census of Industry and Merchandising: W. H. LOSEE.

Chief, General Manufactures Branch: A. COHEN.

THE MANUFACTURING INDUSTRIES OF CANADA, 1945

Introduction

This report deals with manufacturing industries in Canada in two main Parts. Part I gives general analyses of manufactures in the Dominion including: the historical development of manufacturing in Canada in so far as statistical data are available; production by industrial groups and individual industries, i.e., a detailed treatment of current production under various groupings and individual industries; general analyses of the principal factors in manufacturing production under such sub-headings as capital, employment, salaries and wages, size of establishment, power and fuel. Part II deals with the provincial and local distribution of manufacturing production.

With regard to the first section of Part I, dealing with historical development, it is impossible to give absolutely comparable statistics over a long period of years. From 1870 to 1915 statistics were collected only in connection with decennial or quinquennial censuses, and there was inevitably some variation in the information collected. The annual Census of Manufactures was instituted in 1917 and, while numerous changes have been made since then in the information collected and the treatment of the data, an effort has been made to carry all major revisions, in so far as possible, back to 1917, so that the figures for the period since then are on a reasonably comparable basis.

The far-reaching influence of the War of 1914-18 was, of course, the outstanding factor in the growth recorded prior to the war now concluded. It was during these years that Canadian manufactures began to develop on a really large scale. Munitions contracts placed by the Imperial Munitions Board of Canada in those years totalled well over \$1,000,000,000 and these did not include such fields of production as shipbuilding and aviation. Shipbuilding construction alone during the War of 1914-18 amounted to \$35,000,000 in 1917, \$75,000,000, in 1918 and \$86,000,000 in 1919. In the same three years, employees in the shipbuilding industry numbered 12,000, 22,000 and 25,000, respectively.

Canada's effort in the Second World War brought manufacturing production to a much higher level than ever before. The tremendous increase in production during the war years is indicated by the increases in some of the main factors of production between 1939 and the highest point attained during the war. For manufacturing as a whole there was an increase of 161 p.c. in the gross value of production, 162 p.c. in the value added by manufacture, 89 p.c. in the number of persons employed, and 175 p.c. in the salaries and wages paid.

As was to be expected, the industries producing the munitions and equipment needed by the armed forces would be the first to feel the effects of the cessation of hostilities. Consequently, the chemical and allied products group suffered the greatest decline in production, as measured by employment, with a drop of 25.8 p.c. in the number of persons employed. This was followed by the iron and its products group with a drop of 21.9 p.c.; non-ferrous metal products, 15.3 p.c.; and miscellaneous industries, 2.3 p.c. On the other hand, the industries producing food, clothing and other consumer goods reported increases in production. Employment in the wood and paper products group was 5.1 p.c. higher, followed by increases of 4.3 p.c. for the animal products group; 3.5 p.c. for vegetable products; 3.3 p.c. for textiles; and 3.0 p.c. for non-metallic mineral products.

Of the forty leading industries in 1945, the following reported substantial declines in the volume of production as measured by the number of persons employed. Employment in the aircraft industry declined by 41,760, miscellaneous chemical products 21,223, shipbuilding and repairs 18,958, miscellaneous iron and steel products 16,300, non-ferrous metal smelting and refining, 7,156, electrical apparatus and supplies 4,705, automobiles 4,584, brass and copper products 4,366, automobile supplies 2,976, scientific and professional equipment 2,618, hardware, tools and cutlery 1,458, and primary iron and steel 1,385.

The following industries reported expanded operations. Employment in the women's factory clothing industry increased by 2,165, pulp and paper 2,100, rubber goods 2,069, bread and other bakery products 1,515, boots and shoes, leather 1,458, printing and bookbinding 1,205, printing and publishing 1,170, butter and cheese, 813, hosiery and knitted goods 715, and railway rolling-stock 604.

Manufacturing establishments reporting in 1945 numbered 29,050. They furnished employment to 1,119,372 persons who received \$1,845,773,449 in salaries and wages. They also produced goods that had a selling value at the factory of \$8,250,368,866 from materials costing \$4,473,668,847. The value added by manufacture totalled \$3,564,315,899.

Geographically, the changes in manufacturing production during 1945 were as follows:

Percentage Variation, 1945 Compared with 1944

Province	Number of Employees	Salaries and Wages	Gross Value of Production
Canada	- 8.5	- 9.1	- 9.1
Prince Edward Island.....	+ 3.6	- 0.9	+ 8.2
Nova Scotia.....	-11.6	-13.7	- 2.3
New Brunswick.....	- 2.9	+ 0.2	+ 3.0
Quebec.....	- 9.5	- 9.1	-13.6
Ontario.....	- 8.2	- 9.5	- 8.6
Manitoba.....	- 6.3	- 4.7	- 3.6
Saskatchewan.....	- 6.0	- 4.5	- 4.4
Alberta.....	- 3.2	- 1.4	- 1.8
British Columbia.....	- 8.4	-10.2	- 4.1

PART I.—GENERAL ANALYSES OF MANUFACTURING IN THE DOMINION

Section 1.—Growth of Manufacturing in Canada

Subsection 1.—Production of Manufactured Products

This section gives a picture of the growth of manufacturing, in general, as shown by comparable principal statistics, i.e., establishments, capital, employees, salaries and wages paid, cost of materials, and values of products. Other useful comparisons are made in Table 4 and figures of consumption are given in Table 5. Tables 6 and 7 show volume comparisons.

1.—Historical Summary of Statistics of Manufactures for the Dominion, 1917-1945

NOTE.—Statistics of manufacturing from 1870 have been published, but between that year and 1917 they are not on a comparable basis to the series given below. They will be found in Table 1 in former editions of this report. Statistics of the non-ferrous metal smelting industries were included in manufactures for the first time in 1925.

Year	Estab- lish- ments	Capital	Em- ployees	Salaries and Wages	Cost of Materials	Net Value of Products ¹	Gross Value of Products

¹ In accordance with a resolution passed by the Conference of British Commonwealth Statisticians, 1935, the net value of production is now computed by subtracting the cost of fuel and electricity as well as the cost of materials from the gross value of the products. The figures for 1924 and later years have, therefore, been revised in accordance with this resolution. The revision could not be carried farther back as statistics for cost of electricity are not available for years prior to 1924.

² A change in the method of computing the number of wage-earners in the years 1925 to 1930, inclusive, increased the number somewhat over that which the method otherwise used would have given. In 1931, however, the method in force prior to 1925 was re-adopted. The figures for 1931 and later years are, therefore, comparable with those for 1924 and earlier years.

³ Not collected.

¹ See footnote 1, Table 1.² See footnote 2, Table 1.³ Information not collected.

The figures in Table 4 trace the tendencies in Canadian manufacturing industries as clearly as possible through the latest period of their development. In analysing statistics of production and materials used, it should be borne in mind that, due to the inflation of values from 1914 through the immediate post-war period and the drop in prices of commodities during the depressions following 1921 and 1930, the figures for these periods are not completely comparable. One very important figure, however, which shows the trend of development clearly, is concerned with the use of power. The total horse-power employed increased from 1,658,475 in 1917 to 6,606,651 in 1945, an increase of about 298 p.c. in 28 years. In the same period, horse-power per wage-earner showed an interrupted trend from 3.06 to 10.82 in 1933 and 9.46 in 1939. With the large increase in the number of wage-earners on war production, and the more efficient utilization of the equipment available, the horse-power per wage-earner dropped to 6.28 in 1944 and 7.11 in 1945. The significant feature is the increase in both the absolute figure of power employed and the averages per wage-earner during the depression years as compared with 1929, although the large numbers of persons again finding employment since 1933 reduced the averages for the years 1934 to 1937 and again for 1940 to 1945. Other interesting comparisons are the trend of value added by manufacture, per employee, and of average salaries and wages paid since 1929.

Subsection 2.—Consumption of Manufactured Products

One of the beneficial results of adopting the same classification for external trade and for production is exhibited in Table 5, where the value of commodities made available for consumption in Canada is derived from these statistics. For example, the value of all manufactured commodities made available in 1945 was \$7,015,471,944, a figure obtained by adding to the value of manufactured products the value of the imports of manufactured and partly manufactured goods and deducting the value of the exports.

In past years there have always been large amounts of manufactured animal, wood and non-ferrous metal products available for consumption in Canada with considerable surplus left for export. With the commencement of the War, however, it was necessary to export more and more of such goods to the United Kingdom, and while this was done mainly by increasing production, Government control of consumption at home grew stronger as the War advanced. In the case of manufactured vegetable products, the figures for 1945 showed large excesses of exports over imports for such products as cereal foods (including flour), canned and dehydrated vegetables, etc. Excesses of imports were chiefly confined to cocoa, tea, coffee and preserved fruits and fruit juices, in which cases domestic production cannot be substituted.

On balance, Canada, in the past, imported large quantities of iron and steel, textile and non-metallic mineral products in spite of large home production. The urgent requirements for munitions of war brought about an expansion of the iron and steel, chemical and non-ferrous metals industries that will enable Canada to meet most requirements for home consumption in the future.

¹ A change in the method of computing the number of wage-earners in the years 1925 to 1930, inclusive, increased the number somewhat over that which the method otherwise used would have given. There was, therefore, a proportionate reduction in the averages for 1925-30 per employee and wage-earner, as compared with what these averages would have been under the other method. In 1931, however, the method in force prior to 1925 was re-adopted. The figures for 1931 and later years are, therefore, comparable with those for 1924 and earlier years.

² Not collected.

¹Imports and exports of manufactured and partly manufactured goods for the years 1928 to 1938 are for the fiscal years ended Mar. 31 of the following years, while for 1939 to 1945 they are for the calendar year. Net imports are total imports less foreign products re-exported.

Section 2.—Value and Volume of Manufactured Products

Value of Manufactured Products.—In the interpretation of manufacturing values over a number of years, variations in the level of prices must be borne in mind, especially when such variations have been as great as those in the period since the annual Census of Manufactures was begun in 1917. The index number of wholesale prices in Canada, on the 1926 base, compiled by the Dominion Bureau of Statistics, stood at 114·3 in 1917, 155·9 in 1920, 97·3 in 1922, 95·6 in 1929, 67·1 in 1933, 84·6 in 1937, 75·4 in 1939 and 103·6 p.c. in 1945. Index numbers of the prices of fully or chiefly manufactured goods were: 113·5 in 1917, 156·5 in 1920, 100·4 in 1922, 93·0 in 1929, 70·2 in 1933, 80·5 in 1937, 75·3 in 1939 and 94·0 p.c. in 1945.

Volume of Manufacturing Production.—Since real income is ultimately measured in goods and services, the growth of the volume of manufacturing production, as distinguished from its value, becomes a matter of great significance. The important thing to know is whether consumers are getting more goods and services, not whether they are expending more dollars and cents.

The index of volume (Table 6) is based on the quantities of manufactured products reported. The industry indexes are weighted according to the values added by manufacture. The indexes for the years 1923-31 are based on the values added in 1926. The weights and products were changed in 1931, 1936 and then again in 1941. By changing the weights and products used in the construction of the index every five years, current changes in production are thereby reflected more accurately.

The physical volume of manufacturing production increased 50.2 p.c. from 1923 to 1929. When it is recalled that the population of Canada is estimated to have increased only 11.1 p.c. during the same period, the growth of manufacturing production is indeed remarkable. Of this advance, the part resulting from an increase in the domestic demand due to growth of population would therefore be about 11.1 p.c. Exports of partly and fully manufactured goods increased from \$591,830,000 in the fiscal year ended Mar. 31, 1924, to \$686,876,000 in the fiscal year 1929-30, the increase in exports representing about 3.6 p.c. of the 1923 production. The remainder of the increase in production by 1929, or a margin equal to roughly 35 p.c. of the volume of manufactures of 1923, was, therefore, apparently absorbed by increases in capital equipment and by the rise in the standard of living of the population of Canada.

A similar analysis of the volume of manufactures since 1929 in relation to population and exports would show that the decline in the depression preceding the Second World War was due chiefly to reduced exports and a cessation in production of capital equipment. As a result of the expansion in production resulting from the demands created by the War, the physical volume of production in 1943 when production was at an all-time high increased by 76.6 p.c. since 1939 and by 85.1 p.c. since 1929. The chemical and allied products group, with an increase of 262.5 p.c., reported the greatest expansion in output since 1939. This was followed by the iron and its products group with an increase of 222.2 p.c., non-ferrous metal products 129.9 p.c., miscellaneous industries 68.0 p.c., non-metallic mineral products 55.6 p.c., animal products 40.4 p.c., textiles and textile products 33.7 p.c., vegetable products 24.6 p.c., and wood and paper products 21.4 p.c. There was also an increase in the volume of consumer goods. As was to be expected, the increase was not so great as that for the output of equipment and supplies needed by the Armed Forces. Drink and tobacco increased by 50.5 p.c., food 26.8 p.c. and clothing 24.7 p.c.

In 1945 the index of the physical volume of production at 165.3 represented a drop of 11.9 p.c. from the high mark attained in 1943. Chemicals and allied products had the sharpest decline of 34.9 p.c., followed by non-ferrous metal products with 30.5 p.c.; iron and its products 24.6 p.c. and textiles and textile products 3.9 p.c. The vegetable, wood and paper, animal, non-metallic mineral, and miscellaneous industries groups on the other hand reported an increase in the volume of production. The volume of consumers goods continued to rise with the drink and tobacco group reporting an increase of 21.2 p.c., followed by books and stationery with 12.3 p.c., personal utilities 12.1 p.c., food 9.8 p.c., house furnishings 4.3 p.c., and clothing 1.3 p.c. Industrial equipment and producers materials were both down with declines of 18.8 and 11.5 p.c. respectively. Vehicles and vessels also declined 22.4 p.c.

Section 3.—Production by Industrial Groups and Individual Industries

For the purposes of the Census of Manufactures, the main detailed analysis is made under a classification in which industries are grouped according to the chief component materials of the goods manufactured. This is, therefore, the grouping used in Table 10, where the statistics of individual industries are presented in detail and in the historical series shown in Table 3. However, there are also less detailed analyses under the standard classification grouping given in Table 11, purpose groupings in Table 12 and under origin groupings in Table 13.

Subsection 1.—Manufactures Grouped by Chief Component Materials

A classification based on the chief component materials in the various products of each manufacturing establishment was applied for the first time in the compilation of the returns for 1920. The number of groups was reduced from fifteen to nine to

correspond with the external trade classification and the classes of industry were somewhat altered to conform with recent industrial developments. Subsequently, a number of minor changes were made, the most important being the elimination of central electric stations and the dyeing, cleaning and laundry industry from the compilation in 1936. Revisions due to these changes have been carried back to 1917 in so far as possible.

Recent Changes in Manufacturing Production.—Table 8 shows the effects of the depression, the recovery since 1933, and the impact of the Second World War upon the main groups of industries with regard to the numbers employed, the salaries and wages paid, and the gross value of products. Owing to the price decline during the depression, money values of both wages and products were naturally affected more than number of employees. Furthermore, during periods of curtailed production there is a tendency for wage-earners to be put on part time, while the number of salaried employees responds less quickly to reduction in output than that of wage-earners. Therefore, there are several reasons why the variation in number of employees should be less than that of money values. The figures of Table 8 are to be compared with those of Table 6 which shows changes in volume of production. Compared with 1939, the number of employees in 1944 increased by 85.8 p.c. as compared with an increase of 70.1 p.c. in the physical volume of production. Salaries and wages paid were 175.1 p.c. higher and the gross value of production 161.1 p.c. higher. Another significant change is the increase in the proportion of women engaged in manufacturing. Whereas in 1939, there were 281 females to every 1,000 males employed, in 1944 this figure jumped to 403.

8.—Percentage Variation in Employment, Salaries and Wages, and Gross Value of Products in the Main Industrial Groups, Compared for Significant Years, 1929-44

NOTE.—The highest pre-depression year was 1929, while the lowest depression year was 1933.

Industrial Group	1933 Compared with 1929			1939 Compared with 1929			1944 Compared with 1939		
	Em- ployees	Salaries and Wages	Gross Value of Pro- ducts	Em- ployees	Salaries and Wages	Gross Value of Pro- ducts	Em- ployees	Salaries and Wages	Gross Value of Pro- ducts
Vegetable products.....	-17.2	-28.5	-44.8	+ 9.2	+ 8.8	-15.8	+31.4	+ 76.4	+ 92.6
Animal products.....	-21.5	-25.2	-43.3	+ 2.5	+ 9.9	- 3.3	+ 35.8	+ 89.4	+136.4
Textile products.....	- 7.9	-23.3	-30.7	+16.5	+12.8	- 2.6	+ 26.5	+ 82.8	+ 99.1
Wood and paper products.	-36.1	-46.8	-52.9	-12.0	-14.0	-20.0	+ 31.0	+ 72.1	+ 88.6
Iron and its products.....	-48.6	-64.5	-72.6	-15.2	-22.2	-30.0	+240.3	+416.2	+359.1
Non-ferrous metals.....	-36.6	-48.4	-41.9	+11.8	+ 9.5	+46.7	+134.1	+206.5	+138.5
Non-metallic minerals.....	-42.0	-50.5	-42.8	-21.3	-22.8	- 9.4	+ 37.2	+ 86.7	+100.0
Chemicals.....	- 7.8	-17.2	-33.0	+35.3	+39.4	+15.2	+262.1	+335.3	+359.8
Miscellaneous products....	-22.6	-37.3	-52.9	+13.9	+ 4.7	-15.3	+108.0	+216.6	+251.4
Averages, All Industries.	-29.7	-43.9	-49.7	- 1.3	- 5.1	-10.5	+ 85.8	+175.1	+161.1

Significant changes in the nature of manufacturing production took place with the cessation of hostilities in 1945. As was to be expected, manufacturers began to change over from war to peace-time production almost immediately, with the result that industries engaged in producing the equipment and supplies needed by the armed forces reported a substantially lowered output while industries producing consumer goods materially stepped up their production. The changes which took place are summarized in Table 9.

9.—Percentage Variation in Employment, Salaries and Wages, and Gross Value of Products in the Main Industrial Groups, 1945 Compared with 1944

Group	Number of Employees	Salaries and Wages	Gross Value of Production
All Groups	— 8.5	— 9.1	— 9.1
Vegetable products.....	+ 3.5	+ 6.6	+ 6.5
Animal products.....	+ 4.3	+ 7.1	+ 1.8
Textiles and textile products.....	+ 3.3	+ 6.0	+ 3.3
Wood and paper products.....	+ 5.1	+ 7.6	+ 8.3
Iron and its products.....	—21.9	—22.1	—22.3
Non-ferrous metal products.....	—15.3	—13.4	—21.5
Non-metallic mineral products.....	+ 3.0	+ 1.9	— 2.5
Chemicals and allied products.....	—25.8	—22.9	—34.8
Miscellaneous industries.....	— 2.3	— 6.4	+ 1.1

Detailed Statistics by Groups and Individual Industries.—Table 10 presents for the year 1945 detailed statistics regarding the individual industries under which all industrial plants in the Dominion are classified. The industries are further assembled under nine main groups according to the principal component material of their products.

In interpreting the statistics of individual industries it should be remembered that the figures on employment, production, etc., do not refer to individual products but to all the products made in an industry. For example, the value of production of the biscuit and confectionery industry amounting to \$84,627,083 in 1945 does not mean that this was the value of biscuits and confectionery produced. What it means is that the firms whose principal products were biscuits and confectionery had a value of production of \$84,627,083. This figure, in addition to biscuits and confectionery, includes all the subsidiary products made by these firms, such as ice cream, which was valued at \$1,457,452, and bread and other bakery products amounting to \$4,872,653. Biscuits and confectionery are also produced as subsidiary products by firms credited to other industrial classifications. The bread and other bakery products industry, for example, reported an output of \$245,687 worth of biscuits while the miscellaneous food industry reported \$209,746 worth of confectionery. To obtain total production figures for individual products reference should be made to Appendix II of this report "Alphabetical List of Products Manufactured in Canada".
